CONTENTS

I · Macroscopic Approach

0 · Survey 1
1 · Complex Permittivity and Permeability 3
2 · Polarization and Magnetization 6
3 · Coulomb and Dipole Fields 8
4 · Space-Charge Fields 12
5 · Correlations between Electric and Magnetic Phenomena 15
6 · Maxwell's Field Equations 19
7 · Electromagnetic Waves in Unbounded Space 20
8 · Dimensions and Units 21
9 · Description of Dielectrics by Various Sets of Parameters 26
10 · Forces 38
11 · Field Energy and Radiation 40
12 · Polarized Radiation 43
13 · Dipole Radiation 45
14 · Boundary Conditions 48
15 · Fresnel's Equations 50
16 · Reflection and Refraction of Plane Waves by Loss-Free Dielectrics 53
17 · Standing Waves 55
18 · Measurement of Dielectrics by Standing Waves; Interference Optics 58
19 · Skin Effect 61
20 · Reflection and Refraction by Media with Loss 64
21 · Guided Waves 67
22 · Electromagnetic Fields in Wave Guides 69
23 · Measurement of Dielectrics in Shorted Wave Guides 73
24 · Short-Circuited Guides and Cavity Resonators 77
25 · Treatment of Field Phenomena by Equivalent Circuits 82
26 · Representation of Dielectrics by Lumped Circuit Equivalents 86

II · Molecular Approach

0 · Survey 93
1 · Molecular Mechanisms of Polarization 95
2 · The Clausius-Mosotti-Lorentz-Lorenz Equation 97
3 · Electronic Polarization 99
4 · Anomalous Dispersion and Resonance Absorption 100
5 · Various Aspects of Electromagnetic Radiation 104
6 · Bohr's Quantum Theory 108
7 · Wave Mechanics 111
8 · The Structure of Atoms 114
9 · Atoms in Electric Fields; Stark Effect 123
10 · Atoms in Magnetic Fields; Zeeman Effect 127
11 · The Energy Level Diagram of Atoms 131
12 · Atoms in Electromagnetic Fields; the Dispersion Formula of Quantum Mechanics 135
13 · The Formation of Molecules 137
14 · Wave Functions of Molecules and the Concept of Quantum-Mechanical Resonance 141
15 · Bond Energies and Dipole Moments of Diatomic Molecules 144
16 · Static Dielectric Constants and Dipole Moments of Polar Gases 148
17 · Polyatomic Molecules 150
18 · Vibration and Rotation 155
19 · Electronic, Atomic, and Orientation Polarization of Gas Molecules 161
20 · The Bandwidth of Spectral Lines 166
21 · Microwave Spectroscopy 169
22 · Pressure Broadening and Debye's Relaxation Equation 174
23 · The Mosotti Catastrophe and the Local Field 178
24 · Formation and Structure of Liquids and Solids 181
25 · Various Models for the Discussion of Orientation Polarization in Liquids and Solids 187
26 · Piezoelectricity 193
27 · Dipole Moments, Piezoelectricity and Crystal Structure 198
28 · Ferroelectricity 202
29 · Paramagnetism and Ferromagnetism 213
30 · Ferromagnetic Metals and Semiconductors 219
31 · Interfacial and Space-Charge Polarization 228
32 · Conduction and Breakdown 234

Appendix

A · *Problems and Illustrative Examples* 253
I · Macroscopic Approach 253
1 · Interrelation between the real and imaginary part of the complex permittivity or permeability 253
2 · Depolarization and demagnetization 254
3 · Image dipole, image force, and electron emission 254
4 · Wilson's bipolar thundercloud 256
5 · Cyclotron and Betatron 256

6 · Maxwell's equations and the conservation of charge 257
7 · Shrinkage of the wavelength of an electromagnetic wave in a semiconductor 258
8 · Dimensional analysis 258
9 · Macroscopic analysis of the frequency-response characteristic of a ferrite 258
10 · Electric and magnetic balances 259
11 · Mass spectrographs 260
12 · The electromagnetic field energy and its flow according to Maxwell's equations 260
13 · Boundary condition for the electric and magnetic flux densities 260
14 · Interference filters 261
15 · Microwave optics 261
II · Molecular Approach 262
1 · The Compton effect 262
2 · Plasma resonance and dispersion of an electron gas 262
3 · Wave functions of the harmonic oscillator in an electric field 263
4 · The Kerr effect 264
5 · The Faraday effect 265
6 · The ionic atmosphere in the Debye-Hückel theory of strong electrolytes 266
7 · Dipole moments in polar liquids according to Onsager's theory 266
8 · The Franck-Condon principle 267
9 · Born's lattice theory and the compressibility of ionic crystals 268
10 · The Born-Haber cycle 269
11 · Electronic and heat conduction in metals according to the classical theory 270
12 · Space-charge-limited current flow 270
B · *Elements of Vector Analysis* 271
C · *Values of Physical Constants* 273
D · *Table of Symbols* 274
E · *Reference List of Books and Summarizing Articles* 276
