

# Contents

<b>1. Radio Astronomical Fundamentals</b>	1
1.1 On the Role of Radio Astronomy in Astrophysics	1
1.2 The Radio Window	3
1.3 Some Basic Definitions	4
1.4 Radiative Transfer	7
1.5 Black-Body Radiation and the Brightness Temperature	9
1.6 The Nyquist Theorem and the Noise Temperature	14
<b>2. Electromagnetic Wave Propagation Fundamentals</b>	15
2.1 Maxwell's Equation	15
2.2 The Energy Law and the Poynting Vector	16
2.3 Complex Field Vectors	18
2.4 The Wave Equation	20
2.5 Plane Waves in Isolating Media	21
2.6 Wave Packets and the Group Velocity	25
2.7 Plane Waves in Dissipative Media	27
2.8 The Dispersion Measure of a Tenuous Plasma	28
<b>3. Wave Polarization</b>	32
3.1 Vector Waves	32
3.2 The Poincaré Sphere and the Stokes Parameters	36
3.3 Quasi-Monochromatic Plane Waves	39
3.4 The Coherency Matrix	41
3.5 The Stokes Parameters for Quasi-Monochromatic Waves	44
3.6 Faraday Rotation	45
<b>4. Fundamentals of Antenna Theory</b>	50
4.1 Electromagnetic Potentials	50
4.2 Green's Function for the Wave Equation	52
4.3 Antennas for Electromagnetic Radiation. The Hertz Dipole	55
4.4 The Reciprocity Theorem	60
4.5 Descriptive Antenna Parameters	62
4.5.1 The Power Pattern $P(\theta, \varphi)$	62
4.5.2 The Main Beam	64
4.5.3 The Effective Aperture	66
4.5.4 The Antenna Temperature	68

<b>5. Filled Aperture Antennas . . . . .</b>	70
5.1 The Radiation Field of Localized Sources of Finite Extent . . . . .	70
5.2 Aperture Illumination and Antenna Pattern . . . . .	72
5.3 Circular Apertures . . . . .	74
5.4 Primary Feeds . . . . .	78
5.4.1 Dipole and Reflector . . . . .	78
5.4.2 Horn-Feeds . . . . .	80
5.4.3 Cassegrain and Gregorian Systems . . . . .	82
5.5 Antenna Tolerance Theory . . . . .	83
5.6 The Practical Design of Parabolic Reflectors . . . . .	87
5.7 Antenna Calibration . . . . .	92
5.8 The Confusion Problem . . . . .	95
<b>6. Interferometers and Aperture Synthesis . . . . .</b>	100
6.1 The Quest for Angular Resolution . . . . .	100
6.2 The Mutual Coherence Function . . . . .	101
6.3 The Coherence Function of Extended Sources: The van Cittert-Zernike Theorem . . . . .	102
6.4 Two-Element Interferometers . . . . .	105
6.5 Aperture Synthesis . . . . .	108
6.6 The Transformation of the Visibility Function . . . . .	114
6.7 Aperture Synthesis with Limited Phase Information . . . . .	118
<b>7. Receivers . . . . .</b>	123
7.1 Stationary Stochastic Processes . . . . .	123
7.1.1 Probability Density, Expectation and Ergodicity . . . . .	123
7.1.2 Autocorrelation and Power Spectrum . . . . .	124
7.1.3 Linear Systems . . . . .	127
7.1.4 Square-Law Detector . . . . .	129
7.2 Limiting Receiver Sensitivity . . . . .	132
7.3 Radiometers . . . . .	136
7.3.1 Thermal Noise of an Attenuator . . . . .	136
7.3.2 Cascading of Amplifiers . . . . .	137
7.3.3 Mixers . . . . .	138
7.3.4 Receiver Stability . . . . .	139
7.4 Correlation Receivers and Polarimeters . . . . .	143
7.5 Low Noise Frontend Amplifiers . . . . .	146
7.5.1 Transistor Amplifiers . . . . .	147
7.5.2 Parametric Amplifiers . . . . .	147
7.5.3 Maser Amplifiers . . . . .	150
7.5.4 Frontends for $\nu > 50$ GHz . . . . .	152
7.6 Spectrometers . . . . .	154
7.6.1 Multichannel Filter Spectrometers . . . . .	155
7.6.2 Digital Autocorrelation Spectrometer . . . . .	156
7.6.3 Acousto-Optical Spectrometers . . . . .	161
7.7 Receiver Calibration . . . . .	164
7.8 The Influence of the Earth's Atmosphere . . . . .	165

