

CONTENTS

Chapter 1. Statistical Thermodynamics of Point Defects in Crystals

A. D. Franklin

1. Introduction	1
1.1. Symbols Used	2
2. Statistical Thermodynamic Theory	4
2.1. Ideal Solution Theory	6
2.2. Pair Formation with Long-Range Forces	12
2.3. Surface and Dislocation Effects	16
2.4. Pressure Effects	19
3. Experimental Determination of Defect Thermodynamic Parameters	19
3.1. Noble Gas Solids	19
3.1.1. General References	19
3.1.2. Experimental Methods for the Noble Gas Solids	20
3.2. Metals	26
3.2.1. General References	26
3.2.2. "Best" Values for Vacancy Formation Parameters in Metals	27
3.2.3. Experimental Methods for Metals	28
3.2.4. Survey of Experimental Values for Vacancy Formation Parameters for Metals	40
3.3. Semiconductors	60
3.3.1. Germanium and Silicon	60
3.3.2. Graphite	64
3.4. Ionic Solids	68
3.4.1. General References	68
3.4.2. Experimental Methods for Ionic Crystals	69
3.4.3. Alkali Halides, Mainly Rocksalt Structure	72

3.4.4. Silver Halides, AgCl and AgBr	82
3.4.5. Alkaline Earth Halides	87
3.4.6. Oxides	92
References	94

Chapter 2. Ionic Conductivity (Including Self-Diffusion)

Robert G. Fuller

1. Introduction	103
2. Ionic Transport Equations	105
3. The Simple Theory	109
3.1. Concentrations of Point Defects	109
3.2. Jump Probability for Point Defects	116
4. Coulomb Interactions between Point Defects	118
4.1. Concentrations of Point Defects	118
4.2. Defect Mobility	123
5. Experimental Results	125
5.1. Fully Characterized Alkali Halide Crystals	133
5.1.1. Potassium Chloride	134
5.1.2. Potassium Bromide	134
5.1.3. Potassium Iodide	134
5.1.4. Rubidium Chloride	134
5.1.5. Sodium Chloride	136
5.2. Other Halide Crystals	143
5.2.1. Lithium Fluoride	143
5.2.2. Cesium Chloride	144
5.2.3. Ammonium Chloride	145
6. Comments on Future Experimental and Theoretical Work	146
Acknowledgments	148
References	149

Chapter 3. Defect Mobilities in Ionic Crystals Containing Aliovalent Ions

A. S. Nowick

1. Introduction	151
2. Interaction between Aliovalent Impurities and Other Point Defects	152
3. Diffusion of Aliovalent Impurities	154
3.1. Theory of Diffusion of M^{2+} in AX	155

3.2. Methods	158
3.3. Experimental Results	159
4. Dielectric and Anelastic Relaxation: Theory	161
4.1. Formal Theory	161
4.2. Concept of Relaxational Normal Modes	165
4.3. The Selection Rules	172
4.4. Relaxation Magnitudes	176
5. Dielectric and Anelastic Relaxation: Methods and Results	177
5.1. Electrical Methods	177
5.1.1. AC Dielectric Loss	177
5.1.2. Time-Dependent Polarization	179
5.1.3. Ionic Thermocurrent (ITC)	180
5.2. Internal Friction	182
5.3. Defect Aggregation Studies	183
5.4. Examples of Defect Relaxations.	184
5.4.1. $\text{CaF}_2\text{:NaF}$ and Analogs	184
5.4.2. $\text{CaF}_2\text{:MF}_3$	186
5.4.3. NaCl:MCl_2	189
5.4.4. Dipole aggregation in Alkali Halides	194
5.4.5. The $\text{Al}^{3+}\text{--Na}^+$ Defect in α -Quartz	194
6. Concluding Remarks	198
Acknowledgments	198
References	198

Chapter 4. Defect Creation by Radiation in Polar Crystals

E. Sonder and W. A. Sibley

1. Introduction	201
2. Radiation Defects	202
2.1. Electronic Defects	202
2.1.1. Valence Changes of Impurities in Crystals	202
2.1.2. Valence Changes of Lattice Defects and Self-Trapped Charges	203
2.2. Ionic Defects	204
2.2.1. Vacancies	204
2.2.2. Vacancy Aggregates	206
2.2.3. Interstitials	207
2.2.4. Interstitial Aggregates	208
2.3. Dislocations and Voids	208
2.4. Nomenclature	208

3. Radiation Damage Processes	211
3.1. Electronic Processes	212
3.2. Elastic Collisions	217
3.3. Radiolysis Processes	220
4. Defect Creation in Halide Crystals	221
4.1. Elastic Collisions	221
4.2. Electronic Processes	221
4.3. Radiolysis	223
4.3.1. Primary Defect Production Processes	225
4.3.2. Defect Mobilities	231
4.3.3. Secondary Processes	242
4.3.4. Summary	260
5. Defect Creation in Oxide Crystals	260
5.1. Electronic Processes	261
5.2. Elastic Collision Processes	268
5.2.1. Alkaline Earth Oxides	268
5.2.2. BeO and ZnO	279
5.2.3. Al_2O_3	281
5.3. Future Research Areas	282
5.3.1. Identification of Defects	282
5.3.2. Defect Production and Annealing	282
5.3.3. Electronic Processes	282
References	283

