

C O N T E N T S

PREFACE

I. INTRODUCTION

DYNAMICAL PROPERTIES OF CHARGE CARRIERS IN DIELECTRICS 1-27

Y. Toyozawa

1. Introduction	1
2. Polarizability	2
3. Dielectric function	6
4. A classical charged particle moving in dielectrics	13
5. Quantum mechanics of a charged particle in dielectrics	18

THE FRÖHLICH POLARON CONCEPT 29-80

R. Evrard

1. Introduction	30
2. Derivation of Fröhlich's polaron hamiltonian	30
2.1 The concept of Fröhlich's polarons	30
2.2 Long wave-length optical vibrations of the lattice	33
2.3 The free-phonon hamiltonian	43
2.4 Free-electron and phonon-electron interaction hamiltonians	49
2.5 Validity of the harmonic approximation	56
3. Properties of Fröhlich's hamiltonian and "classic" approaches to its solution	58
3.1 Invariance of Fröhlich's hamiltonian	58
3.2 Excitation spectrum of polarons	58
3.3 The case of a classical distribution of charge in an ionic crystal	64
3.4 Perturbation method	67
3.5 Lee, Low, Pines method	70
3.6 The strong coupling methods	74
3.7 Feynman's method and conclusion	78

II. OPTICAL PROPERTIES

INTERNAL STRUCTURE OF FREE FRÖHLICH POLARONS OPTICAL ABSORPTION AND CYCLOTRON RESONANCE 83-159

J.T. Devreese

Part I

1. Optical absorption of polarons at weak coupling	84
1.1 Optical absorption and the Golden rule. Elimination of the intermediate states from the Golden rule	84
1.2 Calculation of the translation probability in the weak coupling limit using the Lee-Low-Pines canonical transformation	87
1.3 Corrections to the perturbation result for $0 < \alpha < 1$	93
1.4 Influence of a static electric field on the (weak coupling) optical absorption of polarons	94
1.5 Survey of the optical absorption of polarons at weak coupling	94
2. Optical absorption of polarons at strong coupling	95
2.1 The zero-phonon peak	99
2.2 One-phonon sideband	101
2.3 Note on two-phonon sideband and two-phonon effects	103
2.4 Discussion of the strong coupling treatment of K.E.D.	108
3. Quadratic approximation to the optical absorption of free polarons	108
3.1 Introduction	108
3.2 General scope	109
3.3 General formulas for the impedance of the polaron as obtained by F.H.I.P.	110
3.4 The optical absorption coefficient of polarons in the quadratic approximation	112
3.5 Numerical result	115
3.6 Discussion of the quadratic approximation to the optical absorption of polarons	115
4. Further comments on the quadratic approximation of the optical absorption of polarons	129
5. Conclusions concerning the optical absorption of polarons at $T=0$ and in the low density limit	129

Part II

1. Theory of cyclotron resonance of Fröhlich polarons in the Born-Oppenheimer approximation	131
1.1 Landau gauge	132
1.2 Symmetrical gauge	133
1.3 Degeneracy of Landau levels	134

1.4 Born-Oppenheimer approximation for a polaron in a magnetic field	134
1.5 Discussion	141
1.6 Conclusions on polarons in magnetic fields	146
General conclusions	146
Appendix A	148
Appendix B	152
Appendix C	153

THE INFLUENCE OF THE POLARON INTERACTION ON THE FUNDAMENTAL OPTICAL ABSORPTION OF IONIC CRYSTALS 161-191

G. Ascarelli

1. Introduction	162
2. Optical absorption - direct edge	162
3. Indirect absorption edge	169
4. Cyclotron resonance of the electron in AgBr	183

BOUND POLARONS AND WANNIER EXCITONS IN POLAR CRYSTALS - PERTURBATION APPROACH 193-225

K.K. Bajaj

1. Introduction	194
2. Energy levels of a bound polaron	194
2.1 Theory	194
2.2 Comparison with experimental results	203
3. Groundstate energy of a Wannier exciton in a polar crystal	210
Appendix A	220

INDUCED INFRARED ABSORPTION BY BOUND FRÖHLICH POLARONS IN THE SILVER AND ALKALI HALIDES 227-233 (seminar)

