Chapter	Page
I W. F. VINEN, VORTEX LINES IN LIQUID HELIUM II	1
1. Introduction, 1. – 2. Theoretical background, 2. – 3. Vortex lines in uniformly rotating helium, 10. – 3.1. Theoretical equilibrium state, 10. – 3.2. Mutual friction in the uniformly rotating liquid, 12. – 3.3. Vortex waves in the uniformly rotating liquid, 18. – 4. The detection of single quanta of circulation, 25. – 5. The energy of a free vortex line, 31. – 6. The hydrodynamic stability of ideal superfluid flow, 36. – 7. Superfluid turbulence, 43. – 8. The validity of the concept of a simple vortex line, 54.	
II G. CARERI, HELIUM IONS IN LIQUID HELIUM II	58
1. Introduction, 58. – 2. Ionic structures in liquid helium, 59. – 2.1. Possible structures, 59. – 2.2. Experimental behaviour of ionic structures, 60. – 2.3. The adopted structures, 61. – 3. The ionic motion in liquid helium II, 62. – 3.1. The theoretical viewpoint, 62. – 3.2. Experiments in non-turbulent flow, 63. – 3.3. Experiments in turbulent flow, 66. – 4. The ionic mobilities, 69. – 4.1. Experimental results, 69. – 4.2. General discussion, 72. – 5. Ionization and recombination processes, 75. – 6. Concluding remarks, 78.	
III M. J. BUCKINGHAM and W. M. FAIRBANK, THE NATURE OF THE λ -TRANSITION IN LIQUID HELIUM	80
1. Introduction, 80. – 2. The specific heat near the λ -point, 82. – 2.1. Description of the experiment, 82. – 2.2. Method of measurement, 84. – 2.3. Results, 84. – 2.4. Relation to data far from the transition, 87. – 3. Thermodynamics of λ -transitions, 89. – 3.1. λ -transitions, 89. – 3.2. Properties at the transitions, 89. – 3.3. Properties near the transition, 90. – 3.4. Properties of the new variables, 92. – 3.5. Connection with other thermodynamic relations, 93. – 4. Analysis of other measurements, 94. – 4.1. Properties of the λ -line, 94. – 4.2. Thermal expansion coefficient, 95. – 4.3. Velocity of sound, 99. – 4.4. Other measured quantities, 100. – 5. The nature of the transition, 102. – 6. Separation of the singularity, 104. – 7. Analysis of the specific heat of liquid helium, 107. – 8. The superconducting transition, 109.	
IV E. R. GRILLY and E. F. HAMMEL, LIQUID AND SOLID ^3He . .	113
1. Theories of liquid ^3He , 113. – 1.1. Landau's theory of liquid ^3He , 113. – 1.2. The Brueckner and Gammel theory of liquid ^3He ,	

115. – 1.3. Goldstein's theory of liquid ^3He , 116. – 1.4 Pair correlation theories of liquid ^3He , 116. – 2. Theories of solid ^3He , 118. – 2.1. Qualitative, 118. – 2.2. Theory of Bernardes and Primakoff 118. – 3. Pressure-volume-temperature relations, 119. – 3.1. At vapor pressures, 119. – 3.2. At intermediate pressures, 122. – 3.3. At melting pressures, 123. – 4. Thermal properties, 129. – 4.1. Specific heat, 129. – 4.2. Entropy, 132. – 5. Transport properties of liquid and solid ^3He , 134. – 5.1. Thermal conductivity and viscosity of liquid ^3He , 134. – 5.2. Heat transport in solid ^3He , 136. – 5.3. Self-diffusion coefficient for liquid ^3He , 136. – 5.4. Self-diffusion coefficient for solid ^3He , 138. – 6. Nuclear spin relaxation in condensed ^3He , 138. – 6.1. Liquid ^3He , 138. – 6.2. Solid ^3He , 142. – 7. Velocity of sound in ^3He , 143. – 7.1. Experimental results, 143. – 7.2. Attenuation, 145. – 7.3. Zero sound, 146. – 7.4. Sound propagation in liquid ^3He below the "phase transition", 147. – 8. Summary, 147.	
V K. W. TACONIS, ^3He CRYOSTATS	153
1. Introduction, 153. – 2. First cryostat by Roberts and Sydoriak, 155. – 3. Calorimeter by Seidel and Keesom, 156. – 4. Calorimeter by Taconis and De Bruyn Ouboter, 158. – 5. Refrigerator with glass Dewar by Zinov'eva and Peshkov, 160. – 6. Refrigerator by Reich and Garwin, 163. – 7. Metal Refrigerator by Peshkov, Zinov'eva and Filimonov, 164. – 8. Large metal cryostat by Laquer, Sydoriak and Roberts, 165. – 9. Cryostat construction by Taconis and Le Pair, 166.	
VI J. BARDEEN and J. R. SCHRIEFFER, RECENT DEVELOPMENTS IN SUPERCONDUCTIVITY	170
1. Introduction, 170. – 2. Historical Survey, 175. – 3. Outline of the London and Pippard Theories, 178. – 4. London's quantum picture of the superconducting state, 181. – 5. Elementary excitations in normal metals, 184. – 5.1. Quasi-particle excitations, 184. – 5.2. Screening and backflow, 186. – 5.3. Interactions between elementary excitations, 189. – 6. Electron-phonon interactions, 191. – 7. Elementary excitations in superconductors, 193. – 8. Nature of the wave functions for superconductors, 195. – 8.1. Reasons for pair configurations, 195. – 8.2. Ground state wave function, 198. – 8.3. Excitation spectrum, 200. – 8.4. Relation to Einstein-Bose condensation, 200. – 9. Results for simplified model, 201. – 9.1. Integral equation, 201. – 9.2. Coulomb interactions and life-time effects, 203. – 9.3. Excitation spectrum, 204. – 10. Thermodynamic properties, 207. – 11. Transition probabilities and coherence effects, 212. – 11.1. Theory, 212. – 11.2. Acoustic attenuation, 218. – 11.3. Nuclear spin relaxation, 222. – 12. Electromagnetic properties, 224. – 12.1. Theory, 224. – 12.2. Infrared transmission through thin films, 236. – 12.3. Penetration depths, 240. – 12.4. Surface impedance, 246. – 13. Collective excitations, 252. – 14. Two-fluid model and persistent currents, 263. – 14.1. Two-fluid model, 263. – 14.2. Critical currents in thin films, 267. – 14.3. Ginzburg-Landau theory of boundary energies, 268. – 15.	

