| Preface | vii |
| <i>Chapter 1 (J.K. Nørskov)</i> | |
| Adsorbate-adsorbate interactions on metal surfaces | |
| 1. Introduction | 1 |
| 2. The effective medium theory | 2 |
| 3. The direct electrostatic interaction | 4 |
| 3.1 Interactions between atomic adsorbates | 6 |
| 3.2 The interaction between a pre-adsorbed atom and an adsorbing molecule - poisoning and promotion | 6 |
| 3.3 Adsorbates in an external electrostatic field | 10 |
| 3.4 Vibrational frequency shifts | 11 |
| 4. Direct and indirect hybridization effects | 13 |
| 4.1 Interactions in metal overlayers | 14 |
| 4.2 Indirect interactions between adsorbed gas atoms and molecules | 18 |
| 5. The elastic interaction between adsorbates | 22 |
| 6. Concluding remarks | 24 |
| Acknowledgements | 24 |
| References | 24 |
| <i>Chapter 2 (J.E. Müller)</i> | |
| Theory of the coadsorption of H₂O and CO with K on the Pt(111) surface | |
| 1. Introduction | 29 |
| 2. Adsorption of H ₂ O on Pt(111) | 30 |
| 3. Adsorption of CO on Pt(111) | 33 |
| 4. Adsorption of K on Pt(111) | 36 |
| 5. Qualitative aspects of the coadsorption of K with H ₂ O and CO | 39 |
| 6. Coadsorption of K and H ₂ O on Pt(111) | 41 |
| 7. Coadsorption of K and CO on Pt(111) | 42 |
| Appendix: Charge transfer in closed shell systems | 48 |
| References | 49 |

Chapter 3 (H.P. Bonzel and G. Pirug)

Interaction between alkali metal adsorbates and adsorbed molecules (CO; H₂O)

| | |
|--|-----|
| 1. Introduction | 51 |
| 2. Model experiments of catalyst promotion | 52 |
| 3. Coadsorption: alkali metal and CO | 53 |
| 3.1 Sticking coefficient and adsorption energy of CO | 53 |
| 3.2 Electronic interaction | 58 |
| 3.2.1 Occupied electronic levels | 58 |
| 3.2.2 Unoccupied valence electron states | 62 |
| 3.2.3 CO bond length | 64 |
| 3.2.4 Vibrational frequencies | 66 |
| 3.2.5 Work function changes | 73 |
| 3.3 CO orientation | 74 |
| 3.3.1 Background | 74 |
| 3.3.2 Angle-resolved ESD and metastable quenching spectroscopy | 75 |
| 3.3.3 Angle-resolved AES, XPD and NEXAFS | 77 |
| 3.3.4 Role of substrate reconstruction | 78 |
| 3.3.5 Structure of ordered coadsorbed layers (LEED) | 81 |
| 3.4 Molecular versus dissociative CO adsorption | 83 |
| 3.4.1 Spectroscopy of CO dissociation | 83 |
| 3.4.2 Isotope exchange: CO/K on Ni(111) | 88 |
| 3.5 Short range versus long range interaction | 89 |
| 3.5.1 Overview | 89 |
| 3.5.2 Examples for long range interaction | 91 |
| 3.5.3 Coadsorption and/or compound formation? | 94 |
| 4. Coadsorption: alkali metals and H ₂ O | 95 |
| 4.1 Sticking coefficient and adsorption energy | 95 |
| 4.2 H ₂ O dissociation | 95 |
| 4.3 H ₂ O orientation | 100 |
| 5. Coadsorption of alkali metals and other molecules | 103 |
| Acknowledgements | 105 |
| References | 105 |

Chapter 4 (X.-C. Guo and D.A. King)