R.C. Brandt

1. Introduction	227
2. Experimental techniques	227
3. Experimental results	228
4. Theoretical interpretation of the silver bromide data	231
5. Conclusion	232

III. RESONANT ELECTRON-PHONON INTERACTION

POLARON ENERGY LEVELS IN MAGNETIC AND COULOMB FIELDS

237-287

D.M. Larsen

1. Intermediate coupling theory of polaron energy spectrum	238
2. Polaron effective mass theory	247
A. Weak magnetic fields	249
B. Slowly varying potentials	252
C. Applications to variational calculations	253
3. Polaron Landau levels in arbitrarily strong magnetic fields	255
4. Cyclotron resonance of polarons in CdTe	266
5. The polaron hydrogenic atom	272
Appendix	285

RESONANT ELECTRON-PHONON INTERACTIONS IN SOLIDS

289-299

S. Rodriguez

RESONANT ELECTRON-OPTIC MODE COUPLING IN POLAR SEMICONDUCTORS

301-346

P.G. Harper

1. Non-quantum resonances	302
1.1 Introduction - ionicity	302
1.2 Short and long-range inter-ionic forces	303
1.3 Polar modes of oscillation	304
1.4 Charged particle in an ionic crystal	307
1.5 Electron-ion plasma oscillations	309
1.6 Infra-red optics of the electron-ion plasma in a magnetic field	311
2. Quantum representations	316
2.1 Electron quantum states	316
2.2 The Fröhlich hamiltonian and its representation	320
3. Resonant electron-phonon interaction	324
3.1 Magneto-phonon conductivity	324
3.2 Polaron states	329
4. Resonant polaron optics	340
4.1 Cyclotron absorption	340
4.2 Inter-band absorption	342
4.3 Light scattering	344

EXPERIMENTAL OBSERVATIONS OF INTERACTIONS
BETWEEN CHARGE CARRIERS AND PHONONS IN
SEMICONDUCTORS
(seminar)

347-357

K.J. Button and D.R. Cohn

1. Introduction	348
2. Optical polaron cyclotron resonance	349
3. Pinning of Zeeman-split donor states	351
4. Experimental apparatus and techniques	355
A. Fourier transform spectroscopy	355
B. Molecular gas laser spectrometer	356
5. Summary	357

IV. TRANSPORT PROPERTIES

FEYNMAN METHODS APPLIED TO
ELECTRON-PHONON SYSTEM

361-388

K.K. Thornber

1. Introduction	362
2. Transport problem	363
3. Operators concerning the structure of the polaron	367
4. Formulation in terms of electron coordinates alone	370
5. The method of approximation and a result	378
6. The self-consistent solution	386
7. Conclusion	388

EXPERIMENTAL STUDY OF THE ELECTRONIC
TRANSPORT PROPERTIES OF
IONIC CRYSTALS

389-459

J.W. Hodby

1. Introduction	389
2. Experimental techniques for the study of electronic transport processes in insulating solids	392
A. Principles	392
B. Review of experimental techniques	397
C. The design of a pulse-averaging detection system for study of photo-currents in insulating solids	399
3. General review of the electrical transport properties of the alkali, silver and thallium halides	405

4. Study of cyclotron resonance and of the onset of the quantum limit in the alkali, silver and thallium halides	412
A. Introduction	412
B. Cyclotron resonance in the alkali and silver halides	427
C. The dependence on the lattice temperature of the cyclotron resonance of electrons in AgBr	433
5. Spin-dependent phenomena in the electronic transport processes of the alkali and silver halides	435
A. Introduction	435
B. Simple theory of spin-dependent processes	438
C. The distinction between scattering and trapping events	445
6. The effect of hyperfine interactions on electronic transport in the alkali halides	449

V. ALTERNATIVE FORMULATIONS

DYNAMICAL THEORY OF THE LARGE POLARON GREEN'S FUNCTION APPROACH	463-513
--	---------

D. Matz

1. Green's functions	464
1.1 Introduction	464
1.2 Definition of the electron and phonon Green's functions	465
1.3 Equations of motion and the self-energy	469
1.4 Feynman diagrams	472
2. The Fock approximation and translational invariance	478
2.1 Difficulties in the application of Green's functions to the polaron	478
2.2 Translationally non-invariant Fock approximation	481
2.3 The nature of translational invariance	487
3. New approach to the polaron problem	494
3.1 Mathematical formulation	494
3.2 Recoil representation	501
3.3 Numerical solutions	505
3.4 Some final considerations	509

