

# CONTENTS

## PART I. THEORY

### I. A SURVEY

1. Introduction	1
2. Experimental classification of breakdown	2
3. The electrical conductivity of dielectrics	5
4. The theoretical concept of dielectric breakdown	7
(a) Intrinsic breakdown	7
(b) Thermal breakdown	9
(c) Avalanche breakdown	12

### II. THEORIES OF INTRINSIC BREAKDOWN

5. Interaction between a conduction electron and lattice vibrations	14
6. Breakdown theories based on the single electron approximation	17
(a) The Fröhlich high energy criterion	20
(b) The von Hippel-Callen low energy criterion	24
(c) Non-polar crystals	26
7. The distribution function of the conduction electrons	27
(a) The low density approximation	29
(b) The high density approximation	33
8. Collective breakdown theories	36
(a) Pure crystalline dielectrics	36
(b) 'Amorphous' dielectrics	41

### III. THEORIES OF THERMAL BREAKDOWN

9. General principles of thermal breakdown	46
10. Steady-state thermal breakdown (one dimension)	47
(a) The maximum thermal voltage	48
(b) The general solution	50
11. Impulse thermal breakdown	54
12. Thermal breakdown for arbitrary times	57

### IV. THEORIES OF AVALANCHE BREAKDOWN

13. Avalanche breakdown in general	59
14. Field emission breakdown	60
15. Collision ionization avalanche breakdown	62
(a) The single electron theory	63
(b) Avalanche multiplication breakdown	67

## PART II. APPLICATIONS

## V. SPECIAL SUBSTANCES

16. The alkali halides	72
(a) The temperature dependence of the breakdown strength at low temperatures	76
(b) The breakdown strength at high temperatures	80
(c) Breakdown at intermediate temperatures	85
(d) The influence of mechanical deformation	86
(e) The influence of impurities	90
(f) Directional effects in breakdown	95
(g) The effect of thickness on breakdown strength	99
(h) Electrode effects and time-lags	104
(i) The alkali halides compared	110
17. Glass and quartz	113
18. Mica	119
19. Polymers	123

## VI. THE BREAKDOWN PROCESS

20. The relation of the critical fields to the breakdown process	127
(a) Intrinsic critical fields in general	127
(b) The Fröhlich high energy critical field	128
(c) The von Hippel-Callen low energy critical field	129
(d) The Fröhlich-Paranjape collective theory	129
(e) The Fröhlich 'amorphous' dielectric theory	131
(f) Field emission breakdown	132
(g) The single electron theory of avalanche breakdown	133
(h) The many-electron theory of avalanche breakdown	133
21. Conclusions	135
