Preface

v

Chapter 1 – General Points of View on Electrical Properties of Materials

1

- 1-1 Introduction
- 1-2 Crystalline Covalent Solids
- 1-3 Crystalline Ionic Solids
- 1-4 Crystalline Metallic Solids
- 1-5 Noncrystalline Solids
- 1-6 Electron Motion in Metallic and Covalent Crystals
- 1-7 Magnetic Phenomena
- 1-8 Electric Polarization Phenomena
- 1-9 Lattice Motion

Chapter 2 – The Wave Nature of Particles

16

- 2-1 Introduction
- 2-2 A Classical Preliminary to Wave Functions
- 2-3 A Second Classical Preliminary to Wave Functions
- 2-4 The Wave Nature of Particles

- 2-5 The Schrödinger Wave Equation
- 2-6 Average Values of Observable Quantities
- 2-7 Boundary Conditions on the Wave Equation
- 2-8 The Rectangular Potential Well—An Example
- 2-9 Identical Particles
- 2-10 Spin
- 2-11 Comments on Actually Solving the Wave Equation

Chapter 3 — Electron States in Crystalline Solids 48

- 3-1 The Independent Electron Model
- 3-2 Electron States in a Rectangular Solid
- 3-3 The Mapping of Electron States—Density of States
- 3-4 The Electron States in a One-Dimensional Crystal—The Kronig-Penney Model
- 3-5 Electron States in a One-Dimensional Crystal—Fourier Analysis
- 3-6 Density of States with Band Structure

Chapter 4 — Charge Carrier Densities 76

- 4-1 The Fermi-Dirac Probability Function
- 4-2 Electrons in a Uniform Rectangular Potential Well—Fermi Energy
- 4-3 State Occupancy in the Band Structure Model—Pure Ideal Crystals
- 4-4 Semiconductor State Occupancy and Fermi Energy with Impurities

Chapter 5 — Charge Carrier Dynamics 103

- 5-1 Homogeneous Electron-State Occupancy Transients—Relaxation Time and Lifetime
- 5-2 The Concept of Effective Mass
- 5-3 Current Flow in Terms of Energy Band Location
- 5-4 Macroscopic Electron and Hole Flow Equations

Chapter 6 — Bulk and Surface Effects — Simple Junctions 137

- 6-1 Resistivity
- 6-2 The Haynes-Shockley Experiment
- 6-3 The Hall Effect
- 6-4 The p-n Semiconductor Junction
- 6-5 The Biased p-n Semiconductor Junction
- 6-6 High-Level Injection and Avalanche Breakdown in p-n Junctions
- 6-7 Metal-Semiconductor Junctions
- 6-8 Semiconductor-Insulator Surfaces—MIS Structure

Chapter 7 — Bipolar and Field-Effect Transistors	181
7-1 The Bipolar Transistor in Active-Mode Bias	
7-2 The Bipolar Transistor in Saturation-Mode Bias	
7-3 The Bipolar Transistor in Cutoff-Mode Bias	
7-4 Switching Transients	
7-5 High-Frequency, Small-Signal Operation	
7-6 MIS Field-Effect Transistor Characteristics	
 Chapter 8 — Electric Polarization Phenomena and Dielectric Properties	 220
8-1 The Macroscopic Polarization Field; Dielectric Constant	
8-2 Electronic Polarizability	
8-3 Ionic Polarization	
8-4 Orientational Polarization	
8-5 Polarizability and the Dielectric Constant—Internal Fields	
8-6 Crystal Lattice Vibrations and Piezoelectricity	
8-7 Other Areas of Interest in Dielectric Properties	
 Chapter 9 — Magnetic Fields and “Nonmagnetic” Materials	 257
9-1 Free-Space Magnetostatics	
9-2 Magnetic Dipole Moment Density—The Magneti- zation Vector	
9-3 Curl \vec{M} as an Equivalent Current Density— Amperian Currents	
9-4 Magnetic Field Intensity and Scalar Magnetic Potential	
9-5 An Alternate Point of View—Magnetic Charges	
9-6 Classical Diamagnetism	
9-7 Force, Torque, and Energy for a Magnetic Dipole Moment	
9-8 Spin Paramagnetism in Nontransition Metals	
9-9 Paramagnetism from Localized Atomic Magnetic Dipoles	
 Chapter 10 — Magnetic Order in Technical Magnetic Materials	 285
10-1 Magnetic Moments of Some Free Atoms or Ions	
10-2 Magnetic Order and the Weiss Internal Field	
10-3 Sources of the Weiss Internal Field—Exchange Energy	

10-4	Magnetic Anisotropy and Magnetostriction	
10-5	Magnetization Curves of a Small Magnetic Particle	
10-6	Domains and Domain Walls	
10-7	Magnetization Curves of Picture-Frame Silicon-Iron Crystals	
10-8	Gyromagnetic Effects in Nonconducting Magnetic Materials	

Bibliography	323
Index	325
