Preface	vi
<i>Chapter 1 (S. Černý)</i>	
Energy and entropy of adsorption	1
1. Introduction.	1
2. Fundamentals of classical thermodynamics of adsorption	2
2.1 Approaches to classical thermodynamics of adsorption	2
2.2 Solution thermodynamic treatment of Hill and Everett.	3
2.3 Constraint of inert adsorbent.	5
2.4 Characteristic functions for the adsorbed state and adsorption equilibrium	7
2.5 Multicomponent adsorption	8
2.6 Heats of adsorption	8
2.6.1 Nomenclature	8
2.6.2 Isothermal heats	8
2.6.3 Adiabatic heat.	10
2.6.4 Heats of compression	11
2.7 Heat capacity of the adsorbed phase	12
2.8 Extraction of the heat and entropy of adsorption from adsorption isotherms.	12
2.8.1 Thermodynamic functions for the set (T, P, Γ)	12
2.8.2 Thermodynamic functions for the set (T, P, ϕ)	13
2.8.3 Entropy of the adsorbed layer	14
2.8.4 Standard states	15
2.8.5 Potential theory of adsorption	17
3. Fundamentals of statistical thermodynamics of adsorption	18
3.1 Introductory remarks	18
3.1.1 Approaches to the application of statistical mechanics to the thermodynamics of adsorption.	18
3.1.2 Thermodynamic equivalence of statistical-mechanical ensembles.	19
3.2 Development of partition functions for adsorbed particles starting from the configuration integral	20
3.3 Development of partition functions for adsorbed particles starting from a particular model	24
3.3.1 Localized, non-localized, mobile, and immobile adsorption	24
3.3.2 Treatment of models of localized adsorption.	26
3.3.3 Treatment of models of non-localized adsorption.	35
4. Features of experimental thermodynamic data	36
4.1 Introductory remarks.	36
4.2 Adsorbent sample	37
4.3 Experimental methods	38
4.3.1 Isotherms.	38
4.3.2 Calorimetry	39
4.3.3 Activation energy for desorption	40
4.3.4 Comparison of particular experimental methods for obtaining heats of adsorption	40
4.4 Processing of the raw data.	40
4.5 Closing word of caution	42

5. Some examples of utilization of thermodynamic quantities	43
5.1 Information on the heterogeneity of the surface	43
5.2 Entropy as a criterion of mobility.	46
5.3 Thermochemical and qualitative approaches	47
5.3.1 General remarks	47
5.3.2 Initial heat of adsorption.	48
5.3.3 Dependence of the heat on the adsorbed amount.	49
5.3.4 Some particular applications of the heats of adsorption.	50
6. Conclusion.	51
Acknowledgement.	52
References	52

Chapter 2 (R.F. Willis, A.A. Lucas and G.D. Mahan)

Vibrational properties of adsorbed molecules	59
1. Introduction.	59
2. Vibrational modes of molecules on surfaces	63
3. Vibrational properties: frequency and line shape.	67
3.1 Isolated adsorbate	67
3.1.1 Mechanical renormalization	67
3.1.2 Self-image shift	71
3.1.3 Localized site adsorption.	79
3.2 Coupled vibrations of overlayer	81
3.2.1 Dipolar interactions	82
3.2.2 Vibrational coupling.	91
3.3 Line width	93
3.3.1 Decaying image	95
3.3.2 Resonance broadening	97
3.3.3 Mechanical and "chemical" damping.	99
3.4 Summary: frequency and line shape	99
4. The experimental probes.	100
4.1 Infrared reflection absorption spectroscopy (IRAS)	100
4.1.1 Physical basis	101
4.1.2 Adsorbed layers.	103
4.1.3 Local field effects	105
4.1.4 Experimental results. Adsorption of CO on Pd	108
4.1.5 Summary	111
4.2 Surface-enhanced Raman spectroscopy (SERS)	113
4.2.1 Experimental characteristics	115
4.2.2 Theoretical mechanisms	122
4.2.3 Summary	128
4.3 Electron energy loss spectroscopy (EELS)	130
4.3.1 Physical basis	131
4.3.2 Dipole scattering theory	134
4.3.3 Experimental results.	139
4.3.4 Summary	146
4.4 Inelastic electron tunnelling spectroscopy (IETS)	147
4.4.1 Physical basis	148
4.4.2 Theoretical concepts	149
4.4.3 SERS—tunnel junctions	155
4.4.4 Summary	157
5. Concluding remarks	158
Acknowledgements	158
References	159

