CONTENTS

PRINCIPAL SYMBOLS, XX PHYSICAL DATA, XXiii NUMERICAL DATA, XXV

Part I

CHAPTER 1. INTRODUCTORY SURVEY OF EARLY INVESTIGATIONS, 1

- 1.1 Introduction, 1
- 1.2 Gaseous Conduction Produced by X-Rays, 1
- 1.3 Mobilities of Ions, 2
- 1.4 Measurement of Coefficients of Diffusion of Ions in Gases, 3
- 1.5 Early Theoretical Investigations of Diffusion and Drift of Ions in Gases, 4
 - 1.5.1 Nernst-Townsend Formula, 4
 - 1.5.2 P. Langevin's Theoretical Investigation of Diffusion and Drift, 5
- 1.6 The Discovery of the Electron, 7
- 1.7 The Atomic Charge and the Charge of a Gaseous Ion, 8
 - 1.7.1 Introduction, 8
 - 1.7.2 Measurement of the Atomic Charge, 9
- 1.8 First Conclusive Demonstration that Gaseous Ions Carry the Atomic Charge, 13

ix

x CONTENTS

- 1.9 Ionization by Collision and the Parameter E/p, 13
 - 1.9.1 Ionization by Collision, 13
 - 1.9.2 The Parameter E/p, 15
- 1.10 Development of Swarm Techniques to Study the Motion of Free Electrons with Small Energies in Gases, 16
 - 1.10.1 Positive Ions, 18
 - 1.10.2 Negative Ions, 19
- 1.11 Theoretical Investigations of the Motion of Free Electrons in Gases, 23
- 1.12 Further Developments in Experimental Procedures, 27

CHAPTER 2. THE MAXWELL-BOLTZMANN EQUATION AND RELATED TOPICS, 32

- 2.1 Introduction, 32
- 2.2 Collision Cross Sections for Particle Scattering: Concept of Interacting Beams, 32
 - 2.2.1 Elastic, Inelastic, and Superelastic Encounters, 38 (a) Elastic encounters, 39
 - (b) Inelastic encounters, 39
 - (c) Superelastic encounters, 40
 - 2.2.2 Momentum Transfer Cross Section, 40
- 2.3 Distribution Function and Velocity Space, 42
- 2.4 Resolution of Random Motion into an Aggregate of Elementary Beams, 42
- 2.5 The Maxwell-Boltzmann Equation, 44
 - 2.5.1 Introduction, 44
 - 2.5.2 Formulation of the Maxwell-Boltzmann Equation, 44
- 2.6 The Maxwell-Boltzmann Equation for Velocity Shells, 46 2.6.1 Velocity Shells, 46
- 2.7 Adaptation of Maxwell-Boltzmann Equation to a Complete Shell, 49
 - 2.7.1 The Scalar Equation, 49
 - 2.7.2 The Vector Equation, 52
- 2.8 Electron Motion in the Presence of a Magnetic Field, 59

CHAPTER 3. RESTRICTED THEORY OF DRIFT AND DIFFUSION, 62

- 3.1 Introduction, 62
- 3.2 The Scalar Equation and Its Equivalent Forms, 63

- 3.3 The Vector Equation: Resolution of $W_{conv}(c)$ into a Drift Velocity W(c) Due to eE and a Convective Velocity $W_G(c)$ Due to grad_r(nf_0), 64
- 3.4 Uniform Stream of Electrons, 68
 - 3.4.1 Formula for Distribution Function when All Encounters Are Elastic, 68
 - 3.4.2 Formula for Drift Velocity in the General Case, 69
- 3.5 Motion in Monatomic Gases, 70
- 3.6 Unit of Measurement for the Parameter E/N, 74
- 3.7 Distribution Function when $q_{m_{el}}(c)$ Is Proportional to a Power of c and $V^2 \gg \overline{C^2}$, 74
 - 3.7.1 The Most Probable Speed c_m , 76
 - 3.7.2 Formula for the Mean Value of c^{x} , 77
- 3.8 Differential Equation for *n* and Coefficient of Diffusion, 78
- 3.9 Discussion of Formulae for W and D/μ , 81
- 3.10 The Ratio W/D when E/N Is Small, 83
- 3.11 Comment on the Approximate Solution of the Scalar Equation, 85

