## I. An Introduction to Channeling

M. W. THOMPSON

1.1	Introduction	1
1.2	Penetration experiments	3
1.3	Effect on nuclear and atomic processes	7
1.4	Backscattering experiments	10
1.5	Star patterns and forward-scattering	14
1.6	Surface scattering	17
1.7	Classical theory of channeling	18
1.8	The limits of classical mechanics	26
1.9	Electrons and positrons	31
1.10	Conclusions	33
	References	33

## II. The Continuum Model of Directional Effects

D. VAN VLIET

2.1	Introduction	37
2.2	Directional effects near atomic strings	40
2.3	Planar effects	50
2.4	The classification of trajectories	55
2.5	Multiple scattering	60
2.6	The rule of reversibility	65
2.7	The emission of particles from atoms in a string	66
2.8	The close-collision yield for an external ion beam	70
	Glossary of symbols	76
	References	77

## III. Computer Simulation of Channeling

D. V. MORGAN

3.1	Introduction	.
3.2	Computer models	.

3.3	Critical angles and critical approach distances . . . . .	83
3.4	Blocking and channeling half angles . . . . .	91
3.5	Dechanneling . . . . .	95
3.6	Flux enhancement . . . . .	104
3.7	Range calculations . . . . .	110
	References . . . . .	110
		113

**IV. Energy Loss of Channeled Ions: Low Velocity Ions**

J. M. POATE

4.1	Introduction . . . . .	115
4.2	Transmission studies . . . . .	117
4.3	Range studies . . . . .	122
4.4	Theories . . . . .	123
4.5	Projections . . . . .	128
	References . . . . .	129

**V. Energy Loss of Channeled Ions: High Velocity Ions**

G. DEARNALEY

5.1	Introduction . . . . .	131
5.2	The experimental data . . . . .	132
5.3	Theories . . . . .	144
5.4	Further work . . . . .	150
	References . . . . .	151

**VI. Detailed Studies of Channeled Ion Trajectories and Associated Channeling Potentials and Stopping Powers**

S. DATZ, B. R. APPLETON and C. D. MOAK

6.1	Introduction . . . . .	153
6.2	Planar channeling . . . . .	154
6.3	Axial potentials from hyperchanneling measurements . . . . .	175
6.4	Summary . . . . .	179
	References . . . . .	179

**VII. Dechanneling**

F. GRASSO

7.1	Introduction . . . . .	181
7.2	Experimental techniques . . . . .	183
7.3	Experimental results . . . . .	190
7.4	Dechanneling theory . . . . .	197

## *Contents*

xiii

7.5 Angular dips . . . . .	219
References . . . . .	223

## **VIII. Range Profiles**

J. L. WHITTON

8.1 Introduction . . . . .	225
8.2 Measurement of range profiles . . . . .	225
8.3 Range profiles in amorphous and polycrystalline targets . . . . .	231
8.4 Range profiles in single crystals . . . . .	233
8.5 Changes in range profile after implantation . . . . .	251
8.6 Summary . . . . .	254
8.7 Future experiments . . . . .	255
References . . . . .	256

## **IX. Radiation Damage**

R. S. NELSON

9.1 Introduction . . . . .	259
9.2 The observed nature of radiation damage . . . . .	260
9.3 Theoretical aspects . . . . .	267
9.4 Experimental evidence for the effect of channeling . . . . .	269
9.5 Dechanneling at defects . . . . .	279
9.6 Electron channeling . . . . .	281
References . . . . .	284

## **X. Channeling of $\beta$ -Particles**

L. T. CHADDERTON

10.1 Some important concepts . . . . .	287
10.2 The string . . . . .	291
10.3 The crystal . . . . .	298
10.4 Experiment . . . . .	321
10.5 Conclusion . . . . .	327
References . . . . .	328

## **XI. Scattering (Blocking) Patterns Applied to Crystallography**

C. S. BARRETT

11.1 Introduction . . . . .	331
11.2 Orientation or indexing . . . . .	333
11.3 Related types of patterns . . . . .	333
11.4 Observation of line intensities . . . . .	334
11.5 Line intensities and crystal structure . . . . .	334

11.6 Observed and calculated intensities . . . . .	338
11.7 Phase identification . . . . .	342
11.8 Thermal vibrations . . . . .	345
11.9 Ionography . . . . .	346
11.10 Alphagraphy and fissiography . . . . .	347
References . . . . .	347

## **XII. Blocking Measurements of Short Nuclear Decay Times**

W. M. GIBSON and M. MARUYAMA

12.1 Introduction . . . . .	349
12.2 Basic principles . . . . .	351
12.3 Typical results . . . . .	355
12.4 Analysis . . . . .	367
12.5 Conclusions and prognosis . . . . .	386
References . . . . .	387

## **XIII. Foreign Atom Location**

J. A. DAVIES

13.1 Basic principles . . . . .	392
13.2 Triangulation and lattice symmetry . . . . .	393
13.3 Foreign atom detection . . . . .	394
13.4 Substitutional case . . . . .	396
13.5 Flux distribution within the channel . . . . .	398
13.6 Some nonsubstitutional examples . . . . .	401
13.7 Double alignment . . . . .	408
13.8 Limitations . . . . .	410
13.9 Summary . . . . .	412
References . . . . .	413

## **XIV. Application to Radiation Damage**

F. H. EISEN

14.1 Introduction . . . . .	415
14.2 Dechanneling . . . . .	416
14.3 Sensitivity to various kinds of defects . . . . .	426
14.4 Depth scale . . . . .	428
14.5 Some practical considerations . . . . .	431
14.6 Summary . . . . .	433
Glossary of symbols . . . . .	433
References . . . . .	434

**XV. Application to Surface Studies**

E. BØGH

15.1	Introduction	. . . . .	435
15.2	Foundation of the method	. . . . .	436
15.3	Experimental equipment	. . . . .	442
15.4	Examples of application	. . . . .	446
15.5	Summary	. . . . .	450
	References	. . . . .	450

**XVI. Applications to Semiconductor Technology**

J. W. MAYER

16.1	Introduction	. . . . .	453
16.2	Lattice location of dopant species	. . . . .	454
16.3	Lattice disorder	. . . . .	457
16.4	Metal layers on semiconductors	. . . . .	462
16.5	Surface analysis	. . . . .	463
16.6	Beam effects	. . . . .	464
16.7	Ion implantation	. . . . .	467
	References	. . . . .	470
