| Preface | vi |
|-------------------|----|

Chapter 1 (R.J. Madix)

| | |
|--|----------|
| Selected principles in surface reactivity: reaction kinetics on extended surfaces and the effects of reaction modifiers on surface reactivity | 1 |
| 1. Introduction | 1 |
| 2. Reaction kinetics on well-defined surfaces | 2 |
| 2.1 Elementary collision theory | 2 |
| 2.2 Random walk | 3 |
| 2.3 Transition state treatment of the 2D lattice gas | 4 |
| 2.4 Effect of attractive interactions | 6 |
| 3. Surface reaction modifiers | 9 |
| 3.1 The effect of sulfur on surface reactivity | 9 |
| 3.1.1 Properties of adsorbed sulfur | 9 |
| 3.1.2 Adsorption and desorption of CO | 11 |
| 3.1.3 Desorption of hydrogen | 12 |
| 3.1.4 Reactions of CO and NO on Pt | 12 |
| 3.1.5 Decomposition of CH ₃ OH | 13 |
| 3.1.6 Decomposition and reactions of H ₂ CO | 14 |
| 3.2 Reactions on carbon overlayers | 15 |
| 3.2.1 Carbon monoxide adsorption/desorption | 15 |
| 3.2.2 Hydrogen adsorption/desorption | 18 |
| 3.2.3 The decomposition of formic acid | 19 |
| 3.2.4 Complex reactions on tungsten surfaces | 21 |
| Summary | 22 |
| Acknowledgements | 22 |
| References | 23 |

Chapter 2 (P.R. Norton)

| | |
|--|-----------|
| The hydrogen—oxygen reaction on metal surfaces | 27 |
| 1. Introduction | 27 |
| 1.1 Historical | 28 |
| 2. Adsorption of components of reaction on metal surfaces | 29 |
| 2.1 General considerations | 29 |
| 2.2 Kinetics and energetics of adsorption of hydrogen | 29 |
| 2.3 Kinetics and energetics of adsorption of oxygen | 31 |
| 2.4 Adsorption of H ₂ O | 32 |
| 2.4.1 Adsorption of H ₂ O on Pt{111} and Pt{100} surfaces | 32 |
| 2.4.2 Other methods of characterizing adsorption of H ₂ O | 35 |
| 2.5 Co-adsorption of water and other components of the H ₂ —O ₂ reaction | 37 |
| 3. Formation of adsorbed —OH groups | 38 |
| 4. Summary of properties of adsorbed reactants and products | 40 |
| 5. Hydrogen—oxygen reaction on platinum surfaces | 42 |
| 5.1 Reaction with one component pre-adsorbed | 42 |
| 5.1.1 Kinetics of reaction of H ₂ with pre-adsorbed oxygen at T > 200 K | 42 |
| 5.1.2 Products of reaction of adsorbed oxygen with H ₂ at T < 200 K | 48 |

| | |
|--|----|
| 5.1.3 Reaction of adsorbed hydrogen with O ₂ | 51 |
| 5.2 Interaction of co-adsorbed hydrogen and oxygen | 51 |
| 6. H ₂ —O ₂ reaction on Rh{111} | 53 |
| 6.1 Co-adsorption of oxygen and hydrogen | 53 |
| 6.2 Reaction between adsorbed O and H ₂ on Rh{111} | 54 |
| 7. Reaction between adsorbed O and H ₂ on nickel surfaces | 55 |
| 8. Oxidation of hydrogen over silver | 56 |
| 9. Reaction between adsorbed O and H ₂ on iridium | 57 |
| 10. Reaction of H ₂ and O ₂ with both components in the gas phase | 57 |
| 10.1 Molecular beam studies | 57 |
| 10.1.1 Pt surfaces | 57 |
| 10.1.2 Pt{111} surfaces | 59 |
| 11. Kinetic studies of H ₂ —O ₂ reaction over polycrystalline platinum | 60 |
| 11.1 Bulk polycrystalline platinum | 60 |
| 11.2 H ₂ —O ₂ reaction on supported polycrystalline platinum | 63 |
| 11.2.1 Kinetics of reaction | 63 |
| 11.2.2 Stoichiometry of H ₂ —O ₂ reaction | 64 |
| 12. Kinetic oscillations in the H ₂ —O ₂ reaction | 65 |
| 13. Electrochemical studies | 66 |
| 14. Summary and conclusions | 68 |
| References | 70 |

Chapter 3 (T. Engel and G. Ertl)

| | |
|---|----|
| Oxidation of carbon monoxide | 73 |
| 1. Introduction | 73 |
| 2. Adsorption | 74 |
| 2.1 Carbon monoxide | 74 |
| 2.2 Carbon dioxide | 78 |
| 2.3 Oxygen | 78 |
| 3. Surface interactions | 81 |
| 4. Reaction mechanism | 83 |
| 5. Energy diagram and reaction dynamics | 87 |
| 6. Reaction kinetics | 89 |
| 7. Catalysis under “real” conditions | 91 |
| References | 92 |

