

CONTENTS

I. Introduction	1
A. Introductory Remarks,	1
B. History,	3
1. Early History,	3
2. Discovery and Development,	3
3. The Woodstock of Physics,	4
C. Literature,	5
1. Development of the Literature,	5
2. Updating the Literature,	6
3. General Articles,	6
D. Pace of Change,	6
E. Applications,	8
F. Nomenclature,	10
 II. Transition Metal, Oxide, and Heavy Fermion Systems	 11
A. Introduction,	11
B. Elements,	11
C. Alloys and Compounds,	13
D. Ternary Compounds Containing Group VI Atoms,	18
E. Oxides,	18
F. Valence Electrons and Density of States,	19
G. Commonalities of Old and New Superconducting Compounds,	20
H. Heavy Fermion Systems,	20

III. Background and Overview	22
A. Introduction, 22	
B. Oxide Type Superconductors, 22	
C. Transition Temperature, 23	
1. Resistivity Curve Definition, 23	
2. Derivative Curve Definition, 24	
D. Resistivity and Susceptibility Criteria, 25	
E. Effect of Granularity, 26	
F. Very High Transition Temperatures, 29	
G. Characteristic Length Parameters, 29	
1. Unit Cell Dimensions, 30	
2. Conduction Electron Separation, 30	
3. Coherence Length, 30	
4. Penetration Depth, 32	
5. Ginzburg-Landau Parameter, 33	
6. Grain Size, 33	
7. Length Parameters and Critical Fields, 34	
H. Dimensionality, 35	
I. Fluctuations and Noise, 36	
J. Valence, 36	
K. Concluding Remarks, 42	
IV. Theory	43
A. Introduction, 43	
B. Bardeen-Cooper-Schrieffer Theory, 43	
1. Description of BCS Theory, 44	
2. Predictions of BCS Theory, 46	
3. Applicability of BCS Theory, 47	
C. Coupling Mechanisms, 47	
1. Phonons, 47	
2. Excitons, 48	
3. Plasmons, 49	
4. Polarons and Bipolarons, 50	
5. Other Mechanisms, 50	
D. Resonant Valence Bonds, 51	
E. Antiferromagnetic Models, 53	
F. Other Models, 54	
G. Band Structure, 56	
H. Concluding Remarks, 57	
V. Preparation and Characterization of Samples	59
A. Introduction, 59	
B. Methods of Preparation, 61	
C. Additional Comments on Preparation, 63	

- D. Films, 64
- E. Single Crystals, 66
- F. Aligned Grains, 67
- G. Reactivity, 68
- H. Thermogravimetric Analysis, 69
- I. Checks on Quality, 69
- J. Resistivity Measurement, 71

VI. Crystallographic Structures 72

- A. Introduction, 72
- B. Perovskites, 73
 - 1. Cubic Form, 73
 - 2. Tetragonal Form, 74
 - 3. Orthorhombic Form, 74
 - 4. Atom Arrangements, 75
- C. Barium-Lead-Bismuth Oxide, 76
- D. Perovskite-Type Superconducting Structures, 78
 - 1. Atom Sizes, 78
 - 2. Unit Cell Stacking, 81
- E. Lanthanum-Copper Oxide, 81
 - 1. Tetragonal Form, 81
 - 2. Alternate Tetragonal Form, 82
 - 3. Orthorhombic Form, 83
 - 4. Phase Transition, 85
 - 5. Generation of LaSrCuO Structures, 86
 - 6. Layering Scheme of LaSrCuO, 86
- F. Yttrium-Barium-Copper Oxide, 87
 - 1. Tetragonal Form, 89
 - 2. Orthorhombic Form, 92
 - 3. Temperature Factors, 95
 - 4. Phase Transition, 95
 - 5. Oxygen-Site Nomenclature, 97
 - 6. Generation of YBaCuO Structure, 97
 - 7. Layering Scheme of YBaCuO, 99
 - 8. YBaCuO Defect Structures, 101
- G. Other LaSrCuO and YBaCuO Structures, 102
- H. Bismuth-Strontium-Calcium-Copper Oxide, 102
- I. Thallium-Barium-Calcium-Copper Oxide, 105
- J. Site Symmetries, 107
- K. Structural Origin of Superconductivity, 108

