

CONTENTS

VOLUME XII

<i>Preface</i>	v
<i>Contents</i>	vii
<i>Contents of previous volumes</i>	xi
<i>Ch. 1. High-temperature superconductivity: some remarks, V.L. Ginzburg</i>	1
1. Introduction	3
2. Significance of HTS. Questions of priority	3
3. Experimental studies of superconductivity	7
4. Microscopic theory of superconductivity.....	12
5. Critical temperature in the BCS theory	15
6. Superconductivity mechanism in the "neon" superconductors	19
7. Superconductivity mechanism in the "nitrogen" superconductors. Ways for raising T_c	21
8. Exciton mechanism of HTS	26
9. Nature of HTS in metal oxides	32
10. Concluding remarks	41
References	41
<i>Ch. 2. Properties of strongly spin-polarized ^3He gas, D.S. Betts, F. Laloë and M. Leduc</i>	45
Introductory remarks	47
1. Theory	47
1.1. Introduction	47
1.2. The interaction potential	51
1.3. Characteristic lengths	52
1.4. Transport properties	54
1.5. Classical transport theory	56
1.6. Quantum mechanical transport theory	59
1.7. Thermal conductivity	66
1.8. Viscosity	67
1.9. Spin diffusion	70
1.10. Equation of state	73
2. Polarisation methods	78
2.1. Optical polarisation of ^3He nuclei	78
2.2. Relaxation processes	89
3. Experiments	93
3.1. Experiments on spin rotation effects and spin waves	93
3.2. Experiments on thermal conductivity	98

3.3. Convection	106
3.4. Liquid-gas equilibrium	109
References	111
<i>Ch. 3. Kapitza thermal boundary resistance and interactions of helium quasiparticles with surfaces, Tsuneyoshi Nakayama</i>	115
1. Introduction	117
2. Kapitza thermal boundary resistance	118
2.1. Definition of the Kapitza resistance R_K	118
2.2. General expression for the Kapitza resistance R_K	120
2.3. Anomalous behaviour of the observed Kapitza resistances	124
2.3.1. The liquid ^3He -sintered powder interface at mK temperatures	124
2.3.2. The liquid He-bulk solid interface above about 1 K	126
3. Fermi liquid theory of the Kapitza resistance.....	128
3.1. Heat transfer due to zero-sound excitations	128
3.1.1. Emission of zero-sound from a small particle into liquid ^3He	128
3.1.2. Heat flux from a spherical particle at temperature T	130
3.1.2.1. Energy current into liquid ^3He	130
3.1.2.2. Kapitza conductance to zero-sound excitations	132
3.2. Energy transfer due to inelastic scattering of single quasiparticles at the interface	135
4. Anomalous Kapitza resistance between sintered powder and liquid ^3He at mK temperatures	140
4.1. Heat exchanger using submicrometer metal particles	140
4.2. Soft phonon-modes in sintered powders	141
4.3. Heat transfer due to the effect of soft phonon-modes.....	144
5. The magnetic channel of heat transfer between sintered powder and liquid ^3He ..	149
5.1. Surface characteristics of submicron metal particles and surface magnetic impurities	149
5.2. Heat transfer due to magnetic coupling at mK temperatures	152
6. Thermal boundary resistance between liquid ^3He - ^4He mixtures and sintered powder	158
6.1. Acoustic channel	159
6.2. Magnetic channel	162
7. Anomalous Kapitza resistance between liquid He and a bulk solid above about 1 K	165
7.1. Kapitza conductance k_K and phonon transmission coefficient across the interface	165
7.2. High-frequency phonon scattering at the liquid He-solid interface	168
7.2.1. Cause of diffuse scattering at the surface without liquid He	171
7.2.2. Specular versus diffuse scattering of bulk phonons	175
7.2.3. Diffuse signals in the time-of-flight reflection signals	176
7.2.4. Reduction of the diffuse signal at the solid surface in contact with liquid He	179
8. Summary	186
Appendix	187
References	189

<i>Ch. 4. Current oscillations and interference effects in driven charge density wave condensates, G. Grüner</i>	195
1. Introduction	197
2. Basic notions and observations in charge density wave dynamics	201
2.1. The charge density wave ground state and model compounds	201
2.2. The dynamics of the collective mode	205
2.3. Frequency and field dependent transport	211
3. Current oscillations	217
3.1. General features	217
3.2. Current-frequency relation	220
3.3. Size effects and fluctuation phenomena	223
3.4. Broad band noise	226
4. Models of charge density wave dynamics	227
4.1. The classical particle model	227
4.2. Models including the internal degrees of freedom	232
4.3. The tunneling model	237
5. Interference phenomena	239
5.1. Harmonic mode locking	239
5.2. Subharmonic mode locking	246
5.3. Nonsinusoidal and pulse drives	255
5.4. Fluctuations and coherence enhancement	259
6. Conclusions	262
List of review papers	265
References	266

<i>Ch. 5. Multi-SQUID devices and their applications, Risto Ilmoniemi and Juhha Knuutila</i>	271
--	-----

1. Introduction	273
2. SQUIDs	273
2.1. Single-junction (rf) SQUIDs	274
2.1.1. General	274
2.1.2. Rf SQUID in the hysteretic mode	276
2.1.3. Discussion	279
2.2. Double-junction (dc) SQUIDs	280
2.2.1. Operation	280
2.2.2. Problems with practical devices	284
2.2.3. The state of the art	286
2.3. Electronics	289
3. Applications: biomagnetism	292
3.1. Measurement techniques	293
3.1.1. Magnetically shielded rooms	293
3.1.2. Gradiometers	295
3.2. Neuromagnetism	296
3.2.1. Origin of neuromagnetic fields	297
3.2.2. Spontaneous activity	298

3.2.3. Evoked fields	299
3.2.4. Clinical aspects of MEG	300
3.3. Cardiac studies	302
3.4. Other biomagnetic applications	303
3.5. Multichannel neuromagnetometers	304
3.5.1. Optimization of multichannel neuromagnetometers	305
3.5.2. Existing multichannel systems	310
3.5.3. Planar gradiometer arrays	319
3.5.4. Use of multichannel magnetometers	323
4. Other multi-SQUID applications	326
4.1. Geomagnetism	326
4.2. Physical experiments	328
4.2.1. Accelerometers and displacement sensors	328
4.2.2. Monopole detectors	329
5. Conclusions	332
References	333
