
Contents

1. Theoretical Summary	1
1.1 Simple Concepts	1
1.2 The Sommerfeld Model	5
1.3 The Influence of a Periodic Potential	10
1.4 Motion of the Electrons	19
1.5 The Effect of Electric and Magnetic Fields	22
1.6 Relaxation Processes and Boltzmann's Equation	23
1.7 Matthiessen's Rule	27
1.8 Effect of Thermal Motion	29
2. Bulk Phenomena in Zero Magnetic Field	37
2.1 Room Temperature Electrical Conductivity	37
2.2 The Temperature Dependence of the Resistivity	38
2.3 Scattering by Imperfections	45
2.4 Thermal Conductivity	48
2.5 Thermoelectricity	52
3. Galvanomagnetic Effects	61
3.1 Hall Effect	61
3.2 Magnetoresistance	65
3.3 Thermal Resistance in a Magnetic Field	75
3.4 Oscillatory Effects	78
4. Size Effects	80
4.1 Zero Magnetic Field	80
4.2 Magnetic Effects in Thin Conductors	86
4.3 The Size Effect in Thermal Conductivity	89
4.4 The Anomalous Skin Effect	90
5. Miscellaneous Problems	94
5.1 Transition Metals	94
5.2 Resistance Minimum	96
5.3 Effect of Pressure	96
5.4 Melting and Crystallographic Transitions	100

Appendix: Tables	104