Chapter 4 (M.A. Barteau and R.J. Madix)

| | |
|---|-----|
| The surface reactivity of silver: oxidation reactions | 95 |
| 1. Introduction | 95 |
| 1.1 Ethylene oxidation | 95 |
| 1.2 Methanol oxidation | 98 |
| 2. Adsorption of oxygen on silver | 100 |
| 2.1 “High-pressure” studies | 100 |
| 2.2 Single crystal studies. An overview | 101 |
| 2.3 Oxygen adsorption on Ag{110} | 102 |
| 2.3.1 Adsorption and the adsorbed layer | 102 |
| 2.3.2 Thermal desorption | 108 |
| 2.3.3 Molecularily adsorbed oxygen | 111 |
| 3. CO oxidation | 113 |
| 3.1 Power studies | 113 |
| 3.2 Single crystal studies | 115 |
| 3.3 Formation and decomposition of surface carbonates | 117 |

| | |
|--|-----|
| 4. Oxidation reactions on Ag {110} | 119 |
| 4.1 Adsorption on the clean surface | 119 |
| 4.1.1 Adsorption of inorganic species | 119 |
| 4.1.2 Adsorption of organic species | 120 |
| 4.2 Reactions with oxygen | 120 |
| 4.2.1 Carboxylic acids | 121 |
| 4.2.2 Alcohols | 124 |
| 4.2.3 Water | 126 |
| 4.2.4 Aldehydes | 127 |
| 4.2.5 Esters | 129 |
| 5. Acid-base reactions | 130 |
| 5.1 Proton transfer reactions (Brönsted properties) | 130 |
| 5.2 Nucleophilic reactions (Lewis properties) | 131 |
| 5.3 Induced adsorption ("soft" Lewis acid-base interactions) | 133 |
| 5.4 Some principles of surface acid-base reactions | 135 |
| 6. Discussion | 136 |
| 7. Conclusion | 138 |
| Acknowledgements | 139 |
| References | 139 |

Chapter 5 (M. Grunze)

| | |
|--|-----|
| Synthesis and decomposition of ammonia | 143 |
| 1. Introduction | 143 |
| 2. Ammonia synthesis and decomposition on iron | 145 |
| 2.1 The adsorption of nitrogen on well-defined iron surfaces | 147 |
| 2.1.1 The nature of adsorbed nitrogen species on iron | 147 |
| 2.1.2 Kinetics and structure sensitivity of nitrogen adsorption on iron | 148 |
| 2.2 Hydrogen adsorption on iron | 152 |
| 2.3 The adsorption and decomposition of NH ₃ on iron surfaces | 154 |
| 2.3.1 Low-temperature adsorption and decomposition of NH ₃ | 155 |
| 2.3.2 Decomposition of NH ₃ at elevated temperatures | 159 |
| 2.4 Ammonia formation on iron | 161 |
| 2.5 Promoter and inhibitor effects in the synthesis of NH ₃ on iron | 164 |
| 2.6 The energetics of the synthesis of NH ₃ on iron | 166 |
| 3. Decomposition and synthesis of ammonia on metals other than iron | 168 |
| 3.1 Nickel | 168 |
| 3.2 Platinum, palladium and copper | 170 |
| 3.2.1 Recent results | 175 |
| 3.3 Ruthenium and rhenium | 176 |
| 3.4 Tungsten and molybdenum | 177 |
| 4. Comparison of the data on various metals and conclusions | 186 |
| Acknowledgements | 191 |
| References | 191 |

Chapter 6 (T. Engel and G. Ertl)

| | |
|--|-----|
| The H ₂ -D ₂ exchange reaction | 195 |
| 1. Introduction | 195 |
| 2. The interaction of H ₂ and D ₂ with metal surfaces | 196 |
| 3. The reaction mechanism for the H ₂ -D ₂ exchange | 197 |
| 4. The dependence of the H ₂ -D ₂ exchange rate on the substrate temperature | 199 |

| | |
|--|-----|
| 5. Structural factors in the H ₂ —D ₂ exchange reaction: H ₂ —D ₂ exchange on platinum | 202 |
| 6. H ₂ —D ₂ exchange coupled with absorption | 206 |
| 7. H ₂ —D ₂ exchange with activated adsorption | 207 |
| 8. Angular and velocity distributions of the reaction product HD | 210 |
| 9. Summary | 214 |
| References | 215 |

