

Contents of Volume 4

INVITED PAPERS

Test techniques K. Schwalbe	1421
High strain fracture analysis C. K. Tsai, H. W. Shen, X. X. Chen, L. G. Luo and M. Z. Zheng	1447
Mechanisms and mechanics of fracture of concrete F. H. Wittmann	1467
 <i>Theme 3</i> PHYSICAL FRACTURE PROCESSES - STRUCTURAL ASPECTS	
E. Concrete (I)	
Experimental determination of fracture toughness parameter K_{ic} and J_{ic} for aggregative materials A. Carpinteri	1491
Mechanical damage and fracture of concrete structures J. Mazars	1499
Crack propagation in prestressed concrete. Interaction with reinforcement S. Chhuy, M. E. Benkirane, J. Baron and D. Francois	1507
Fracture mechanical calculations, test methods and results for concrete and similar materials A. Hillerborg and P. E. Petersson	1515
Propagation of crack bands in heterogeneous materials Z. P. Bazant and L. Cedolin	1523
Experimental investigations based on the Griffith-Irwin theory processes of the crack development in concrete A. P. Pak and L. P. Trapeznikov	1531

F. Ceramics (I)

The mechanism and mechanics of subcritical crack propagation in hot-pressed SiC above 1000 degree C J. L. Henshall	1541
Fracture strength and toughness of engineering nitrogen ceramics G. Orange, D. Chavez, J. Dubois and G. Fantozzi	1551
The significance of microstructure to the fracture toughness of partially-stabilized zirconia M. V. Swain and R. H. J. Hannink	1559
Fractographic identification of subcritical to critical crack growth transition mechanisms in ceramics H. P. Kirchner and R. M. Gruver	1567
Conditions for toughening of particulate brittle composites V. D. Krstic and A. K. Khaund	1577

J. Creep Fracture and Related Phenomena: Metallurgical Aspects (I)

Metallographic aspects of creep fracture in a cast Ni-Cr-Base alloy H. R. Tipler	1587
Creep fracture behavior of austenitic stainless steels from 550 to 800 degrees C T. L. Silveira and S. N. Monteiro	1595
Creep ductility and fracture in austenitic steels K. Detert, H. Kanbach, M. Pohl and E. H. Schmidtmann	1603
Effects of microstructural degradation on creep life prediction of 2-1/4 Cr - 1 Mo steel A. M. Abdel-Latif, J. M. Corbett, D. Sidey and D. M. R. Taplin	1613
Creep embrittlement of Cu-Au alloy, studied in situ by Scanning Auger Microscopy W. Losch and J. Kirschner	1621
The growth of intergranular cavities during creep of an alpha brass L. E. Svensson and G. L. Dunlop	1627

K. Creep Fracture and Related Phenomena: Metallurgical Aspects (II)

The fracture characteristics of Al and Al-5% Mg at elevated temperatures T. G. Langdon and R. B. Vastava	1635
Intergranular creep damage and fracture criteria V. Sklenicka, I. Saxi and J. Cadek	1643
A metallographic study of torsional superplastic fracture in Zn-22% Al eutectoid alloy A. Arieli, R. W. Logan and A. K. Mukherjee	1651

On the relation between the creep mechanism and creep fracture A. Arieli and A. K. Mukherjee	1657
A model for the initiation of cavitation and its application to the creep fracture of 316 stainless steel G. A. C. Boyd and J. L. Henshall	1665
 <i>Theme 4</i>	
ELASTOPLASTIC FRACTURE MECHANICS CRITERIA	
 <i>C. Ductile Failure in Plane Stress</i>	
A new approach for fracture toughness characterization of ductile metal sheet S. Shimizu and S. Kawano	1675
Plane stress ductile fracture B. Cotterell and Y. W. Mai	1683
An elastic-plastic fracture model of plane stress and its finite element analysis H. Lin and W. T. Chiang	1697
Plane stress fracture under biaxial loading I. S. Abou-Sayed, D. Broek, T. P. Forte and R. B. Stonesifer	1707
Strain dependence of the J-contour integral in tensile panels D. T. Read and H. I. McHenry	1715
 <i>D. J Integral, COD Design</i>	
Simplified determination of J-integral and its availability as a strain intensity parameter at notch tip K. Satoh and M. Toyoda	1723
Fracture assessment in ductile tearing situations O. L. Towers and S. J. Garwood	1731
Instability problems in ductile fracture M. P. Wnuk	1741
Calculating the load bearing capacity of a structure failing by ductile crack growth I. Milne	1751
The analysis of stable crack growth in type 304 stainless steel S. G. Sampath, I. S. Abou-Sayed, D. Broek, C. Marschall, A. Zahoor and M. F. Kanninen	1759
Development of the nonlinear energy method for fracture toughness determination D. L. Jones, J. D. Lee and H. Liebowitz	1769