<b>8. Emission Mechanisms of Continuous Radiation</b>	169
8.1 The Nature of Radio Sources	169
8.2 Radiation from an Accelerated Electron	171
8.3 The Frequency Distribution of Bremsstrahlung for an Individual Encounter	173
8.4 The Radiation of an Ionized Gas Cloud	176
8.5 Nonthermal Radiation Mechanisms	180
8.6 Review of the Lorentz Transformation	180
8.7 The Synchrotron Radiation of a Single Electron	183
8.8 The Spectral Distribution of an Ensemble of Electrons	188
8.9 Energy Requirements of Synchrotron Sources	190
<b>9. Some Examples of Thermal and Nonthermal Radio Sources</b>	193
9.1 The Quiet Sun	193
9.2 Supernovae and Supernova Remnants	196
9.3 The Hydrodynamic Evolution of Supernova Remnants	198
9.4 The Radio Evolution of Supernova Remnants	203
<b>10. Line Radiation Fundamentals</b>	208
10.1 The Einstein Coefficients	208
10.2 Radiative Transfer with Einstein Coefficients	210
10.3 Dipole Transition Probabilities	212
10.4 The Rate Equation and Some Simple Solutions	214
10.5 The Radial Velocity	216
10.6 Observing the Line	218
10.7 Calibration	220
<b>11. Line Radiation of Neutral Hydrogen</b>	225
11.1 The 21 cm-Line of Neutral Hydrogen	225
11.2 The Spin Temperature	227
11.3 Emission and Absorption Lines	229
11.4 Differential Velocity Fields and the Shape of Spectral Lines	234
11.5 The Galactic Velocity Field in the Interstellar Gas	237
11.6 Modelling the Velocity and Density Distribution	242
<b>12. Recombination Lines</b>	245
12.1 Emission Nebulae	245
12.2 Photoionization Structure of Gaseous Nebulae	247
12.3 Physical Line Parameters	251
12.4 Line Intensities Under Conditions of Local Thermodynamic Equilibrium	253
12.5 Line Intensities when Conditions of Local Thermodynamic Equilibrium Do Not Apply	256
12.6 Interpretation of Radio Recombination Line Observations	262
12.7 Recombination Lines from Other Elements	264

<b>13. Interstellar Molecules and Their Line Radiation . . . . .</b>	<b>267</b>
13.1 Molecules in Interstellar Space . . . . .	267
13.2 Some Basic Concepts . . . . .	268
13.3 Pure Rotation Spectra . . . . .	270
13.4 Vibrational Transitions . . . . .	275
13.5 Line Radiation from Molecules . . . . .	277
13.6 Cloud Densities and Temperatures . . . . .	280
13.7 Galactic Masers . . . . .	281
13.8 The CO Line at $\lambda = 2.6$ mm . . . . .	285
13.9 Correlation of CO Line Intensities with Other Constituents of the Interstellar Medium . . . . .	288
<b>Appendix A. Some Useful Vector Relations . . . . .</b>	<b>290</b>
<b>Appendix B. Fourier Transform . . . . .</b>	<b>293</b>
<b>Appendix C. Hankel Transform . . . . .</b>	<b>295</b>
<b>Appendix D. Electromagnetic Field Quantities . . . . .</b>	<b>297</b>
<b>Appendix E. A List of Calibration Radio Sources . . . . .</b>	<b>299</b>
<b>List of Symbols . . . . .</b>	<b>301</b>
<b>References . . . . .</b>	<b>305</b>
<b>Subject Index . . . . .</b>	<b>313</b>
