

## CONTENTS

<i>Preface</i>	ix
<i>Participants</i>	x
<b>QSO Absorption Lines: Introduction</b>	1
W. L. W. SARGENT	
Introduction	1
Properties of the Heavy-Element Redshifts	2
Physical Properties of the Ly- $\alpha$ Clouds	3
Recent Developments on the Ly- $\alpha$ Forest	4
Origin of the Heavy-Element Redshifts	5
The Origin of the Ly- $\alpha$ Forest Lines	6
New Results on Clustering	6
QSO Absorption Lines and Large-Scale Structure	8
The QSO Pair Q2343+1229, Q2344+1225	8
Conclusions	9
References	9
Discussion — Colin Norman, Chair	10
<b>BAL QSOs: Observations, Models and Implications for Narrow Absorption Line Systems</b>	17
DAVID A. TURNSHEK	
Introduction	17
Observations	18
Model Properties	26
Relation to the Narrow Absorption Lines	36
Future Work	43
References	44
Discussion — E. Margaret Burbidge, Chair	46
<b>QSO Absorption Systems with <math>z_{abs} \simeq z_{em}</math></b>	53
C. B. FOLTZ, F. H. CHAFFEE, R. J. WEYMANN, S. F. ANDERSON	
3C 191 — An Historical Digression	53
Is There a Statistical Excess of Absorption Systems Near QSOs?	54
Do Strong Associated Systems Occur Preferentially in Radio Loud QSOs?	56
Is There a Dichotomy Between the Occurrence of BAL and Associated Absorption?	60
3C 191 Revisited	61
Speculations	62
References	65
Discussion — E. Margaret Burbidge, Chair	66

<b>The Ly-<math>\alpha</math> Forest: Observational Evidence for Line Evolution</b>	71
RICHARD W. HUNSTEAD	
Introduction	71
Historical Background	72
Recent Determinations of $\gamma$	75
The Inverse Effect	78
Distribution of Equivalent Widths	80
Evolution of Individual Clouds	82
Issues Requiring Further Observations	84
Conclusions	86
References	87
Discussion — John Bahcall, Chair	89
 <b>Properties of the Ly-<math>\alpha</math> Clouds</b>	 91
R. F. CARSWELL	
Introduction	91
Deriving Distributions	92
Cloud Properties	97
Conclusions	98
References	99
Discussion — John Bahcall, Chair	100
 <b>Absorption Lines and Galaxy Formation</b>	 107
MARTIN J. REES	
The Systems of High Column Density	107
Equilibrium and Confinement of Clouds	111
Photoionization of Clouds; z-Dependence of the UV Background	115
The Distribution of Column Densities f(N)	116
References	117
Discussion — John Bahcall, Chair	118
 <b>Properties of the Heavy-Element Absorption Systems</b>	 127
JACQUELINE BERGERON	
Introduction	127
The MgII and CIV Samples	128
Average Size of the Absorbers and Cosmological Evolution	129
Ionization Level	131
Photoionization Models	135
Heavy Element Abundances	138
Properties of Galaxies Giving Rise to MgII Absorption Systems	139
References	141
Discussion — Alec Boksenberg, Chair	143

<b>High Resolution Observations of Heavy-Element Absorption</b>	147
J. CHRIS BLADES	
Introduction	147
Low Redshift Absorption: QSO-Galaxy Systems	149
Intermediate Redshift Systems: MgII Absorption	158
Absorption Systems at High Redshift	162
References	170
Discussion — Alec Boksenberg, Chair	173
<b>In Search of a Unified Description of the Narrow Absorption Line Systems</b>	179
DAVID TYTLER	
Introduction	179
Abundances	180
Column Densities	181
Ionization	182
Sheets or Spheres?	183
Evolution	184
Clustering	184
Interpretations	185
References	187
Discussion — Alec Boksenberg, Chair	188
<b>The Properties of the Gaseous Galactic Corona</b>	195
BLAIR D. SAVAGE	
Introduction	195
Distribution of the Gas	196
Ionization Characteristics of Milky Way Halo Gas	209
Elemental Abundances in Milky Way Halo Gas	211
Kinematics of Milky Way Halo Gas	212
The Origin of Galactic Halo Gas	214
Absorption by Milky Way Halo Gas and the Absorption Line Systems Seen in the Spectra of QSOs	217
References	220
Discussion — Donald Morton, Chair	223
<b>Analogy at Low Redshift for QSO Absorption Line Regions</b>	227
D. G. YORK	
Introduction	227
Description of Absorbers	227
Constraints on Halos	229
Star Forming Regions	230
Observational Tests	231
Galaxy Formation	233
References	234
Discussion — Donald Morton, Chair	235

<b>The Extent of Galaxies in 21 cm</b>	241
RENZO SANCISI	
Interacting Systems	241
Isolated Systems	244
References	250
Discussion — Donald Morton, Chair	251
<b>Evening Panel Discussion</b>	257
Discussion — Peter Shaver, Chair	257
<b>21 Centimeter Absorption Lines</b>	275
F. H. BRIGGS	
Introduction	275
The Nature of the 21 cm Line	276
The Redshifted 21 cm Line Absorbers	278
Unique Observations in the 21 cm Line	284
Conclusions	289
References	289
Discussion — David Jauncey, Chair	291
<b>Damped Ly-<math>\alpha</math> Absorption Systems</b>	297
ARTHUR M. WOLFE	
Introduction	297
The Lick Survey	298
Properties Directly Deduced from Accurate Spectroscopy	299
Other Physical Properties	302
Implications for Galaxy Formation	304
References	305
Discussion — David Jauncey, Chair	306
<b>QSO Absorption Lines and the Universe at Redshifts Between 1 and 4</b>	319
J. P. OSTRIKER	
Introduction	319
The Ly- $\alpha$ Clouds	320
The Proximity Effect	323
Shells, Voids and Correlations in the Ly- $\alpha$ Cloud Distribution	324
Metal Line Systems and Dust Obscuration	324
References	325
Discussion — David Jauncey, Chair	326
<b>Final Panel Discussion</b>	331
Discussion — Arthur Wolfe, Chair	331