Theme 5
FATIGUE

I. Spectrum Loading Fatigue

The effect of overloading on fatigue crack propagation in two aluminium alloys and an austenitic stainless steel

P. M. Powell, P. J. E. Forsyth and T. R. G. Williams

1781

Influence of specimen geometry on delayed retardation phenomena of fatigue crack growth in HT80 steel and A5083 aluminium alloy

K. Tanaka, S. Matsuoka, V. Schmidt and M. Kuna

1789

An estimation method of fatigue crack propagation rate under varying loading conditions of low stress intensity level

M. Kikukawa, M. Jono and Y. Kondo

1799

Fatigue crack growth under constant and variable amplitude loading of cast steel at room and low temperature

R. I. Stephens, G. O. Njus and A. Fatemi

1807

On the conditions of fatigue crack propagation under programmed loading

V. Safta, T. Schulz and I. Arghiriade

1815

Practical application of a model for fatigue damage with irregular cyclic loading

H. Fuhring

1823

J. Mixed Mode Fatigue

Fatigue crack propagation behavior under complex mode loading

F. Hourlier and A. Pineau

1833

Experimental study of fatigue crack growth under biaxial loading

M. Truchon, M. Amestoy and K. Dang-Van

1841

Mode II fatigue crack growth in aluminium alloys and mild steel

A. Otsuka, K. Mori, T. Ohshima and S. Tsuyama

1851

An energy approach to three dimensional fatigue crack growth problems

R. Labourdette and G. Baudin

1859

Theme 6

INFLUENCE OF ENVIRONMENT ON FATIGUE TOUGHNESS

B. Hydrogen (I)

Mechanisms of environmentally-assisted fatigue crack growth in low strength steels

S. Suresh and R. O. Ritchie

1873

Influence of metallurgical factors on hydrogen-induced brittle fracture in austenitic stainless steels

H. E. Hanninen and T. J. Hakkarainen

1881

Cathodic hydrogenation of austenitic alloys in molten salts bath, at 200 or 300 degrees C: Study of hydrogen induced embrittlement H. Andriamiharisoa, M. Habashi, J. Galland and P. Azou	1889
A criterion for hydrogen-induced fracture K. Akhurst	1899
<i>C. Hydrogen (II)</i>	
Influence of hydrogen on fracture toughness of high strength steels H. Kobayashi, K. Hirano, H. Kayakabe and H. Nakazawa	1909
Gaseous oxygen and hydrogen embrittlemets of a U-7.5 Nb - 2.5 Zr alloy D. Lepoutre, A. M. Nomine and D. Miannay	1917
The role of non-metallic inclusions in hydrogen assisted cracking of steel T. V. Venkatasubramanian and T. J. Baker	1925
Hydrogen effect in static or dynamic fractures of martensite-carbides composite structures L. Vincent, D. Ray, B. Coquillet and P. Guiraldenq	1935
The effect of hydrogeneous environments on the fracture toughness of power plant steels R. Viswanathan, J. D. Landes, D. E. McCabe and S. J. Hudak	1945
<i>Theme 7</i>	
TEST TECHNIQUES	
<i>D. Crack Length Measurements (I)</i>	
Progress in potential drop technique. Application to three-dimensional crack fronts G. Baudin and H. Policella	1957
A. C. Field measurments: A new method for detecting and measuring fatigue cracks W. D. Dover, F. D. W. Charlesworth and K. A. Taylor	1965
Measurements and mechanisms of crack growth at elevated temperatures up to 1273 K K. Krompholz, E. D. Grosser, J. Bottner and J. B. Pierick	1975
A technique for measuring crack length and load in compact fracture mechanics specimens using strain gauges W. F. Deans and C. E. Richards	1989
Bidirectional coupling of a cracking test machine to a calculator J. C. Bonvalet and I. Launay	1997
Fatigue crack growth under controlled K G. A. D. Briggs and R. A. Smith	2005

E. Crack Length Measurements (II)

Crack detection by ultrasonic methods: Theory and experiment

J. D. Achenbach and L. Adler

2013

High and medium frequency non destructive testing of the
thermal shock resistance of ceramics

J. C. Glandus and P. Boch

2023

The fracture toughness - microstructure relationship of alumina-based ceramics

B. J. Dalgleish, A. Fakhr, P. L. Pratt and R. D. Rawlings

2031

Acoustic emission in rock fracture analysis

M. Thiercelin and M. Dayre

2039

A study of stress corrosion cracking in high strength steels
using acoustic emission techniques

G. Green and P. McIntyre

2049
