

Contents

Preface vii

1 Introduction **1**

- 1.1 Preliminaries 1
- 1.2 Regular and singular perturbations 2
- 1.3 Matched asymptotic expansions 3
 - 1.3.1 More on matching 10
- 1.4 Multi-variable expansions 18

2 Activation-energy asymptotics **25**

- 2.1 Role of the large activation-energy limit 25
- 2.2 Reactive-diffusive model 27
 - 2.2.1 The static response 29
 - 2.2.2 A dynamic response 39
- 2.3 Low-amplitude plane waves in a reactive gas 53
 - 2.3.1 Near-field solution 58
 - 2.3.2 Far-field solution 61

3 Isothermal systems **65**

- 3.1 Jump phenomenon caused by poisoning of catalyst 65
 - 3.1.1 The mathematical model 66
 - 3.1.2 The static response 67
 - 3.1.3 The dynamic response 68
- 3.2 Transient diffusion and reaction of two initially unmixed reactants 77
 - 3.2.1 The initial transient 79
 - 3.2.2 Beyond the initial transient 85
 - 3.2.3 The general case 87

4 Oscillations **92**

- 4.1 Bifurcation of oscillatory states 92
- 4.2 Chemical waves 101
- 4.3 Forced cycling 105
