

## C O N T E N T S

### I C. J. GORTER, THE TWO FLUID MODEL FOR SUPERCONDUCTORS AND HELIUM II

1. Introductory Remarks, 1. – 2. Some Properties of Superconductors, 1. – 3. Some Properties of Liquid Helium II, 3. – 4. Behaviour near Zero Temperature, 5. – 5. The Services rendered by the Two Fluid Model, 5. – 6. The Free Energies as a Function of the Internal Parameter, 9. – 7. The Formulae of H. London and Tisza for Helium II, 11. – 8. Theoretical Background in the Case of Helium II, 11. – 9. Theoretical Background in the Case of Superconductivity, 12. – 10. Final Remarks, 13.

### II R. P. FEYNMAN, APPLICATION OF QUANTUM MECHANICS TO LIQUID HELIUM.

1. Introduction, 17. – 2. Summary of the Theoretical Viewpoint, 18. – 3. Landau's Interpretation of the Two Fluid Model, 20. – 4. The Reason for the Scarcity of Low Energy States, 25. – 5. Rotons, 31. – 6. Irrotational Superfluid Flow, 34. – 7. Rotation of the Superfluid, 36. – 8. Properties of Vortex Lines, 40. – 9. Critical Velocity and Flow Resistance, 45. – 10. Turbulence, 48. 11. Rotons as Ring Vortices, 51.

### III J. R. PELLAM, RAYLEIGH DISKS IN LIQUID HELIUM II

1. Introduction, 54. – 2. Operation of the Classical Rayleigh Disk, 55. – 3. The Thermal Rayleigh Disk, 57. – 4. Arrangement, 58. – 5. Performance, 60. – 6. Remarks, 62.

### IV A. C. HOLLIS HALLETT, OSCILLATING DISKS AND ROTATING CYLINDERS IN LIQUID HELIUM II

1. Introduction, 64. – 2. Viscous Behaviour of Liquid Helium II, 65. – 3. Theory of the Viscosity of Liquid Helium II, 68. – 4. Non-viscous Behaviour of Liquid Helium II, 71.

### V E. F. HAMMEL, THE LOW TEMPERATURE PROPERTIES OF HELIUM THREE

1. Introduction, 78. – 2. Theory of Liquid  ${}^3\text{He}$ , 79. –

3. The State Properties of  $^3\text{He}$ , 82. – 4. Thermal Properties, 84. – 5. Magnetic Properties of Liquid  $^3\text{He}$ , 98. – 6. Transport Properties, 101. – 7. Miscellaneous Low Temperature Properties of  $^3\text{He}$ , 103. – 8. Conclusion, 105.

VI J. J. M. BEENAKKER and K. W. TACONIS, LIQUID MIXTURES OF HELIUM THREE AND FOUR

1. Introduction, 108. – 2. The Equilibrium between Liquid and Vapour, 110. – 3. Theoretical Description of the Behaviour of Mixtures of  $^3\text{He}$  and He II, 114. – 4. The Specific Heat, 118. – 5. The Influence of  $^3\text{He}$  on the Lambda Point, 119. – 6. The Heat of Mixing in  $^3\text{He}$ — $^4\text{He}$  Mixtures, 122. – 7. The influence of  $^3\text{He}$  on the Velocity of Second Sound, 125. – 8. The Influence of  $^3\text{He}$  on the Fountain Effect, 127. – 9. The influence of  $^3\text{He}$  on the Heat Transport in He II, 131. – 10. The Influence of  $^3\text{He}$  on Helium Transfer through Superleaks, 134.

VII B. SERIN, THE MAGNETIC THRESHOLD CURVE OF SUPERCONDUCTORS

1. Introduction, 138. – 2. Thermodynamic Discussion, 139. – 3. The Isotope Effect, 143. – 4. Comparisons with the Two-Fluid Model, 145. – 5. The Specific Heat of Superconductive Tin, 146. – 6. The Effect of Impurities, 148.

VIII C. F. SQUIRE, THE EFFECT OF PRESSURE AND OF STRESS ON SUPERCONDUCTIVITY

1. Introduction, 151. – 2. Experimental, 151. – 3. Discussion of Theory and Experiment, 156.

IX T. E. FABER and A. B. PIPPARD, KINETICS OF THE PHASE TRANSITION IN SUPERCONDUCTORS

1. Introduction, 159. – 2. A. Model of the Superconducting State, 161. – 3. Nucleation, 166. – 4. Propagation, 172. – 5. Elimination of Trapped Flux, 177.