Chapter 7 (S.M. Davis and G.A. Somorjai)

| | |
|--|------------|
| Hydrocarbon conversion over metal catalysts | 217 |
| 1. General remarks | 217 |
| 1.1 Reaction types | 218 |
| 1.2 Concepts | 220 |
| 2. Methodology | 222 |
| 2.1 Supported catalyst systems | 223 |
| 2.2 Experimental methods for studies of model catalysts | 225 |
| 3. Model catalysts: structure and stability of single crystal surfaces | 228 |
| 3.1 Structural and electronic properties of stepped crystal surfaces | 229 |
| 3.2 Restructuring of stepped crystal surfaces in the presence of adsorbates | 233 |
| 4. Adsorption and catalysis at the platinum—organic interface | 234 |
| 4.1 Variations in structure sensitivity, rates and reaction probabilities over 10 orders of magnitude pressure range | 235 |
| 4.2 Temperature-dependent composition of the metal—organic layer | 237 |
| 4.3 Metal—organic fragments: active sites, promoters, or poisons? | 244 |
| 5. Model catalytic studies at low pressures ($\leq 10^{-4}$ Torr) | 249 |
| 5.1 Structure sensitivity of H—H, C—H, and C—C bond breaking over clean platinum surfaces | 249 |
| 5.2 Structure-sensitive deactivation of clean platinum surfaces during hydrocarbon conversion at low pressure | 252 |
| 5.3 Cyclization at low pressures | 254 |
| 5.4 Synthetic metal monolayer catalysts | 255 |
| 5.5 The effect of surface oxygen on hydrocarbon conversion over platinum | 257 |
| 6. Model catalytic studies at high reactant pressures | 261 |
| 6.1 Structure sensitivity of model reforming reactions | 262 |
| 6.2 Identical activities of model and practical catalysts for structure-insensitive reactions over platinum and nickel | 265 |
| 6.3 Influence of chemical additives | 267 |
| 6.3.1 Carbonaceous deposits | 267 |
| 6.3.2 Surface oxygen | 270 |
| 6.3.3 Calcium oxide impurities | 272 |
| 7. Hydrocarbon conversion over practical catalysts | 273 |
| 7.1 Hydrogenolysis reactions | 273 |
| 7.1.1 Alkane hydrogenolysis | 273 |
| 7.1.2 Ring opening and hydrodealkylation | 280 |
| 7.2 Olefin hydrogenation and double bond migration reactions | 283 |
| 7.3 Dehydrogenation | 286 |
| 7.4 Isomerization and cyclization reactions | 287 |
| 7.4.1 Isomerization | 287 |
| 7.4.2 Cyclization | 291 |
| 8. Conclusion | 293 |

| | |
|------------------------------------|-----|
| Acknowledgement | 294 |
| References | 294 |
| Appendix | 298 |
| References for Tables 1A—4E | 361 |

Chapter 8 (V. Ponec)

| | |
|--|-----|
| Exchange and reforming reactions of hydrocarbons on metals and alloys | 365 |
| 1. Introduction | 365 |
| 2. Exchange reactions of hydrocarbons with deuterium | 366 |
| 2.1 Introduction. Basic principles | 366 |
| 2.2 Chemisorption complexes of hydrocarbons | 370 |
| 2.2.1 Metal—carbon (single) bond | 370 |
| 2.2.2 Metal—carbon multiple bonds | 371 |
| 2.2.3 Multi (double) site complexes ($\alpha\beta$, $\alpha\gamma$, $\alpha\delta$...) | 373 |
| 2.3 Surface complexes formed by olefin chemisorption | 375 |
| 3. Structures of complexes and mechanistic conclusions derived from reactions of “archetype”-molecules | 379 |
| 4. The influence of alloying on the behaviour of metals | 381 |
| 5. Basic ideas on the mechanism of reforming reactions on metals and alloys | 385 |
| References | 391 |

Chapter 9 (W.F. Egelhoff, Jr.)

| | |
|-------------------------------|-----|
| Nitric oxide reduction | 397 |
| 1. Introduction | 397 |
| 2. Supported catalysts | 398 |
| 3. Single crystal surfaces | 409 |
| 3.1 General remarks | 409 |
| 3.2 Platinum and palladium | 409 |
| 3.3 Iridium and rhodium | 413 |
| 3.4 Ruthenium | 417 |
| 3.5 Copper and nickel | 420 |
| 3.6 Other metals | 422 |
| 4. Conclusions | 423 |
| References | 424 |

Chapter 10 (R.D. Kelley and D.W. Goodman)

| | |
|---|-----|
| The methanation reaction | 427 |
| 1. Introduction | 427 |
| 2. Co-adsorption studies | 428 |
| 3. High-pressure—UHV catalysis | 430 |
| 3.1 Apparatus and techniques | 431 |
| 3.2 Reaction kinetics over clean Ni single crystals | 433 |
| 3.2.1 Crystal preparation | 433 |
| 3.2.2 Rate measurements on clean Ni{100} | 434 |
| 3.2.3 Catalyst surface characterization | 437 |
| 3.2.4 Carbide deposition from pure CO | 438 |
| 3.2.5 Carbide reaction in H ₂ | 440 |
| 3.2.6 Mechanism of the methanation reaction over Ni | 441 |
| 3.2.7 Pressure effects on reaction rate | 441 |
| 4. Comparison with other transition metals | 444 |

| | |
|---|------------|
| 5. Adatom modification of catalyst reactivity | 446 |
| 6. Higher hydrocarbon production. Fischer-Tropsch reactions | 450 |
| 7. Summary | 453 |
| Acknowledgement | 453 |
| References | 453 |
| Index | 455 |
