

## CONTENTS

<i>Preface</i>	<i>vii</i>
<b>1. Introduction</b>	<b>1</b>
1-1. Basic Hypotheses	1
1-2. The Molecular Hypothesis and the Kinetic Hypothesis of Heat	2
1-3. Atoms and the Quantum Theory	6
1-4. Statistical Hypotheses	8
<b>2. Distribution Functions and the Perfect-gas Law</b>	<b>12</b>
2-1. Distribution Functions and Average Values	12
2-2. Derivation of the Perfect-gas Law	14
2-3. Derivation of the Perfect-gas Law (Cont.)	17
2-4. Molecular Speeds and the Specific Heat of a Monatomic Gas	20
2-5. Collisions with the Wall and Effusion Problems	21
Appendix 2-1. Spherical Coordinates and Solid Angles	24
<b>3. Mean-free-path Methods and Transport Phenomena</b>	<b>27</b>
3-1. Distribution of Free Paths and the Mean Free Path	27
3-2. Calculation of the Collision Frequency	30
3-3. Collisions with the Wall and Self-diffusion	33
3-4. Viscosity and Heat Conduction	36
3-5. Unified Treatment of the Transport Phenomena	39
3-6. Applications of the Transport Formulas Problems	42
Appendix 3-1. The Poiseuille Flow Formula	45
<b>4. Diffusion</b>	<b>48</b>
4-1. Mutual Diffusion	48
4-2. Elementary Treatment of Mutual Diffusion by the Momentum-transfer Method	52
4-3. Free-molecule Diffusion and the Flow in Tubes at Low Pressures	55
4-4. The General-diffusion Equation and the Random-walk Problem Problems	63
Appendix 4-1. Stirling's Formula	69
<b>5. The Maxwell-Boltzmann Distribution Law</b>	<b>72</b>
5-1. The Maxwell-Boltzmann Law and the Velocity Distribution Function	72
5-2. The Maxwell Distribution Function (Cont.). Application to the Col- lision Frequency	76
5-3. Internal Degrees of Freedom of a Diatomic Molecule	80
5-4. The Equipartition Theorem and Specific Heats Problems	84
Appendix 5-1. Barometric Derivation of Maxwell's Law	86
Appendix 5-2. Statistical-mechanical Derivation of the Maxwell-Boltz- mann Law	87
	90

<b>6. Imperfect Gases and Intermolecular Forces</b>	<b>96</b>
6-1. The Virial Coefficients and the van der Waals Equation	96
6-2. Theory of the Second Virial Coefficient	101
6-3. Intermolecular Forces and Viscosity	108
Problems	115
<b>7. Thermal Diffusion</b>	<b>117</b>
7-1. Elementary Theory of Thermal Diffusion	117
7-2. Thermal Diffusion and Isotope Separation	121
Problems	126
<b>8. Collision Dynamics, Cross Sections, Mutual Diffusion, and Chemical Kinetics</b>	<b>128</b>
8-1. Collision Dynamics	128
8-2. Cross Sections and Collision Rates	136
8-3. Advanced Treatment of Mutual Diffusion	145
8-4. Applications to Chemical Kinetics	151
Problems	155
<b>9. Brownian Motion and Density Fluctuations</b>	<b>157</b>
9-1. The Brownian Motion	157
9-2. Density Fluctuations and the Scattering of Light	163
Problems	173
Appendix 9-1. Statistical Fluctuations	173
<b>10. Fundamental Experiments and Experimental Procedures</b>	<b>178</b>
10-1. Molecular Beams and the Verification of the Maxwell Distribution Law	178
10-2. Measurement of the Coefficient of Viscosity	185
10-3. The Measurement of Thermal Conductivity and the Accommodation Coefficient	188
10-4. Measurement of the Coefficients of Mutual and Self-diffusion	193
Problems	201
<b>11. Introduction to Advanced Transport Theory</b>	<b>203</b>
11-1. Maxwell's Equation of Change and the Hydrodynamical Equations	204
11-2. The Maxwell-Chapman Transport Theory; Calculation of the Viscosity Coefficient	213
11-3. The Boltzmann Integrodifferential Equation	224
11-4. The <i>H</i> Theorem and the Maxwell-Boltzmann Distribution Law	232
Problems	242
<b>12. Intermolecular Forces</b>	<b>244</b>
12-1. Theoretical Classification of Intermolecular Forces	244
12-2. Semiempirical Determination of Intermolecular Forces	247
<b>General Appendix</b>	<b>259</b>
Tables of Transport Coefficients for a Few Simple Gases	260
A. Viscosity Coefficients	260
B. Thermal Conductivities	262
C. Self-diffusion Coefficients	263
D. Mutual-diffusion Coefficients	264
E. Thermal-diffusion Factors	265
Table of Fundamental Constants	266
Some Integral Formulas	266
<i>Bibliography</i>	269
<i>Index</i>	273
