<i>Preface</i>	v
----------------	---

CHAPTER 1. Introduction

1.1 Principal Interaction Phenomena	1
1.2 Interaction Diagrams	3
References	8

Part I—General Principles

CHAPTER 2. Introduction to Tensor Analysis

2.1 Definitions of Tensors	11
2.2 Symmetry Properties of Tensors	13
2.3 Contraction of Tensors	14
2.4 Transformation of Tensors from One Set of Axes to Another	15
2.5 Vector and Scalar Products—Gradient, Divergence, and Curl of Vectors	16
2.6 The Representation Quadric	18
2.7 Tensors Involving the Direction Cosines a_{ij}	23
2.8 Polar and Axial Vectors	27
2.9 Some Integral Theorems of Interest	29
Resume	32
Problems	34
References	35

CHAPTER 3. Definition of Fundamental Variables Involved in Interaction Effects

3.1 Electric Fields and Displacements	36
3.2 Magnetic Variables	41
3.3 Maxwell's Equations in Tensor Form	48
3.4 Stress Tensors	50
3.5 Strain Tensors	57
3.6 Elasticity	63
3.7 Thermal Variables	69
Resume	75
Problems	77
References	78

CHAPTER 4. Equilibrium Thermodynamics, Thermodynamic Functions, and Maxwell Relations

4.1	Thermodynamic Functions for Mechanical and Thermal Variables	79
4.2	Thermodynamic Functions for Mechanical, Electrical, and Thermal Variables for Piezoelectric Crystals	82
4.3	Numerical Values for Interaction Effects	90
4.4	Electrostrictive Properties of Ferroelectric Materials	94
4.5	Magnetostrictive and Piezomagnetic Properties of Ferromagnetic Materials	100
	Resume	104
	Problems	106
	References	106

CHAPTER 5. Crystal Symmetries and Their Effects on Tensor Properties

5.1	Crystal Systems, Crystal Classes, and Miller Indices	108
5.2	Crystal Point-Group Symmetries	112
5.3	Effects of Symmetries on the Macroscopic Properties of Crystals	116
	Resume	119
	Problems	120
	References	121

Part II—Application of Equilibrium Interaction Processes

CHAPTER 6. Applications of Piezoelectric and Piezomagnetic Materials to Transducers

6.1	Introduction	125
6.2	Properties of Principal Piezoelectric Crystals	126
6.3	Wave Transmission in Piezoelectric Crystals—Equivalent Circuits	136
6.4	Design of Transducers from Equivalent Circuits	146
6.5	Alteration of the Equivalent Circuit Caused by the Axial Nature of Magnetism	152
	Resume	154
	Problems	155
	References	156

CHAPTER 7. Crystal Optics and the Electro-optic and Piezo-optic Effects

7.1	Introduction	157
7.2	The Indicatrix Ellipsoid	158

7.3	Uses for the Optical Properties of Crystals	163
7.4	Thermodynamic Derivation of Electro-optic and Piezo-optic Effects	165
7.5	Birefringence along Any Direction in the Crystal and Determination of the Electro-optic and Piezo-optic Constants	170
7.6	Quadratic Electro-optic ("Kerr") Effect in Cubic Crystals	176
7.7	Piezo-optic Effect in Isotropic Materials	180
	Resume	183
	Problems	186
	References	187

CHAPTER 8. Optical Activity and the Faraday Effect

8.1	Introduction	188
8.2	Optical Activity and Birefringence	190
8.3	Optical Rotation Due to the Faraday Effect	194
8.4	Microwave Faraday Effect	197
8.5	Cotton-Mouton Effect	198
	Resume	200
	Problems	203
	References	203

Part III—Transport Crystalline Properties That Depend on Irreversible Thermodynamics

CHAPTER 9. Thermal and Electrical Conductivities

9.1	Introduction: Nonreversible Thermodynamics	207
9.2	Thermal Conductivities and Resistivities	210
9.3	Electrical Conductivity	216
	Resume	217
	Problems	219
	References	220

CHAPTER 10. Piezoresistivity

10.1	Introduction: Energy Surfaces and Electron Flows	221
10.2	Phenomenological Development of Piezoresistivity	227
10.3	Best Orientations for Measuring Strains	231
	Resume	237
	Problems	240
	References	240

CHAPTER 11. Hall Effect and Magnetoresistance Effect and Their Uses in Transducers

11.1	Introduction	241
11.2	Phenomenological Derivation of Hall and Magnetoresistance Effects	246
11.3	Applications of the Hall and Magnetoresistance Effects	258
	Resume	263
	Problems	265
	References	266

CHAPTER 12. Thermoelectricity

12.1	Introduction	267
12.2	Derivation of Thermoelectric Effects in Isotropic Solids	268
12.3	Thermoelectric Effects in Continuous Isotropic Media	272
12.4	Practical Applications of the Thermoelectric Effect	276
12.5	Thermoelectric Effects in Continuous Anisotropic Media	282
12.6	Effect of Magnetic Flux on Thermoelectric Properties	285
	Resume	292
	Problems	298
	References	298

APPENDIX A. Electromagnetic Wave Propagation in a Crystalline Medium

A.1	Solution of Maxwell's Equations	301
A.2	Derivation of the Indicatrix and Fresnel's Ellipsoids from Maxwell's Equations	305
A.3	Effect of Optical Activity on the Transmission of Light Waves in Crystals	309
A.4	Rotation of Light Waves Due to the Faraday Effect	318
	References	324

APPENDIX B. Tables of Tensor Terms for Polar and Axial Tensors

B.1	Tables of Polar Tensors	326
B.2	Tables of Axial Tensors	334
B.3	Third-Order Elastic Moduli	340
	References	340