Chapter 3 (M. Scheffler and A.M. Bradshaw)

The electronic structure of adsorbed layers.	165
1. Introduction.	165
2. The electronic structure of the adsorbate-covered metal surface	167
2.1 The density-functional formalism	167
2.2 The charge density and the electrostatic potential	169
2.3 The surface barrier	176
2.4 The surface chemical bond	179
2.4.1 Adsorption on nearly free-electron metals	180
2.4.2 Adsorption on transition metals	194
3. Photoionisation: many-body aspects	197
3.1 Introduction.	197
3.2 The adiabatic approximation	201
3.3 Dynamical effects	204
4. Electron spectroscopy of adsorbate-covered surfaces	207
4.1 Valence level photoelectron spectroscopy	208
4.2 Core level photoelectron spectroscopy.	225
5. Adsorption-induced changes in surface electronic properties	235
5.1 The work function.	236
5.2 Resistivity	246
5.3 Magnetic effects	249
6. Conclusions and outlook.	250
Acknowledgements	252
References	252

Chapter 4 (D.P. Woodruff, G.-C. Wang and T.-M. Lu)

Surface structure and order—disorder phenomena	259
1. Introduction.	259
2. Local order and adsorbate—substrate registry	260
2.1 Diffraction techniques	260
2.2 Local electron scattering methods.	267
2.3 Incident ion techniques	286
2.4 Electron and photon stimulated desorption	296
2.5 Recapitulation and summary	305
3. Long-range order in adsorbed overlayers	306
3.1 Experimental techniques.	307
3.1.1 Instrumental effects	307
3.1.2 Measurement of the instrument response function	308
3.2 Two-dimensional phase diagrams	310
3.2.1 Lattice gas models	310
3.2.2 Measurements of phase boundaries	314
3.2.3 Experimental phase diagrams	314
3.3 Island-forming systems	319
3.3.1 Formation of finite size islands.	319
3.3.2 LEED intensities from finite size islands.	321
3.3.3 Experimental determination of island sizes	322
3.4 Order—disorder transitions	324
3.4.1 LEED intensity and overlayer order—disorder transitions	325
3.4.2 A chemisorbed overlayer order—disorder transition	326
3.5 Summary	327
Acknowledgements	327
References	327

Chapter 5 (T.B. Grimley)

Theory of chemisorption	333
1. Introduction	333
2. Qualitative approaches to chemisorption	334
2.1 Generalized frontier orbital theory	334
2.2 Group orbital resonances	340
3. Exact molecular orbital schemes	342
3.1 The density functional formalism	342
3.2 The dynamic Hartree–Fock theory	344
3.3 The multi-configuration Hartree–Fock system	347
4. Theoretical models for numerical work	347
4.1 The HF model	348
4.1.1 Cluster models	349
4.1.2 Ordered overlayers	350
4.2 Embedded clusters	352
4.3 The Hartree–Fock–Slater model	355
4.4 The local-density version of the Hohenberg–Kohn–Sham scheme	357
4.4.1 Ordered overlayers	357
4.4.2 Single adatoms on jelliums	358
4.4.3 The hydrogen molecule on jellium	361
4.4.4 Chemisorption by semiconductors	363
5. Model Hamiltonians	363
5.1 Some general formulae	364
5.2 Anderson’s model	364
5.3 The Grimley–Pisani model	369
6. Interactions in overlayers	370
6.1 The through-space interaction	370
6.2 The through-bond interaction	370
6.3 The elastic interaction	373
References	374
Index	377
