

CONTENTS

VOLUME XIV

<i>Preface</i>	v
<i>Contents</i>	vii
<i>Contents of previous volumes</i>	xi
<i>Ch. 1. The Landau critical velocity, P.V.E. McClintock and R.M. Bowley</i>	1
1. Introduction	3
2. Quest for the Landau critical velocity	5
2.1. The dispersion curve and excitation creation in He-II	5
2.2. Critical velocity measurements in He-II	8
2.3. Field emission in liquid helium.....	11
2.4. Measurement of ionic drift velocities	13
2.5. Observation of the Landau critical velocity	15
3. Theory of roton creation in He-II	18
3.1. Early theories of supercritical dissipation	18
3.2. Roton creation by a light object.....	19
3.3. Theory of single-roton creation.....	23
3.4. Theory of roton pair creation	28
3.5. Comparison of the theory with experiment.....	33
3.6. A regime of negative resistance?	35
3.7. Roton creation in extremely weak electric fields	38
4. Measurement of the Landau critical velocity	40
4.1. Experimental details.....	40
4.2. Velocity measurements in weak electric fields	46
4.3. The critical velocity	50
4.4. The matrix element for roton pair creation	53
5. Roton creation at extreme supercritical velocities.....	54
5.1. Velocity measurements in high electric fields	54
5.2. Comparison with theory	55
6. Roton creation by "fast" ions.....	61
7. Conclusion	65
References	66

<i>Ch. 2. Spin supercurrent and novel properties of NMR in ^3He, Yu.M. Bunkov.....</i>	69
1. Introduction	71
2. Basic properties	75
2.1. Spatially uniform NMR	79
2.2. Spin supercurrent	85
3. Experimental methods	93
4. NMR and spin supercurrent in $^3\text{He-B}$	98
4.1. Pulsed NMR	98
4.2. CW NMR	103
4.3. Processes of magnetic relaxation	107
4.3.1. Spin diffusion and intrinsic relaxation	107
4.3.2. Surface relaxation	112
4.3.3. Catastrophic relaxation	114
4.4. HPD oscillations	119
5. Steady spin supercurrent.....	124
5.1. Spin supercurrent in a channel	124
5.2. Phase slippage.....	128
5.3. Josephson phenomena.....	132
5.4. Spin supercurrent vortex	134
6. Spin supercurrent in $^3\text{He-A}$	138
6.1. Instability of homogeneous precession	139
7. Spin supercurrent at propagating A-B boundary	146
8. Conclusion	152
Acknowledgments	154
References	154

<i>Ch. 3. Nucleation of the AB transition in superfluid ^3He: experimental and theoretical considerations, P. Schiffer, D.D. Osheroff and A.J. Leggett.....</i>	159
1. Introduction	161
2. Background of the B phase nucleation problem.....	163
3. Experimental history of the B phase nucleation problem.....	167
4. The recent experiments at Stanford	170
4.1. Experimental design	170
4.2. Initial B phase nucleation observations	174
4.3. B phase nucleation by irradiation	177
4.3.1. Data acquisition	177
4.3.2. Dependence on radiation type	179
4.3.3. Dependence on temperature and magnetic field	181
4.4. Monte Carlo simulations	184
5. The baked Alaska model: theoretical considerations	190
6. Conclusions	200
Acknowledgments	203
Appendix A: Probability of depositing energy E in a radius much less than the “typical” radius $R(E)$	204

CONTENTS

ix

Appendix B: Relaxation of the magnetization by flow	206
Appendix C: Analytical model of the thermodynamics of superfluid ^3He	206
References	210
<i>Ch. 4. Experimental properties of ^3He adsorbed on graphite, H. Godfrin and H.-J. Lauter</i>	213
1. Introduction	215
2. Graphite substrates	215
2.1. Exfoliated graphite	216
2.2. Physical properties of exfoliated graphite	217
2.2.1. General properties of different exfoliated graphites.....	217
2.2.2. Chemical impurities	217
2.2.3. Structural properties	218
2.2.4. Specific area.....	219
2.2.5. Electronic properties	219
2.2.6. Specific heat.....	220
2.2.7. Electrical conductivity	221
2.2.8. Thermal conductivity	226
2.2.9. Magnetic susceptibility	228
3. Physical adsorption of ^3He on graphite	229
3.1. Adsorption potentials	230
3.2. Interaction potential and zero point energy in adsorbed layers	233
3.3. Layering	235
3.4. Coverage scales	237
4. Experimental techniques of surface Physics at low temperatures	240
4.1. Experimental details	241
4.1.1. Experimental cells	241
4.1.2. Preparation of the adsorbed ^3He sample	245
4.2 Adsorption isotherms	247
4.3. Heat capacity	248
4.3.1. Guide to the literature	248
4.3.2. Techniques	252
4.4. Nuclear magnetic resonance	253
4.4.1. Guide to the literature	253
4.4.2. Techniques	256
4.5. Neutron scattering	261
4.5.1. Guide to the literature	261
4.5.2. Techniques	262
4.6. Other techniques	269
5. Structure and phase diagram of the adsorbed films	270
5.1. Submonolayer coverages	270
5.1.1. Very low coverages	270
5.1.2. The first layer fluid phase	272
5.1.3. The commensurate phase	279
5.1.4. The intermediate coverage region	285
5.1.5. The incommensurate phase	288
5.2. Second layer	292
5.2.1. The second layer fluid phase	292

5.2.2. Second layer solidification.....	296
5.2.3. The second layer commensurate phase R_{2a}	297
5.2.4. Remarks about the second layer density	300
5.2.5. The second layer intermediate region (0.178 \AA^{-2} to 0.26 \AA^{-2})	301
5.2.6. The second layer incommensurate phase above $n = 0.26 \text{ \AA}^{-2}$	306
5.3. Multilayer films	308
6. Conclusions	312
References	314
<i>Ch. 5. The properties of multilayer ^3He-^4He mixture films,</i> <i>R.B. Hallock</i>	321
1. Introduction	323
2. Bulk interfaces.....	324
2.1. The bulk free surface	324
2.2. The bulk-wall interface.....	329
2.3. Other surfaces	333
3. Helium films.....	334
3.1. Theoretical overview	334
3.2. Thickness scales	344
3.3. Energetics experiments	345
3.3.1. Heat capacity experiments	345
3.3.2. Nuclear magnetic resonance experiments	355
3.4. Other experiments.....	387
3.4.1. Third sound experiments.....	387
3.4.2. Oscillator measurements	416
3.4.3. Selected other experiments	425
3.5. Future directions	433
4. Summary	435
Acknowledgments	435
References	436
<i>Author Index</i>	445
<i>Subject Index</i>	463
