

## CONTENTS

Fritz London: 1900–1954, an appreciation of his work by L. W. Nordheim	v
Fritz London: A Brief Biography by Edith London	x
List of Publications of Fritz London	xv
Introduction	1
A. Some Properties of Superconductors and Their Thermodynamical Correlation	10
§ 1. The Evolution of the Concept of the Pure Superconducting State and Its Basic Properties	10
§ 2. The Thermodynamics of the Transition from the Normal into the Superconducting State	16
B. The Electrodynamics of the Pure Superconducting State	27
§ 3. The Relation between Current and Field	27
§ 4. Simple Applications	34
§ 5. Measurements of the Penetration Depth	41
§ 6. The Superconducting Ring. Conservation Law of the Flux through a Ring	47
§ 7. General Proof of Perfect Diamagnetism	51
§ 8. Non-viscous Flow versus Superconductivity	53
§ 9. The Energy-Momentum Theorem	65
§ 10. The Superpotential. Gauge Invariance	70
§ 11. Uniqueness Theorems	73
§ 12. The Rotating Superconductor	78
§ 13. Micro-waves in Superconductors	83
§ 14. Field Dependence of the Penetration Depth and Long Range Order	91
C. The Intermediate State	96
§ 15. The Magnetostatics of the Intermediate State	97
§ 16. The Transition of a Superconducting Sphere in a Magnetic Field	103
§ 17. The Reality of the Domain Structure	106
§ 18. Electric Fields in the Intermediate State	110
§ 19. Superconductivity in the Intermediate State	118
§ 20. Transition of a Wire in which a Current Flows	120

<b>D. The Phase Transition into the Superconducting State Reconsidered</b>	<b>125</b>
§ 21. The Surface Energy between the Superconducting and the Normal Phases	125
§ 22. Phase Transition of Thin Superconducting Films	130
§ 23. Equilibrium on a Boundary between the Two Phases	137
<b>E. Program for the Molecular Theory of Superconductivity</b>	<b>142</b>
§ 24. One Single Equilibrium State	142
§ 25. Long Range Order of the Average Momentum	144
§ 26. Order of Momentum and Quantum Kinematics	146
<b>F. Epilogue: Theoretical Developments 1950–1960 by M. J. Buckingham</b>	<b>156</b>
<b>Introduction</b>	<b>156</b>
§ 1. The Interaction Responsible for Superconductivity	157
§ 2. New Experimental Results	159
§ 3. Charged Ideal Bose Gas	160
§ 4. Pair Correlations	161
§ 5. The Bardeen-Cooper-Schrieffer Theory	163
§ 6. The Bogoliubov Theory	165
§ 7. Pair Correlations and Long Range Correlation	166
<b>Name Index</b>	<b>169</b>
<b>Subject Index</b>	<b>171</b>
