

Contents

1. Argon and Its Companions. By M.L. Klein	1
1.1 Prologue: Inert, Rare or Noble?	1
1.2 Research with Inert Gases	1
1.3 Outline of the Present Book	2
References	3
2. Interatomic Potentials for Rare-Gases: Pure and Mixed Interactions	
By R.A. Aziz (With 38 Figures)	5
2.1 Background	5
2.2 What Probes What?	8
2.2.1 Bulk Properties	8
2.2.2 Molecular-Beam Experiments	8
2.2.3 Spectroscopic Data	10
2.3 Review of Recent Research on Pure Interactions	10
2.3.1 Helium	10
2.3.2 Neon	14
2.3.3 Argon	17
2.3.4 Krypton	26
2.3.5 Xenon	27
2.4 Review of Recent Research on Unlike Interactions	30
2.4.1 Helium-Rare-Gas Systems (He-Ne, He-Ar, He-Kr and He-Xe)	30
2.4.2 Neon-Rare-Gas Systems (Ne-Ar, Ne-Kr, Ne-Xe)	44
2.4.3 Argon-Krypton, Argon-Xenon, Krypton-Xenon	47
2.5 Combining Rules	65
2.5.1 Berthelot-Lorentz Rules	65
2.5.2 Kohler Rules	65
2.5.3 Hudson-McCoubrey Rules	66
2.5.4 Fender-Halsey Rules	66
2.5.5 Sikora Rules	66

2.5.6	Hiza-Duncan Rules	67
2.5.7	Total Cross-Section Rules	67
2.6	Conclusions	69
Appendix:		
2.A	Interatomic Potential Functions	70
2.B	Interatomic Potential Parameters	75
2.C	Predictions of Collisions Cross-Sections by Potentials ..	80
References	82

3. Dynamics of Impure Rare-Gas Crystals

By S.S. Cohen and M.L. Klein (With 33 Figures)		87
3.1	Background	87
3.2	Lattice Dynamics of Impure Crystals	90
3.2.1	Historical Review	90
3.2.2	Pure Crystals	92
3.2.3	An Isolated Impurity	95
3.2.4	Central Force-Constant Model	97
3.2.5	Far-Infrared Absorption	100
3.2.6	Mössbauer Effect	102
3.2.7	Heat Capacity	104
3.2.8	Neutron Scattering	105
3.3	Theoretical Studies	107
3.3.1	Application of the CFC Model	107
	a) Potentials	107
	b) Relaxation Effects	108
	c) Three-Body Forces	108
	d) Phonon Density of States	109
3.3.2	Computer Simulation	110
3.4	Experimental Studies	111
3.4.1	Rare Gases in RGS	111
	a) Argon Doped with Krypton	112
	b) Argon Doped with Neon	114
	c) Argon Doped with Helium	115
	d) Argon Doped with Xenon	116
	e) Krypton Doped with Argon	116
	f) Krypton Doped with Xenon	117
3.4.2	Molecules in RGS	118

a) Homonuclear Diatomics	118
b) Heteronuclear Diatomics	127
c) RGS Doped with Methane	132
3.4.3 Matrix-Isolated Species	137
a) Molecular Ions	137
b) Molecules	137
c) Atoms	138
3.5 Summary	139
References	140

4. Spectroscopy of Vibrational and Rotational Levels of Diatomic

Molecules in Rare-Gas Crystals. By H. Dubost (With 18 Figures)	145
4.1 Background	145
4.2 Experimental Techniques and Results	148
4.2.1 Experimental Techniques	148
a) Sample Preparation	148
b) Spectroscopy (Conventional Versus Laser)	149
c) Saturation Spectroscopy or Hole Burning	150
d) Time-Resolved Spectroscopy	151
4.2.2 Spectroscopic Studies of Ground Electronic State Molecules	153
a) Vibrational Transitions	157
b) Rotational Transitions	157
c) Phonon Sidebands	159
4.2.3 Time-Resolved Experiments	161
a) Infrared Spectroscopy	161
b) Visible Spectroscopy	165
4.3 Intermolecular Interaction in Rare-Gas Crystals Containing Molecular Defects	168
4.3.1 Intermolecular Potential Between a Rare-Gas Atom and a Diatomic Molecule	168
a) Atom-Atom Potential	169
b) Multiparameter Potential Functions	169
c) Ab Initio Potential Surfaces	172
d) Charge Transfer and Hydrogen Bonding	173
4.3.2 The Interaction Hamiltonian	173
a) Energy Levels	176
b) Relaxation Processes	176

4.4	Perturbation of Energy Levels	176
4.4.1	Influence of a Diatomic Impurity on Lattice Energies ..	176
	a) Effect of Isotropic Terms	177
	b) Effect of Internal Molecular Motions	179
	c) Description of Lattice Vibrations Through Molecular Dynamics	180
	d) Phonon Sidebands in IR Spectra of the Guest Molecule	181
4.4.2	Perturbation of the Molecular Energy Levels	182
	a) Vibrational Matrix Shift	182
	b) Rotational Matrix Shift	187
4.5	Population Relaxation Processes	196
4.5.1	Radiative Relaxation	197
4.5.2	Vibrational Relaxation to Phonons	198
4.5.3	Vibration to Rotation Energy Transfer	203
4.5.4	Vibrational Energy Transfer	209
	a) Microscopic Processes Among Molecules in Rare-Gas Crystals	212
	b) Microscopic Probabilities for Vibrational Energy Transfer	214
	c) Macroscopic Kinetics for Vibrational Energy Transfer	221
	d) Comparison Between Theory and Experiment	226
4.5.5	Radiationless Rotational Relaxation	232
	a) The Direct Process	233
	b) Raman and Orbach Processes	233
4.6	Spectral Line Shapes and Dephasing Processes	235
4.6.1	Homogeneous Broadening: T_1 and T_2 Relaxation Processes	235
4.6.2	Vibrational Dephasing in Matrix-Isolated Molecules	237
4.6.3	Line Shape Function and Dephasing	239
	a) Isolated Vibrational Levels with a Large Spacing ...	241
	b) Additional Low-Energy Levels in the Molecule	243
4.6.4	Comparison Between Theory and Experiment	246
4.7	Concluding Remarks	249
	References	251
	Additional References with Titles	256
Subject Index	259