VII. Other Structural Properties 109

- A. Introduction, 109
- B. Oxygen Deficiency, 109

1. Oxygen Loss, 110
2. Ordered Oxygen Vacancies in YBaCuO, 113
3. Copper Charge States, 114
- C. Defects, 114
 1. Microscopy Studies, 114
 2. Defect Types, 115
 3. Twinning, 115
 4. Atomic Scale Defects, 116
 5. Radiation Damage, 116
- D. Anisotropy, 116
 1. LaSrCuO, 116
 2. YBaCuO, 118
- E. Instability, 119
 1. LaSrCuO, 120
 2. YBaCuO, 121
 3. Ferroelectricity, 122
- F. Substitutions, 122
 1. Rare Earths in LaSrCuO, 122
 2. Rare Earths in YBaCuO, 122
 3. Alkaline Earths, 124
 4. Paramagnetic Substitutions for Copper, 124
 5. Nonmagnetic Substitutions for Copper, 128
 6. Substitutions for Oxygen, 129
 7. Other Substitutions, 129
 8. Influence of Substitutions on Superconductivity, 129
- G. Isotope Effect, 130
- H. Effect of Pressure, 131
 1. LaSrCuO, 132
 2. YBaCuO, 132
 3. BiSrCaCuO, 132
- I. Elastic and Mechanical Properties, 134
 1. Lattice Size and Mass Density, 135
 2. Thermal Expansion, 136
 3. Elastic Moduli, 136
 4. Ultrasonics, 138

VIII. Magnetic Properties

139

- A. Introduction, 139
- B. Susceptibility and Magnetization, 139
 1. Measurement Techniques, 141
 2. Type II Superconductivity, 141
 3. Field Cooling and Zero-Field Cooling, 143
 4. Diamagnetic Shielding and Meissner Effect, 143
 5. Real and Imaginary Susceptibilities, 144
 6. Magnetization, 146

7. Magnetization Hysteresis, 147
8. Flux Quantization, 148
9. Comparison with Other Measurements, 149
C. Critical Fields, 150
D. Temperature-Dependent Magnetism, 154
1. Temperature Dependence, 154
2. Diamagnetism, 155
3. Paramagnetism, 155
4. Antiferromagnetism, 158
5. Glassy State, 160
E. Magnetic Resonance, 163
1. Electron Spin Resonance, 163
2. Nonresonant Microwave Absorption, 165
3. Nuclear Magnetic Resonance, 167
4. Quadrupole Resonance, 168
5. Muon Spin Relaxation, 169
6. Mössbauer Resonance, 169
F. Magnetism and Superconductivity, 170

IX. Phonon and Spectroscopic Properties	171
--	------------

A. Introduction, 171
B. Energy Gap, 171
1. Measurement, 171
2. Gap Values and E_g/kT_c Ratios, 172
3. Infrared versus Tunneling Measurements, 178
C. Density of States, 178
D. Breathing Modes and Electron-Phonon Interaction, 179
E. Spectroscopic Measurements, 180
1. Infrared and Raman, 180
2. Photoemission, 185
3. X-Ray Absorption, 188
4. Inelastic Neutron Scattering, 188
5. Positron Annihilation, 189
F. Specific Heat, 190
1. Specific Heat above T_c , 190
2. Discontinuity at T_c , 194
3. Measurements below T_c , 195

X. Transport Properties	196
--------------------------------	------------

A. Introduction, 196
B. Current Flow, 196
1. Resistivity, 197
2. Critical Current Density, 199
3. Persistent Currents, 204

C. Miscellaneous Transport Properties,	204
1. Magnetoresistance,	204
2. Hall Effect,	205
3. Thermoelectric Effects,	209
4. Photoconductivity,	211
5. Thermal Conductivity,	211
D. Tunneling Properties,	212
1. Tunneling Measurements,	212
2. Josephson Effect,	215
3. Macroscopic Quantum Phenomena,	216
XI. Concluding Remarks	218
A. Introduction,	218
B. Growth of the Literature,	218
C. The Present Situation,	219
D. Comparison with Previous Superconductors,	220
E. Mechanisms and Models,	220
F. Very High T_c ,	221
G. Open Questions,	222
H. Conclusion,	222
Appendix	223
References	224
Index	277
