

Contents

Foreword	v
Introduction	ix
List of Symbols	xii

Chapter I Semiconductor Physics

1.1	Quantum Mechanics	1
1.2	Crystal Structures and their Vibrations	4
1.3	Energy Bands and Carrier Statistics	11
1.4	Transport Theory	29
1.5	Semiconducting Materials	35
1.6	References for Chapter I	39

Chapter II The Relevant Equations for Plasma Instabilities

2.1	Maxwell's Equations	41
2.2	Boltzmann's Equation	45
2.3	Kinetic Energy Approach	50
2.4	Other Relevant Relations	53
2.5	Power Flow	54
2.6	References for Chapter II	56

Chapter III Methods for the Analysis of Instabilities

3.1	Small-Signal Analysis	58
3.2	Nyquist's Instability Criterion	67
3.3	Large-Signal Analysis	71
3.4	References for Chapter III	75

Chapter IV Instabilities of Semiconductor Plasmas

4.1	Gunn Oscillators and other Transferred Electron Effects	78
4.1.1	Basic Principle	78
4.1.2	The Domain	81
4.1.3	Modes of Operation	88
4.1.4	Space Charge Wave Amplifier	93
4.1.5	The Isa Oscillator	96
4.1.6	Further Phenomena	98

4.2	The Avalanche Effect	99
4.2.1	The Read Diode	100
4.2.2	The Misawa Instability	103
4.2.3	Further Avalanche-Instability Studies	109
4.2.4	General Experimental Results	111
4.3	The Electroacoustic Effect	115
4.3.1	Electroacoustic Gain	115
4.3.2	Electroacoustic Oscillations	119
4.3.3	Further Electroacoustic Instabilities	122
4.4	Two-Stream Interactions and Other Effects	123
4.4.1	Two-Stream Instabilities	123
4.4.2	Microwave Emission from InSb with Electric and Magnetic Fields Present	125
4.4.3	Alfvén and Helicon Wave Instabilities	129
4.4.4	Other Instability Effects	136
 Chapter V <i>Devices</i>		
5.1	The Transferred-Electron Effect	142
5.1.1	Oscillators and Amplifiers	142
5.1.2	Pulse Generation and Processing	149
5.1.3	Gunn-Effect Technology	164
5.2	Avalanche Devices	166
5.3	Applications of Electroacoustic and Other Effects	168
 Chapter VI <i>References for Chapters IV and V and Author Index</i>		173
Subject Index		200
