

CONTENTS

I. ORIGIN AND GROWTH OF THE PULSATION THEORY					
1.1.	Introduction				1
1.2.	Pulsating Stars				2
1.3.	The Pulsation Hypothesis				5
1.4.	Theoretical Developments				6
1.5.	Testing the Pulsation Hypothesis				9
1.6.	The Light Curves of Cepheids				10
1.7.	Evolutionary Problems				13
II. PRELIMINARY CONSIDERATIONS ON WAVE MOTIONS					
2.1.	The Equation of Motion				15
2.2.	Radial Motions				18
2.3.	Oscillations in Pressure, Density, and Temperature				20
2.4.	Lagrangian Equations for Radial Motions				21
2.5.	Illustrative Examples				23
III. ADIABATIC PULSATIONS OF STELLAR MODELS					
3.1.	The Periods				27
3.2.	The Homogeneous Star				27
3.3.	Eddington's Form of the Wave Equation				29
3.4.	The Inverse Square Model				31
3.5.	Roche's Model				32
3.6.	Miscellaneous Models				33
3.7.	Approximate Expressions for the Oscillation Frequency				39
3.8.	The Period-Density Relation				42
3.9.	Overtone Pulsations				46
IV. INTEGRATION THEORY					
4.1.	Orthogonality of the Harmonic Amplitudes				50
4.2.	Solution of the Inhomogeneous Wave Equation				51
4.3.	The Canonical Equations				52
4.4.	Contact Transformations				55
4.5.	Hamilton-Jacobi Integration Theory				57
4.6.	Non-adiabatic Perturbations				58
V. SECULAR STABILITY					
5.1.	Non-adiabatic Pulsations				60
5.2.	The Coefficient of Stability				63
5.3.	Phase Delay in Energy Generation				65
5.4.	Radio-active Transformations in a Pulsating Star				67
5.5.	A Short Chain				69
5.6.	Cowling's Transformation of the Expression for κ				71
5.7.	Stability of the Standard Model				73
5.8.	Stability of Main Sequence Stars				74

CONTENTS

5.9. Influence of Turbulent Convection	76
5.10. Stability of Massive Stars	77
5.11. The Period-Luminosity Relation of the Cepheids	78
5.12. The Contraction Problem	80
5.13. Homologous Contractions and Expansions	81
5.14. Contractional Stability	83
 VI. THE PHASE LAG PROBLEM	
6.1. Phase Relationships in a Pulsating Atmosphere	84
6.2. Thermal Waves	87
6.3. The Hydrogen Convection Zone	91
6.4. Waves running out into Space	92
 VII. ANHARMONIC PULSATIONS	
7.1. General Considerations	95
7.2. Eddington's Approximation	96
7.3. Separable Cases	99
7.4. The Homogeneous Star	100
7.5. Canonical Equations for the Second-order Approximation	102
7.6. A Single Excited Mode	104
7.7. Interaction of two Modes	108
7.8. The Problem of RR Lyrae Stars	109
7.9. The Problem of the RV Tauri Stars	111
7.10. Woltjer's Particular Solution	113
7.11. More General Solutions	117
7.12. The Limiting Amplitude	119
 VIII. RELAXATION OSCILLATIONS	
8.1. Impulsive Variables	124
8.2. Disruptive Oscillations	128
8.3. Shock Waves	131
8.4. Generation of Shock Waves	135
 IX. SEMI-EMPIRICAL TESTS OF THE PULSATION THEORY	
9.1. Baade's Criterion	139
9.2. Schwarzschild's Test	142
9.3. Long-period Variables	144
9.4. Statistical Correlation between Light and Velocity Curves	148
 INDEX OF NAMES	150
INDEX OF SUBJECTS	151
