

CONTENTS

Chapter	Page
I J. S. LANGER and J. D. REPPY, INTRINSIC CRITICAL VELOCITIES IN SUPERFLUID HELIUM	1
1. Introduction, 1. – 2. General aspects of a theory of thermally activated processes in superfluids, 2. – 3. Experimental study of superfluid flow states, 10. – 4. Specific models, 19.	
II K. R. ATKINS and I. RUDNICK, THIRD SOUND	37
1. Summary, 37. – 2. Historical survey, 38. – 3. Theory of third sound on thick films, 41. – 4. Experimental results for thick films, 46. – 5. Third sound on a moving film, 51. – 6. Theory of third sound on very thin films, 54. – 7. Experimental results for very thin films, 58. – 8. The average superfluid density, 61. – 9. The onset thicknesses, 66. – 10. Attenuation, 72.	
III J. C. WHEATLEY, EXPERIMENTAL PROPERTIES OF PURE He ³ AND DILUTE SOLUTIONS OF He ³ IN SUPERFLUID He ⁴ AT VERY LOW TEMPERATURES. APPLICATION TO DILUTION REFRIGERATION	77
1. Introduction, 77. – 2. Experimental properties of pure liquid He ³ at very low temperatures, 84. – 3. Experimental properties of dilute solutions of He ³ in He ⁴ at very low temperatures, 108. – 4. The temperature scale, 132. – 5. Dilution refrigeration in the millidegree range, 142.	
IV R. I. BOUGHTON, J. L. OLSEN and C. PALMY, PRESSURE EFFECTS IN SUPERCONDUCTORS	163
1. Introduction, 163. – 2. Thermodynamics, 164. – 3. Connection with microscopic theory, 169. – 4. Experimental methods, 173. – 5. Experimental results at moderate pressures, 175. – 6. Work at very high pressures, 188. – 7. Pressure effects in type II superconductors, 196.	
V J. K. HULM, M. ASHKIN, D. W. DEIS and C. K. JONES, SUPERCONDUCTIVITY IN SEMICONDUCTORS AND SEMI-METALS	205
1. Introduction, 205. – 2. Semiconducting properties, 207. – 3. Superconducting properties, 215. – 4. Theoretical analysis of T_c , 223. – 5. Conclusion, 238.	

VI R. DE BRUYN OUBOTER and A. TH. A. M. DE WAELE, SUPERCONDUCTING POINT CONTACTS WEAKLY CONNECTING TWO SUPERCONDUCTORS	243
1. Introduction, 243. – 2. Two superconductors weakly connected by a single superconducting point contact (the ac Josephson effect), 251. – 3. The critical current through a double point contact between two superconductors as a function of the applied magnetic field, 264. – 4. Two superconductors weakly connected by a double point contact in the resistive-superconductive region, 275.	
VII R. E. GLOVER, III, SUPERCONDUCTIVITY ABOVE THE TRANSITION TEMPERATURE	291
1. Introduction, 291. – 2. Amorphous superconductors, 294. – 3. Experiments on amorphous bismuth, gallium and lead films, 297. – 4. Fluctuation theories; agreement with amorphous film experiments, 306. – 5. Additional experimental and theoretical results, 317. – 6. Critical fluctuation region, 324. – 7. Conclusion, 327. – 8. Chronology and acknowledgments, 328. – 9. Appendix. Details of amorphous film experiments, 329.	
VIII R. F. WIELINGA, CRITICAL BEHAVIOUR IN MAGNETIC CRYSTALS	333
1. Introduction, 333. – 2. Susceptibility of ferromagnets above the critical temperature, 336. – 3. Spontaneous magnetization, 346. – 4. Specific heat, 350. – 5. Conclusion, 368.	
IX G. R. KHUTSISHVILI, DIFFUSION AND RELAXATION OF NUCLEAR SPINS IN CRYSTALS CONTAINING PARAMAGNETIC IMPURITIES	375
Introduction, 375. – 1. Direct nuclear relaxation by magnetic ions, 376. – 2. Spin diffusion, 379. – 3. Nuclear relaxation when spin diffusion is taken into account, 383. – 4. Nonexponential relaxation, 387. – 5. The role of the DDR of the magnetic ions in nuclear relaxation, 388. – 6. Comparison with experiment I, 394. – 7. Comparison with experiment II, 397.	
X M. DURIEUX, THE INTERNATIONAL PRACTICAL TEMPERATURE SCALE OF 1968	405
1. Introduction, 405. – 2. International practical temperature scales, 406. – 3. The International Practical Temperature Scale of 1948 (IPTS-48), 407. – 4. The International Practical Temperature Scale of 1968 (IPTS-68), 410. – 5. The accuracy and reproducibility of the IPTS-68, 412. – 6. The vapour pressure-temperature relations of O ₂ , N ₂ , Ne and H ₂ , 413. – 7. Differences between the IPTS-68 and other temperature scales, 418. – 8. The 1958 ⁴ He scale and the 1962 ³ He scale, 420. – 8. The range from 5.189 K to 13.81 K, 422.