CHAPTER 4. GENERAL THEORY OF DIFFUSION AND DRIFT IN A UNIFORM AND CONSTANT ELECTRIC FIELD, 89

- 4.1 Introduction, 89
- 4.2 Isolated Travelling Group of Electrons, 90
- 4.3 Solution of Scalar Equation in a General Form, 96
 - 4.3.1 Motion Without an Electric Field, 98
 - 4.3.2 Motion in One Spatial Dimension, 103
 - 4.3.3 Three-Dimensional Motion in a Uniform Electric Field, 109
- 4.4 Extension of the Theory to a Steady Stream, 111
- 4.5 Number Density and Current, 113
 - 4.5.1 Number Density, 113
 - 4.5.2 Current Density, 113
 - 4.5.3 Illustrative Example, 114
- 4.6 Inelastic Encounters, 115
- 4.7 Einstein's Formula, 117
- 4.8 Thermodynamic Treatment of Anisotropic Diffusion in an Electric Field, 119

xii CONTENTS

- CHAPTER 5. THE THEORY OF SWARM METHODS FOR MEASURE-MENT OF DRIFT VELOCITY W, CHARACTERISTIC ENERGY eD/μ , AND RELATED QUANTITIES, 121
 - 5.1 Introduction, 121
 - 5.1.1 General, 121
 - 5.1.2 Boundary Condition at a Metal Surface, 121
 - 5.2 Measurement of Drift Velocity by Time-of-Flight Methods, 124
 - 5.2.1 Combined Effect of Diffusive Processes, 125
 - 5.2.2 Contributions of Individual Diffusive Processes, 130
 - (a) The decay of the group, 130
 - (b) Flux across a geometrical plane due to diffusion, 131
 - (c) Back diffusion to the cathode, 131
 - (d) Diffusion to the second shutter, 132
 - 5.3 The Theory of the Steady Stream from a Point Source, 133
 - 5.3.1 Theory of Unimpeded Stream, 133
 - 5.3.2 Some Properties of the Bessel K Functions, 136
 - 5.3.3 Formula for the Current Ratio with a Circular Division of the Anode, 138
 - 5.3.4 Formula for the Current Ratio with Strip Division of the Anode, 143
 - 5.4 Distribution of Number Density $n(\mathbf{r}, t)$ in the Presence of a Slight Degree of Ionization by Collision and of Loss of Electrons by Attachment to Molecules, 146
 - 5.4.1 Equation for $n(\mathbf{r}, t)$, 146
 - 5.4.2 The Isolated Travelling Group, 150
 - 5.4.3 Distribution of Number Density in a Stream, 152
 - 5.5 Direct Measurement of the Coefficient of Diffusion, 158

CHAPTER 6. THE INFLUENCE OF INELASTIC ENCOUNTERS, 163

- 6.1 Introduction, 163
- 6.2 Expressions for $\sigma_{coll}(c)$ and $f_0(c)$ in the Model Gas, 164
- 6.3 The Function $f_1(c)$, 168
- 6.4 The Scalar and Vector Equations for a Travelling Group, 169
 - 6.4.1 The Scalar Equation, 169
 - 6.4.2 The Vector Equation, 170
- 6.5 Contribution of Superelastic Encounters, 172
 - 6.5.1 Formula for $f_1(c)$ when Superelastic Encounters Are

