

Contents

1. THE VISIBLE UNIVERSE	1
1.1. Introduction. 1.2. The electromagnetic spectrum. 1.3. Astronomy without light. 1.4. Radiation mechanisms. 1.5. Observing techniques at different frequencies. 1.6. The brightest sources. 1.7. Source counts. 1.8 Integrated background radiation. Problems.	
2. OUR GALAXY, AND OTHER GALAXIES	22
2.1. Introduction. 2.2. Star formation. 2.3. The evolution of a star. 2.4. Final stages: white dwarfs, neutron stars, and black holes. 2.5. The life history of our Galaxy. 2.6. The structure and evolution of galaxies. 2.7. Radio properties of galaxies. 2.8. ‘Active’ galaxies and quasars. 2.9. X-rays from galaxies and quasars. 2.10. Clusters of galaxies. Problems.	
3. THE EMPIRICAL BASIS FOR COSMOLOGICAL THEORIES	43
3.1. Introduction. 3.2. The distance scale. 3.3. The red shift. 3.4. Isotropy. 3.5. Uniformity. 3.6. Olbers’ paradox. 3.7. Evidence for a universe of finite age. 3.8. Evidence for a ‘fireball’ phase. Problems.	
4. THE BIG-BANG MODELS	58
4.1. The substratum and fundamental observers. 4.2. The cosmological principle. 4.3 Newtonian cosmology. 4.4. The special and general theories of relativity. 4.5. General relativistic cosmology. 4.6. Classification of cosmological models. 4.7. Cosmological parameters. 4.8. The age of the universe. 4.9. Horizon. Problems.	
5. EARLY STAGES OF THE BIG-BANG	75
5.1. Universe with matter and radiation. 5.2. The	

fireball. 5.3. Helium production. 5.4 Isotropy of the microwave background. 5.5. The evolution of density fluctuations during the fireball. 5.6. Distortions of the microwave background spectrum. Problems.	
6. FROM THE FIREBALL TO THE PRESENT	88
6.1. Before galaxies formed. 6.2 Formation of galaxies and clusters. 6.3. Intergalactic gas in clusters. 6.4 The masses of galaxies and clusters. 6.5. The average density of matter in the universe due to galaxies. 6.6. Some other possible forms of matter. 6.7. Intergalactic (and intercluster) gas. Problems.	
7. OBSERVATIONAL COSMOLOGY	98
7.1. Introduction. 7.2 Newtonian theory. 7.3 Special relativity cosmology: the Milne model. 7.4 General relativistic cosmology: the redshift. 7.5 Luminosity distance. 7.6 The K-correction. 7.7. Diameter distance. 7.8 Number counts of sources. 7.9 The luminosity-volume test. 7.10. Integrated background radiation. Problem.	
8. OTHER COSMOLOGICAL THEORIES	117
8.1. Introduction. 8.2. General relativistic models with the Λ -term. 8.3. Observational consequences of the Λ -term. 8.4. The steady-state cosmology. 8.5. Theories in which G changes with time. 8.6. Anisotropic and inhomogeneous universes, chaotic cosmology. 8.7. Grand unified theories. 8.8. Cold and tepid models of the universe. 8.9. Eddington's magic numbers. Problem.	
EPILOGUE: TWENTY CONTROVERSIES IN COSMOLOGY TODAY	130
