

# CONTENTS

Preface . . . . .	iii
Editor's Note . . . . .	iv
E. BURSTEIN	
Optical Properties of a Dielectric Medium	
1. Introduction . . . . .	1
2. $\epsilon(\omega, q)$ and Spatial Dispersion . . . . .	2
3. $\epsilon(\omega)$ of an Assembly of Electric Dipole Oscillators . . . . .	6
4. Polaritons . . . . .	13
5. Experimental Determination of Optical Constants . . . . .	16
6. Oblique Incidence Transmission through thin Films . . . . .	21
7. Coupled Longitudinal Excitation . . . . .	26
References . . . . .	33
E. BURSTEIN	
Raman Scattering Phenomena	
1. Infrared Absorption and Raman Spectra . . . . .	34
2. Raman Scattering in Diamond-Type Crystals . . . . .	41
3. Raman Scattering in ZnS Type Crystals . . . . .	44
4. Raman Scattering by Plasmons in ZnS Type Crystals . . . . .	46
5. Electric Field Induced Infrared Absorption in Diamond-Type Crystals	52
6. Electric Field Induced Raman Scattering in NaCl and CsCl Type	
Crystals . . . . .	55
References . . . . .	58
J. BOK	
Plasma and Magneto-Plasma Phenomena in Solid State Optics	
1. Introduction . . . . .	59
2. Collective Oscillations . . . . .	59
3. Waves in Anisotropic Plasmas . . . . .	62
4. Applications . . . . .	70
4.1 Non-local effects . . . . .	70
4.2 Quantum effects . . . . .	72
4.3 Landau damping . . . . .	73
4.4 Electron-electron interaction . . . . .	73
References . . . . .	75
Tatsumi KUROSAWA	
Dielectric Dispersion in Solids	
1. Response Functions . . . . .	76
2. Properties of the Response Functions and Sum Rules . . . . .	78
3. Applications of the Sum Rules . . . . .	83
References . . . . .	89
Yutaka TOYOZAWA	
Vibration-Induced Structures in the Absorption Spectra of Localized	
Electrons in Solids	

1. Introduction . . . . .	90
2. Jahn-Teller Splitting . . . . .	90
3. Phonon Structures . . . . .	103
References . . . . .	115
<b>J. J. HOPFIELD</b>	
Effects of Electron-Electron Interactions on the Optical Properties of Metals	
1. Introduction . . . . .	116
2. The Soft X-ray Emission Spectrum of Lithium . . . . .	117
3. The Optical Absorption of Liquid Metals . . . . .	121
4. The Dielectric Response of Alkali Metals . . . . .	123
References . . . . .	126
<b>J. J. HOPFIELD</b>	
Elastic Scattering at Inelastic Thresholds. Application to Solids	
1. Introduction . . . . .	128
2. Review of Threshold Theory . . . . .	129
3. Reflectivity near Exciton Reflection Peaks . . . . .	133
4. Absorption Anomalies in GaP . . . . .	136
5. The Kondo Divergence . . . . .	140
6. Conclusion . . . . .	142
References . . . . .	142
<b>J. C. PHILLIPS</b>	
Optical Spectra of Solids	
1. Introduction . . . . .	144
2. Semiconductors . . . . .	144
3. Rare Gas Solids and Alkali Halides . . . . .	152
4. Noble Metals . . . . .	161
5. Conclusions . . . . .	164
References . . . . .	165
<b>H. HAKEN</b>	
Dynamics of Nonlinear Interaction between Radiation and Matter	
1. Introduction . . . . .	168
2. Single Mode Operation . . . . .	172
2.1 Some simplifications . . . . .	172
2.2 Qualitative discussion . . . . .	174
2.3 Quantitative treatment . . . . .	177
3. Qualitative Discussion of Two-mode Operation in a Homogeneously Broadened Line . . . . .	183
3.1 The equations of motion . . . . .	183
3.2 Both modes well below threshold . . . . .	185
3.3 Modes somewhat above or somewhat below threshold . . . . .	185
3.4 Two modes above threshold . . . . .	187
4. Three-modes. Phase-locking . . . . .	190
References . . . . .	192

M. LAX

## Quantum Theory of Noise in Masers and Lasers

1. What We Wish to Predict . . . . .	195
2. Variables of the Problem . . . . .	196
3. Quantum Theory of Damping . . . . .	198
4. Random Process Definitions . . . . .	201
5. Regression Theorem for Markoff Processes . . . . .	203
6. Drift Vectors and Diffusion Constants . . . . .	204
7. Langevin Noise Source Formulation . . . . .	206
8. Quantum Langevin Formulation . . . . .	208
9. Generalized Einstein Relation . . . . .	208
10. Noise Sources for a Damped Harmonic Oscillator . . . . .	209
11. Validity of Operator Equations for the Harmonic Oscillator . . . . .	210
12. Motion of a General Operator . . . . .	211
13. Equation for the Distribution Function . . . . .	213
14. Coherent State Representation . . . . .	215
15. Atomic Noise Sources . . . . .	220
16. Summary of Methods . . . . .	223
17. Black Box Model of a Homogeneously Broadened Maser . . . . .	227
18. Quantum Adiabatic Elimination of $\sigma$ . . . . .	229
19. Motion of a General Operator . . . . .	231
20. Field and Population Fluctuations . . . . .	233
21. Field Fluctuations Alone . . . . .	234
22. Spectrum of the Scaled Rotating Wave Van der Pol Oscillator . . . . .	237
23. Epilogue . . . . .	242
References . . . . .	243