- 6.6 Formulation for Molecules with Several or Many Energy States, 176
- 6.7 The Scalar and Vector Equations for nf_0 and nf_1 at an Element of Volume dr, 178
 - 6.7.1 The Scalar Equation, 178
 - 6.7.2 The Vector Equation and the Working Scalar Equation, 179
- 6.8 Formulae and Equations with the Energy $\epsilon = \frac{1}{2}mc^2$ as Independent Variable, 181
 - 6.8.1 Distribution Function $f(\epsilon)$, 181
 - 6.8.2 The Mean Value of a Function $\phi(\epsilon)$, 181
 - 6.8.3 Formulae for W and D, 182
 - 6.8.4 Transformation of Equations, 182
- 6.9 Motion of Electrons when the Molecular Energy States Are Closely Spaced and the $\epsilon_{k_{in}}$ Are Small, 185

CHAPTER 7. THE METHOD OF FREE PATHS, 189

- 7.1 Introduction, 189
- 7.2 Free Times and Free Paths, 190
 7.2.1 The Mean Value of a Function φ(t), 192
 7.2.2 Special Cases, 193
- 7.3 Derivation of Formula for Drift Velocity W by the Method of Free Paths, 195
 - 7.3.1 The Interpretation of W as the Velocity of the Centroid, 195
 - 7.3.2 Derivation of Formula for W, 197
- 7.4 The Momentum of the Electrons of a Shell (c, dc) in the Steady State of Motion, 204
 - 7.4.1 Alternative Derivation of Formula for W(c), 206
- 7.5 The Velocity Distribution Function $f_0^*(c)$, 208
- 7.6 General Expression for Drift Velocity in the Unrestricted Case, 210

CHAPTER 8. DIFFUSION AND DRIFT IN THE PRESENCE OF A STEADY AND UNIFORM MAGNETIC FIELD, 214

- 8.1 Introduction, 214
- 8.2 Drift in Uniform and Constant Electric and Magnetic

Xiv **CONTENTS**

.

- Special Case—Crossed Electric and Magnetic 8.2.1 Fields, 218
- Magnetic Deflexion Coefficient ψ , 219 8.2.2
- 8.2.3 Special Case: ω parallel to eE, 222
- Diffusion in the Presence of a Magnetic Field, 223 8.3 8.3.1 Special Case: ω Directed Along + Oy, 225
- Distribution Function and Differential Equation for n, 226 8.4
- 8.5 Distribution of Electron Number Density in a Steady Stream from a Point Source in the Presence of Crossed Electric and Magnetic Fields, 234
- Principle of Experimental Methods, 241 8.6
 - 8.6.1 Townsend's Method (1912), 241
 - Method of Huxley and Zaazou (1949), 244 8.6.2

CHAPTER 9. MOTION IN A HIGH FREQUENCY ELECTRIC FIELD, 250

- 9.1 Introduction, 250
- Time Constants of Momentum and Energy, 251 9.2
- Drift Velocity Under an Oscillating Electric Field Whose 9.3

Period Is Much Less than the Time Constant of Decay of the Mean Electron Energy, 253

- 9.3.1 Special case: $\omega_x = \omega_y = 0, \ \omega_z = \omega, 257$
- 9.3.2 E Normal to ω , 260
- 9.3.3 Rotating Electric Vector, 260
- 9.3.4 Limiting Forms of I_{-} and I_{+} , 261
- 9.3.5 Gyromagnetic Resonance, 262
- 9.4 Mean Value over a Cycle of the Product of Two Quantities Oscillating Sinusoidally at the Same Frequency, 263
- 9.5 The Mean Power Communicated to an Electron, 264
- 9.6 The Distribution Function $f_0(c)$, 268
 - Appendix A Maxwell's Vector Representation of An Encounter, 273
 - Appendix B Transference of Momentum and Energy from Electrons to Molecules, 276
 - Appendix C Expansion of $f(\mathbf{c}, \mathbf{r}, t)$ in Spherical Harmonics when E and $grad_r(n)$ Are Not Parallel, 290