Coadsorption of carbon monoxide and hydrogen on metal surfaces

| | |
|--------------------------------|-----|
| 1. Introduction | 113 |
| 2. CO + H on iron | 117 |
| 2.1 Fe{100}: TDS, LEED and XPS | 117 |

| | |
|---|-----|
| 2.2 Fe{111}: XPS and UPS | 119 |
| 3. CO + H on iridium | 120 |
| 3.1 Ir{110}: TDS and $\Delta\phi$ | 120 |
| 4. CO + H on nickel | 121 |
| 4.1 Ni{100}: TDS, LITD, HREELS, RAIRS, LEED, NEXAFS, $\Delta\phi$, UPS, XPS, ELS, IPE and FYNES | 122 |
| 4.1.1 Kinetics of desorption, adsorption and surface diffusion | 122 |
| 4.1.2 Vibrational properties | 123 |
| 4.1.3 Geometrical structures | 125 |
| 4.1.4 Electronic structures | 126 |
| 4.2 Ni{110}: TDS, LEED, HREELS, RAIRS, ARUPS and IPE | 127 |
| 4.2.1 Single adsorption of CO and H_2 | 127 |
| 4.2.2 Desorption spectra and LEED studies | 128 |
| 4.2.3 Vibrational properties and inverse photoemission | 130 |
| 4.3 Ni{111}: TDS, LEED, HREELS and UPS | 131 |
| 5. CO + H on palladium | 132 |
| 5.1 Pd{100}: TDS, LEED, $\Delta\phi$ and HREELS | 133 |
| 5.2 Pd{110}: LEED, $\Delta\phi$ and TDS | 135 |
| 5.3 Pd{111}: TDS and LEED | 136 |
| 6. CO + H on platinum | 137 |
| 6.1 Pt{100}: LEED | 137 |
| 6.2 Pt{111}: TDS, ESD, LEED, TEAS, LITD, RAIRS and FYNES | 138 |
| 7. CO + H on rhodium | 140 |
| 7.1 Rh{111}: TDS and LEED | 140 |
| 7.2 Rh{100}: TDS, LEED, HREELS, $\Delta\phi$, UPS, XPS and ELS | 142 |
| 7.2.1 H on CO/Rh{100} | 142 |
| 7.2.2 CO on H/Rh{100} | 143 |
| 8. CO + H on ruthenium | 145 |
| 8.1 Ru{110}: TDS, $\Delta\phi$ and UPS | 146 |
| 8.2 Ru{001}: TDS, $\Delta\phi$, XPS, UPS and LITD | 146 |
| 9. CO + H on tungsten | 148 |
| 9.1 W{100}: TDS, $\Delta\phi$, UPS and HREELS | 148 |
| 10. Summary | 150 |
| Acknowledgements | 152 |
| References | 152 |

*Chapter 5 (W.K. Kuhn, R.A. Campbell and D.W. Goodman)***Adsorption on bimetallic surfaces**

| | |
|--|-----|
| 1. Introduction | 157 |
| 2. Atomic structure of bimetallic systems | 158 |
| 3. Metal-metal bonding in bimetallic systems | 163 |
| 4. Chemisorptive properties of bimetallic system | 170 |
| 5. Conclusions | 179 |
| Acknowledgement | 180 |
| References | 180 |

*Chapter 6 (B.E. Nieuwenhuys)***The chemical properties of alloy single crystal surfaces**

| | |
|--|-----|
| 1. Introduction | 185 |
| 2. Pd-Cu, Pd-Ag and Pd-Au single crystal surfaces | 188 |
| 3. Pt-Ti, Pt-Co, Pt-Ni and Pt-Fe single crystal surfaces | 198 |
| 4. Pt-Rh single crystal surfaces | 207 |
| 5. General discussion | 216 |
| Acknowledgements | 221 |
| List of abbreviations | 221 |
| References | 222 |