X K. MENDELSSOHN, HEAT CONDUCTION IN SUPERCONDUCTORS

1. Introduction, 184. – 2. Experimental Technique, 185. – 3. Theory, 185. – 4. Results at Helium Temperatures, 190. – 5. Results below 1°K, 194. – Heat Conduction in the Intermediate State, 199. – 7. The Thermal Switch, 200.

## XI J. G. DAUNT, THE ELECTRONIC SPECIFIC HEAT IN METALS

1. Introduction, 202. – 2. Method of Evaluation of the Electronic Specific Heat from Calorimetric Measurements, 203. – 3. Method of Evaluation of the “normal” Electronic Specific Heat from Magnetic Observations on Superconductors, 206. – 4. The Observed Values of the Electronic Specific Heat in Pure Metals, 208. – 5. Discussion of the Effective Mass Values, 212. – 6. An Apparent Correlation among “soft” Superconductors, 214. – 7. The Density of States in the d-band in the Transition Metals, 215. – 8. Possible Influence of Inter-electronic Interaction, 219.

## XII A. H. COOKE, PARAMAGNETIC CRYSTALS IN USE FOR LOW TEMPERATURE RESEARCH

1. Introduction, 224. – 2. Energy Levels of a Magnetic Ion, 226. – 3. Interaction Splitting the Ground State, 227. – 3a. Stark Effect, 227. – 3b. Nuclear Effects, 229. – 3c. Magnetic and Exchange Interaction, 230. – 4. Methods of Experiment, 233. – 4a. Susceptibility Measurements, 233. – 4b. Specific Heat Measurements, 234. – 4c. Paramagnetic Resonance, 235. – 5. Some Experimental Results, 237.

## XIII N. J. POULIS and C. J. GORTER, ANTIFERROMAGNETIC CRYSTALS

1. Introduction, 245. – 2. Molecular Field Theory for Anisotropic Crystals, 248. – 3. The Magnetization as a Function of the Field, 252. – 4. Data on the Proton Magnetic Resonance, 257. – 5. Specific Heat, 263. – 6. Antiferromagnetic Resonance, 265. – 7. A few other Data, 268. – 8. Final Remarks, 269.

## XIV D. DE KLERK and M. J. STEENLAND, ADIABATIC DEMAGNETIZATION

1. Introduction, 273. – 2. Description of Experimental Methods, 278. – 3. Absolute Temperature Determination, 287. – 4. Magnetic Behaviour at the Lowest Temperatures, 301. – 5. Non-magnetic Investigations, 309. – 6. Nuclear Orientation, 321.

XV L. NÉEL, THEORETICAL REMARKS ON FERROMAGNETISM AT  
LOW TEMPERATURES

1. Introduction, 336. – 2. Finely Dispersed Substances, 337. – 3. Substances with Bloch Walls, 340. – 4. Thermal Activation, 341.

XVI L. WEIL, EXPERIMENTAL RESEARCH ON FERROMAGNETISM AT  
VERY LOW TEMPERATURES

1. The Methods of Measurement, 345. – 2. Results Obtained with Fine Powders, 347. – 3. Results Obtained with Films, 350. – 4. The Alloys, 350. – 5. Magnetic Relaxation at very low Temperatures, 352.

XVII A. VAN ITTERBEEK, VELOCITY AND ABSORPTION OF SOUND  
IN CONDENSED GASES

1. Introduction, 355. – 2. Experimental Techniques, 356. – 3. Determination of the Thermodynamic Quantities, 361. – 4. Attenuation in Gases and Condensed Gases, 367. – 5. Measurements in Liquid Helium, 370.

XVIII J. DE BOER, TRANSPORT PHENOMENA IN GASES AT LOW  
TEMPERATURES

1. Introduction, 381. – 2. The Boltzmann Equation. Definition of the Crosssections, 384. – 3. General Expressions for the Transport Coefficients, 387. – 4. Intermolecular Interaction and the Crosssections for Helium, 391. – 5. Viscosity and Heat Conductivity of Helium, 397. – 6. Diffusion and Thermal Diffusion of Helium, 402.