Part II

CHAPTER **10. EXPERIMENTAL METHODS FOR MEASURING ELECTRON DRIFT VELOCITIES**, 297

- 10.2 The Pulsed Townsend Discharge Technique, 298
- 10.3 Electrical Shutter Techniques, 304
 - 10.3.1 Ion Mobility Experiments of Van de Graaff and of Tyndall et al., 304
 - 10.3.2 Application of "Four-Gauze" Method to Electron Drift Velocity Measurements, 306
 - 10.3.3 Experiments of Bradbury and Nielsen, 307
 - 10.3.4 Later Experiments Using the Bradbury-Nielsen Technique, 309
 - 10.3.5 Experiments of Phelps and Others, 310
 - 10.3.6 Interpretation of Results from Electrical Shutter Experiments, 313
 - (a) Bradbury-Nielsen experiment, 315
 - (b) Experiments with square wave pulses of constant duration, 316
 - (c) Experiments using variable drift distances, 316
- 10.4 Experiments Based on Detection of Photons from Drifting Electron Groups, 316
- 10.5 Methods Dependent on Measurement of Arrival Time Distributions, 319
- High-Precision Measurements Using the Bradbury-Nielsen 10.6 Technique, 327
 - 10.6.1 Design Criteria, 329
 - 10.6.2 The Electric Field E, 329
 - 10.6.3 The Gas Number Density N, 334
 - 10.6.4 The Drift Distance h, 334
 - 10.6.5 Measurement of the Effective Transit Time t_m , 336
 - 10.6.6 The Gas Temperature T, 340
 - 10.6.7 Gas Purity, 341
 - 10.6.8 The Correction Factor C β , 344
 - 10.6.9 Results, 346
- Measurement of W in the Presence of Ionization and 10.7 Attachment, 347
 - 10.7.1 Attachment but No Ionization, 348
 - 10.7.2 Ionization but No Attachment, 349
 - (a) Electrical shutter experiments, 349
 - (b) Pulsed discharge experiments, 350
 - 10.7.3 Simultaneous Ionization, Attachment, and Detachment, 356
- 10.8 Measurements of W at Abnormally Large Gas Number Densities, 358 Appendix 10.1, 364

Appendix 10.2, 367

xvi CONTENTS

CHAPTER 11. EXPERIMENTAL METHODS FOR DETERMINING ELECTRON DIFFUSION COEFFICIENTS, 371

- 11.1 Introduction, 371
- 11.2 A Summary of the Progress Towards an Adequate Theory of the Townsend-Huxley Lateral Diffusion Experiment, 373
 - 11.2.1 Townsend's Solution, 374
 - 11.2.2 Huxley's Solution, 376
 - 11.2.3 The Solution of Hurst and Liley, 381
 - 11.2.4 The Solution of Warren and Parker, 387
 - 11.2.5 Parker's Solution Allowing for the Spatial Variation of the Energy Distribution Function, 388
 - 11.2.6 Other Solutions Based on a Spatially Dependent Energy Distribution Function, 396
 - 11.2.7 Solutions Based on the Steady-State Differential Equation for n Assuming Anisotropic Diffusion, 399
 - 11.2.8 Lateral Spread of an Isolated Travelling Group, 401
- 11.3 Experimental Determination of D/μ in the Absence of Ionization and Attachment, 404
 - 11.3.1 Introduction: Early Measurements, 404
 - 11.3.2 Experiments of Cochran and Forester, 405
 - 11.3.3 Experiments of Warren and Parker, 405
 - 11.3.4 Experiments of Cottrell and Walker, 409
 - 11.3.5 Experiments of Crompton, Elford, and Others, 410
 - (a) Apparatus, 411
 - (b) Design criteria and determination of experimental parameters, 415
 - (c) Factors determining the energy distribution function, 420
 - (d) Measurement of the current ratios and the effect of space charge repulsion, 420
 - (e) Results, 426
- 11.4 Measurements of D/μ in the Presence of Ionization and Attachment, 427
 - 11.4.1 Bailey's Method, 428
 - 11.4.2 Huxley's Method, 432
 - 11.4.3 Measurements of D/μ when Ionization Is Significant, 440
- 11.5 Direct Measurement of the Diffusion Coefficient D, 452
 - 11.5.1 Cavalleri's Method, 452
 - 11.5.2 Measurements of Thermal Diffusion Coefficients by Other Methods, 465