Chapter 5. Properties of Electron Centers

Clifford C. Klick

1. Single-Vacancy Centers	291
1.1. F Centers	291
1.1.1. Absorption Spectra of the F Center	291
1.1.2. Raman Scattering of the F Center	297
1.1.3. Electron Spin Resonance of F Centers	297
1.1.4. Luminescence of the F Center	301
1.1.5. Higher Excited States of the F Center	306
1.1.6. F_A Centers	309
1.1.7. Z Centers	312
1.2. F^- Centers	313
1.3. F^+ Centers	315
2. Complex Centers	317
2.1. F_2 Centers	317

2.2. F_3 Centers	320
2.3. Larger Aggregates	321
2.4. Zero-Phonon Lines	321
2.5. Interstitial Centers	322
3. Other Materials	322
References	323

Chapter 6. Hole Centers in Halide Lattices

M. N. Kabler

1. Introduction	327
2. The Self-Trapped Hole	329
2.1. EPR Spectra	329
2.2. An Atomic Model of Electronic Structure	334
2.3. Hyperfine Structure	337
2.4. Electron Zeeman Interaction	338
2.5. Optical Absorption	339
2.6. Thermally Induced Reorientation	346
2.7. A Theory for the $[X_2^-]$ Center	348
2.8. Electron-Hole Recombination	355
3. $[X_2^-]$ Centers Associated with Noninterstitial Defects.	360
3.1. The V Center	360
3.2. The $[X_2^-]_A$ Center	361
3.3. Mixed Halogen Centers $[XY^-]$	361
4. Interstitial-Associated Hole Centers	363
4.1. The H Center	364
4.2. H -Center Theory	367
4.3. Impurity-Associated Interstitials	369
4.4. Interstitial Halogen-Alkali-Vacancy Centers	374
4.5. Heteronuclear Molecular Ions Involving Interstitials	374
5. Halide Molecular Ions in Other Materials	376
Acknowledgments	377
References	378

Chapter 7. Color Centers in Simple Oxides

A. E. Hughes and B. Henderson

1. Introduction	381
2. Magnetic Properties of F^+ Centers	386

2.1. Principles of Magnetic Resonance Methods Applied to F -Center Problems	386
2.2. EPR Spectra of F^+ Centers	389
2.3. Comparison with F Centers in the Alkali Halides	397
2.4. F^+ Centers in Other Oxides	397
3. Optical Properties of F^+ Centers	399
3.1. F^+ Centers in Absorption	400
3.2. Theoretical Position	402
3.3. Magneto-optical Experiments	404
3.4. Band Shapes and Vibronic Properties	409
3.5. F^+ Centers in Emission	423
4. F Centers	426
4.1. Evidence for F Centers in Alkaline Earth Oxides	426
4.2. Electronic Structure of the F Center	430
4.3. Annealing of F -Type Centers	434
4.4. F -Type Centers in Other Oxides	435
5. Perturbed F^+ Centers and Vacancy Pairs	436
5.1. EPR Studies	436
5.2. Optical Studies of Vacancy Pair Centers	438
6. Trapped-Hole Centers	443
6.1. Properties of Trapped-Hole Centers in the Alkaline Earth Oxides	443
6.2. The Electronic Structure of the V^- Center	446
6.3. The Stability of the Trapped Hole	449
6.4. Impurity Effects	452
7. Aggregate Centers	456
7.1. Zero-Phonon Lines in MgO	456
7.2. Uniaxial Stress Experiments	460
7.2.1. Orthorhombic Centers	460
7.2.2. Trigonal Centers	463
7.2.3. Monoclinic I Centers	470
7.3. Other Studies	471
8. Exchange-Coupled Defects	472
8.1. Spin Hamiltonian for an Exchange-Coupled Pair	472
8.2. Pair Spectra with $S_1 = S_2 = \frac{1}{2}$	475
8.3. Impurity Pair Spectra with $S_1 = S_2 > \frac{1}{2}$	481
Acknowledgments	483
References	484

Chapter 8. Conduction by Polarons in Ionic Crystals

Frederick C. Brown

1. Introduction—History and Development of Polaron Concepts .	491
2. Essential Features of the Polaron	495
3. Survey of Continuum Properties and Coupling Constants for Ionic Crystals	504
4. Transport Measurements—Experimental Techniques	505
5. Mobility Determined by Optical Mode Scattering—Comparison of Experiment with Theory	517
6. High Fields and Low Temperature	527
Acknowledgments	545
References	546
Index	551
