

# CONTENTS

Preface	xiii
1. INTRODUCTION . . . . .	1-2
References	2
General bibliography	2
2. THE INTERACTION OF RADIATION WITH MATTER . . . . .	3-16
2.1. Introduction	3
2.2. Primary collisions	4
2.2.1. <i>Neutrons</i>	4
2.2.2. <i>Fast charged particles</i>	5
2.2.3. <i>Electrons</i>	10
2.3. Secondary collisions	11
2.3.1. <i>The interatomic potential</i>	11
2.3.2. <i>The hard-sphere approximation</i>	14
2.3.3. <i>Glancing collisions in the impulse approximation</i>	15
References	16
3. EXPERIMENTAL TECHNIQUES . . . . .	17-31
3.1. Introduction	17
3.2. Specimen preparation	18
3.3. Techniques for the study of primary events	19
3.3.1. <i>General features</i>	19
3.3.2. <i>Photographic and fluorescent screen techniques</i>	19
3.3.3. <i>Energy analysis of primary collisions</i>	21
3.3.4. <i>Range measurement</i>	21

- 3.4. Techniques for the study of secondary events 23
  - 3.4.1. *General* 23
  - 3.4.2. *Measurements on the spatial distribution of sputtered atoms* 23
  - 3.4.3. *Energy analysis of sputtered atoms* 27
- References 31
  
- 4. THE PASSAGE OF CHARGED PARTICLES THROUGH SOLIDS . . . . 32-168
  - 4.1. Introduction 32
  - 4.2. Fundamental theoretical considerations 33
    - 4.2.1. *Nuclear stopping* 33
    - 4.2.2. *Electronic stopping* 35
    - 4.2.3. *Charge exchange* 37
    - 4.2.4. *Range concepts* 38
  - 4.3. Measurements in polycrystalline solids 43
    - 4.3.1. *Stopping power* 43
    - 4.3.2. *Equilibrium charge* 46
    - 4.3.3. *Range measurement* 47
  - 4.4. The influence of the crystal lattice on nuclear stopping 51
    - 4.4.1. *Introduction* 51
    - 4.4.2. *Models of channelling in the nuclear stopping region* 56
    - 4.4.3. *Range measurements in single crystals* 67
      - 4.4.3.1. *Aluminium* 67
      - 4.4.3.2. *Tungsten* 71
      - 4.4.3.3. *Gold* 79
      - 4.4.3.4. *Silicon and ionic solids* 80
    - 4.4.4. *Factors influencing the penetration distribution of channelled particles* 83
      - 4.4.4.1. *Thermal vibration* 83
      - 4.4.4.2. *Slight misorientation* 90
      - 4.4.4.3. *Amorphous surface layers and radiation damage* 91
      - 4.4.4.4. *Electronic shell effects* 93
  - 4.5. Crystal lattice effects at high energy 95
    - 4.5.1. *Blocking and Rutherford scattering* 95
    - 4.5.2. *The transmission of protons through thin crystals* 115
    - 4.5.3. *The transmission of energetic heavy particles through crystals* 143
  - 4.6. Consequences of channelling and blocking effects 147
    - 4.6.1. *Nuclear reactions* 147
    - 4.6.2. *Reduction in sputtering yields, radiation damage and gas release* 152

4.6.2.1. <i>Sputtering</i>	152	4.6.2.2. <i>Radiation</i>	
4.6.2.3. <i>Gas release</i>	160		
4.7. <i>Channelling as a "tool" in the study of crystalline solids</i>	160		
4.7.1. <i>The orientation of crystals</i>	161		
4.7.2. <i>The study of epitaxial growth and surface layers</i>	162		
4.7.3. <i>The location of foreign atoms</i>	164		
References	165		
5. THE ATOMIC COLLISION CASCADE . . . . .	169–205		
5.1. Introduction	169		
5.2. Focusing of atomic collisions	170		
5.2.1. <i>Simple focusing in a row of hard-spheres</i>	170		
5.2.2. <i>Simple focusing in real crystals</i>	173		
5.2.3. <i>Assisted focusing in f.c.c. lattices</i>	175		
5.2.4. <i>Assisted focusing in b.c.c. lattices</i>	179		
5.3. The attenuation of simple focused collision sequences	182		
5.3.1. <i>Attenuation in a perfect static lattice</i>	183		
5.3.2. <i>Attenuation due to thermal vibration</i>	185		
5.3.3. <i>Attenuation due to lattice defects</i>	189		
5.4. The attenuation of assisted sequences	191		
5.5. Mass transport along collision sequences	193		
5.5.1. <i>Simple sequences</i>	193		
5.5.2. <i>Assisted sequences</i>	195		
5.6. Correlated collisions without focusing	195		
5.7. Computer simulation of focusing	196		
5.7.1. <i>The model</i>	196		
5.7.2. <i>Results for f.c.c. copper</i>	198		
5.7.3. <i>Results for b.c.c. iron</i>	200		
5.8. Collision spectra within a cascade	201		
References	205		
6. THE OBSERVATION OF SECONDARY COLLISIONS . . . . .	206–264		
6.1. Introduction	206		
6.2. Some complicated features of sputtering experiments	207		
6.2.1. <i>The fate of the bombarding ions</i>	207		
6.2.2. <i>Radiation damage effects</i>	214		
6.2.3. <i>State of the sputtered surface</i>	215		
6.3. Measurement of sputtering yield	219		
6.3.1. <i>Polycrystalline measurements</i>	219		
6.3.2. <i>Single crystal measurements</i>	225		

6.4. The spatial distribution of atoms sputtered from single crystals	228
6.4.1. <i>The observation of preferential ejection</i>	229
6.4.1.1. <i>f.c.c. structure</i>	229
6.4.1.2. <i>b.c.c. structure</i>	231
6.4.1.3. <i>other structures</i>	232
6.4.1.4. <i>effect of temperature</i>	232
6.4.2. <i>Models of preferential ejection</i>	234
6.4.3. <i>Discussion of experimental results</i>	246
6.4.4. <i>Channelled recoil trajectories</i>	250
6.5. Energy measurements of sputtered atoms	253
6.5.1. <i>Polycrystalline targets</i>	254
6.5.2. <i>Single crystal targets</i>	255
6.6. Transmission sputtering experiments	262
References	263
7. RELATED PHENOMENA . . . . .	265-277
7.1. Thermal spikes	265
7.2. Anisotropy of displacement energy	270
7.3. Fission tracks	272
References	277
8. AUTHOR INDEX . . . . .	278-280
9. SUBJECT INDEX . . . . .	281