*Chapter 7 (M. Bowker)***Promotion in ammonia synthesis**

| | |
|---|-----|
| 1. Introduction | 225 |
| 2. Substrate dependence of nitrogen adsorption and ammonia synthesis | 229 |
| 3. Nitrogen dissociation on Fe - is it activated? | 232 |
| 4. Ammonia synthesis on single crystals | 236 |
| 5. Promotion - generalities | 237 |
| 6. The effects of promotion on nitrogen dissociation and ammonia synthesis | 246 |
| 6.1 Promoters on catalysts | 246 |
| 6.2 Promoters on single crystals | 251 |
| 7. Theoretical modelling | 255 |
| 8. Conclusions | 257 |
| 8.1 The rate determining step | 257 |
| 8.2 The 'active site' | 259 |
| 9. Problems to be solved | 259 |

| | |
|------------------------------------|-----|
| 9.1 Nitrogen dissociation kinetics | 260 |
| 9.2 Structure of the 'active site' | 261 |
| 9.3 Reaction modelling | 261 |
| 10. Future prospects | 262 |
| References | 265 |

Chapter 8 (R.W. Joyner)

Promotion in the Fischer-Tropsch hydrocarbon synthesis

| | |
|--|-----|
| 1. Introduction | 269 |
| 2. Catalysts and promoters for the Fischer-Tropsch synthesis | 270 |
| 3. The mechanism of the Fischer-Tropsch reaction | 271 |
| 4. Studies of the reaction using single crystal surfaces | 272 |
| 4.1 Nickel | 272 |
| 4.2 Iron | 273 |
| 4.3 Cobalt | 277 |
| 4.4 Ruthenium | 282 |
| 5. Conclusions | 284 |
| References | 284 |

Chapter 9 (C.T. Campbell)

Promoters and poisons in the water-gas shift reaction

| | |
|--|-----|
| 1. Introduction | 287 |
| 2. Sulfur poisoning of Cu catalysts | 289 |
| 3. Cesium promotion of Cu catalysts | 291 |
| 3.1 Influences of Cs on the steady-state catalytic kinetics | 291 |
| 3.2 Influence of Cs on the kinetics of elementary steps | 294 |
| 3.3 The structure and role of the Cs promoter in water-gas shift over Cu | 302 |
| 3.4 Cesium promotion of the methanol synthesis reaction over Cu | 305 |
| 4. Conclusions | 308 |
| Acknowledgements | 309 |
| References | 309 |

Chapter 10 (J.P.S. Badyal)

Strong metal-support interactions

| | |
|------------------------------------|-----|
| 1. Introduction | 311 |
| 1.1 Original work by Tauster et al | 312 |
| 1.2 SMSI characteristics | 313 |

| | |
|---|------------|
| 2. Bulk titania | 314 |
| 2.1 Structural properties of TiO ₂ | 314 |
| 2.2 Electronic structure of TiO ₂ | 315 |
| 2.3 Chemisorptive properties of TiO ₂ | 315 |
| 3. Possible explanations for SMSI | 316 |
| 3.1 Strongly adsorbed hydrogen on the metal surface | 316 |
| 3.2 Competitive chemisorption between H ₂ and CO | 317 |
| 3.3 Charge transfer between metal and support | 317 |
| 3.4 Cluster formation | 319 |
| 3.5 Support held hydrogen | 319 |
| 3.6 The decoration model | 320 |
| 3.7 Interfacial metal-support interaction (IMSI) | 325 |
| 3.8 Oxygen vacancy model | 326 |
| 3.9 Surface site transfer | 326 |
| 3.10 Junction effect theory | 326 |
| 4. The Ru/TiO₂ catalyst: a case study | 327 |
| 4.1 Ti/Ru(0001) | 328 |
| 4.2 Ti _x Ru _y (0001) alloy surfaces | 329 |
| 4.3 TiO _x /Ru(0001) | 330 |
| 4.4 TiO _x Ru _y | 331 |
| 4.5 Model dispersed catalysts | 332 |
| 4.6 The Ru/TiO ₂ catalyst | 333 |
| 4.7 Conclusions | 334 |
| Acknowledgements | 334 |
| References | 334 |
| Index | 341 |