- Measurement of the Longitudinal Diffusion Coefficient 11.6 D_L , 471
 - 11.6.1 Experiments Based on the Analysis of Arrival-Time Spectra, 471
 - 11.6.2 Experiments Based on the Bradbury-Nielsen Technique, 479

CHAPTER 12. EXPERIMENTAL DETERMINATIONS OF OTHER **ELECTRON TRANSPORT COEFFICIENTS**, 485

- Introduction, 485 12.1
- Measurement of the Magnetic Drift Velocity W_M , 486 12.2
- Measurements of the Attachment Coefficients α_a and α_{at} , 491 12.3
 - Steady-State Methods, 491 12.3.1
 - (a) Bailey's method, 492
 - (b) Huxley's method, 492
 - (c) Methods employing electrical filters, 495
 - (d) Growth-of-current experiments, 497
 - 12.3.2 Transient Methods, 501
 - (a) Doehring's method, 501
 - (b) Method of Bortner and Hurst, 510
 - (c) Methods based on the analysis of transient wave forms, 515
 - (d) Single-avalanche methods, 517
 - 12.3.3 Results and Conclusion, 518

CHAPTER 13. CROSS-SECTION DETERMINATIONS FROM ELECTRON **TRANSPORT DATA**, 523

- Introduction and Historical Synopsis, 523 13.1
- Basic Principles and Early Methods of Analysis, 525 13.2
 - 13.2.1 The Determination of an Effective Mean Value of $q_{m_{-1}}$ as a Function of \overline{c} when Only Elastic Scattering Occurs: the Mean Value Technique, 527
 - 13.2.2 Extension of the Mean Value Technique to Situations in which the Druyvesteyn Formula Is Inapplicable: the Methods of Townsend, Bailey, Huxley, and Others, 529
 - 13.2.3 Energy Losses in Elastic and Inelastic Collisions, 532
- Analysis of the Data from Microwave Experiments, 535 13.3
- The Analyses of Bowe, Heylen, Phelps, Shkarofsky, and 13.4 Others, 541

xviii CONTENTS

- 13.5 Analyses Based on Numerical Solutions of the Boltzmann Equation, 546
 - 13.5.1 Elastic Scattering, 548
 - 13.5.2 Elastic and Inelastic Scattering, 557
 - (a) Solutions neglecting collisions of the second kind, 560
 - (b) Solutions including collisions of the second kind, 563
 - (c) Fitting parameters, 564
 - (d) Summary of the characteristics of swarm analyses, 566
 - (e) Rotational and vibrational excitation in hydrogen, 568
 - (f) Cross sections for rotation, vibration, electronic excitation, and ionization in nitrogen, 577
- 13.6 Beam-Swarm Techniques for Determining Attachment Cross Sections, 583
- 13.7 Conclusion, 587

CHAPTER 14. COMPILATION OF EXPERIMENTAL RESULTS AND DERIVED CROSS SECTIONS, 592

- 14.1 Introduction, 592
 - 14.1.1 Experimental Data for Transport Coefficients, 592
 - 14.1.2 Cross Sections Derived from Experimental Swarm Data, 594
- 14.2 Format, 597
 - 14.2.1 Statements of Accuracy, 597
 - 14.2.2 Referencing, 597
 - 14.2.3 Comments on the Values of ND, 598
- 14.3 Tabulated and Graphical Data, 599
 - 14.3.1 Helium, 600
 - 14.3.2 Neon, 604
 - 14.3.3 Argon, 607
 - 14.3.4 Krypton and Xenon, 612
 - 14.3.5 Hydrogen and Deuterium, 615
 - 14.3.6 Nitrogen, 627
 - 14.3.7 Oxygen, 632
 - 14.3.8 Air, 638
 - 14.3.9 Carbon Dioxide, 640
 - 14.3.10 Carbon Monoxide, 645

14.3.11 Water Vapour, 648 14.3.12 Experimental Data for Other Gases, 651

,

AUTHOR INDEX, 655