Thermal conductivity, 270. – 15.1. Lattice component, 270. – 15.2. Electronic component, 272. – 16. Superconducting alloys and compounds, 275. – 17. Conclusions, 280.	
VII M. YA. AZBEL' and I. M. LIFSHITZ, ELECTRON RESONANCES IN METALS	288
Introduction, 288. – 1. Cyclotron resonance, 289. – 1.1. Physical picture of cyclotron resonance, 289. – 1.2. Theory of cyclotron resonance, 294. – 1.3. Analysis of the surface impedance, 302. – 1.4. Further development of the theory of cyclotron resonance, 308. – 2. A special type of damping (non-skin) in a metal, 312. – 2.1. Physical basis for non-skin damping, 312. – 2.2. New resonance effects related to field "splashes", 317. – 3. Paramagnetic resonance, 319. – 3.1. Physical picture of paramagnetic resonance, 319. – 3.2. Theory and experimental observation of paramagnetic resonance, 321.	
VIII W. J. HUISKAMP and H. A. TOLHOEK, ORIENTATION OF ATOMIC NUCLEI AT LOW TEMPERATURES II	333
Introduction, 333. – 1. Theoretical results on nuclear effects with oriented nuclei; general theory: alpha and gamma radiation, 333. – 2. Theoretical results concerning beta radiation emitted from oriented nuclei, 335. – 3. Experimental results on alpha particle emission, 346. – 4. Beta asymmetry experiments, 352. – 5. Experimental results on gamma radiation, 365. – 6. Methods of nuclear orientation, 373. – 7. Nuclear orientation in ferromagnetic and antiferromagnetic substances, 374. – 8. Dynamic methods of nuclear orientation, 380. – 9. Concluding remarks, 390.	
IX N. BLOEMBERGEN, SOLID STATE MASERS	396
1. Introduction, 396. – 2. Paramagnetic resonance in maser materials, 400. – 3. Paramagnetic relaxation, 405. – 4. Maser circuits, 414. – 5. Noise, 420. – 6. Millimeter and infrared solid state masers, 424.	
X J. J. M. BEENAKKER, THE EQUATION OF STATE AND THE TRANSPORT PROPERTIES OF THE HYDROGENIC MOLECULES	430
1. Introduction, 430. – 2. The second virial coefficient, 431. – 2.1. Introduction, 431. – 2.2. Absolute determinations of <i>PV</i> isotherms 432. – 2.3. Relative determinations, 433. – 2.4. Direct excess determinations, 435. – 3. Thermal conductivity, 436. – 3.1. Experimental data, 436. – 4. Viscosity, 437. – 4.1. Experiments in the liquid hydrogen temperature range, 437. – 4.2. Experiments between 20 and 80°K, 438. – 4.3. Experiments on binary mixtures, 439. – 5. The diffusion coefficient, 439. – 6. Thermal diffusion, 440. – 6.1. Introduction, 440. – 6.2. Experimental results, 441. – 7. The influence of the total nuclear spin on the properties of H ₂ and D ₂ , 442. – 7.1. Introduction, 442. – 7.2. The difference in the second virial coefficient, 443. – 7.3. The difference in the	

viscosity, 444. – 8. Theoretical calculations, 445. – 8.1. Introduction, 445. – 8.2. Comparison with experimental data, 448. – 8.3. General conclusions, 452.	
XI Z. DOKOUPIL, SOME SOLID-GAS EQUILIBRIA AT LOW TEMPERATURES 454	
1. Introduction, 454. – 2. Some properties of the phase equilibrium in a binary system, 456. – 3. Experimental methods for the determination of equilibrium curves, 459. – 4. Survey of Leiden results, 463. – 4.1. H ₂ -N ₂ -mixture and H ₂ -CO-mixture, 464. – 4.2. He-N ₂ -mixture, 466. – 4.3. H ₂ -CH ₄ -mixture, 468. – 4.4. H ₂ -O ₂ -mixture, 471. – 4.5. Some remarks on S + L equilibrium, 475. – 5. Theoretical determination of equilibrium curves, 477.	
ERRATA OF THE VOLUMES I AND II	481