EQUATION OF MOTION APPROACH
TO CONTINUUM POLARON THEORY
(seminar)

515-550

E. Kartheuser

1. Introduction	516
2. General formalism	517
3. Weak coupling limits	522
a. polaron mass as a function of its velocity	525
b. polaron energy as a function of its momentum	527
4. The renormalization of the electron mass at weak coupling	528
a. polaron mass as a function of its velocity	531
b. energy of the groundstate	533
c. mobility at low temperature	534
d. high field mobility of the polaron at zero temperature	540
e. absorption of light by free polarons	544

VI. ASPECTS OF ELECTRON-PHONON
COUPLING IN SEMICONDUCTORS

POLARONS IN HEAVILY DOPED SEMICONDUCTORS 553-657

G.D. Mahan

1. Introduction	554
2. Mathematical definitions	555
2.1 Creation and destruction operators	555
2.2 The hamiltonian	557
2.3 The spectral function	561
2.4 Electrons self-energy	561
2.5 The imaginary self-energy	564
2.6 The effective interaction	567
2.7 Free electron polarization	570
3. Polarons in insulators	575
3.1 Polar coupling	575
3.2 Self-energy from polar coupling	580
3.3 Piezoelectric coupling to acoustical phonons	587
3.4 Self-energy from piezoelectric coupling	598
4. Dielectric screening in impure semiconductors	610
4.1 Introductory remarks	610
4.2 Screening the electron-phonon interaction	613
4.3 Polar coupling to optical phonons	616
4.4 Piezoelectric coupling to acoustical phonons	619
5. Phonon modes in degenerate semiconductors	623
5.1 Polar coupling to optical phonon modes	623
5.2 Acoustical phonon modes	629

6. Electron self-energy	632
6.1 Introductory comments	632
6.2 Polar coupling to optical modes	634
6.3 Acoustical phonons	639
6.4 Electron-electron interactions	639
7. Polarons in electron-tunneling	640
7.1 Introduction to tunneling	640
7.2 Single-particle tunneling	646
7.3 Many-body theory of tunneling	649

FIRST PRINCIPLES ENERGY BAND CALCULATIONS
AND OBSERVATION OF OPTICAL PHONONS BOUND
TO A NEUTRAL ACCEPTOR
(seminar)

659-675

T.C. Collins

1. Introduction	659
2. Electron band structure of semiconductors	659
A. Background	659
B. Results of models	661
3. The acceptor-LO phonon complex	669
A. Background	669
B. Experimental results	671
4. Conclusion	674

VII. SMALL POLARONS

THE SMALL POLARON CONCEPT AND ITS
USE FOR THE INTERPRETATION OF D.C.
AND OPTICAL PROPERTIES OF SEMICON-
DUCTING TRANSITION METAL OXIDES

679-714

H.G. Reik

1. Introduction : the concept of the small polaron	680
2. The Holstein hamiltonian	682
3. The current correlation function	686
4. The z-dependence of $P(z)$	690
5. The Kubo integrations	692
6. Discussion	698
7. Optical effects at low temperatures	704
8. Interpretation of optical and D.C. properties of semiconducting transition metal oxides in terms of the small polaron picture	708
9. Comments and guide to the literature	711

APPENDICES

DIELECTRIC PROPERTIES OF POLAR CRYSTALS 717-733

E.Kartheuser

A RESONANCE OF THE ELECTRONIC POLARON APPEARING
IN THE OPTICAL ABSORPTION OF ALKALI HALIDES 735-746

J.Devreese, A.B.Kunz and T.C.Collins

THE EFFECT OF PHONON FLUCTUATIONS ON THE ENERGY
LEVELS OF AN ELECTRON BOUND TO A COULOMB POTEN-
TIAL IN A POLAR SEMICONDUCTOR 747-754

M.H.Engineer and N.Tzoar

POSTDEADLINE MANUSCRIPT

POLARONS AND PLASMA-PHONON INTERACTIONS IN A MAGNE-
TIC FIELD 755-782

B.Lax

AUTHOR INDEX 785-798

SUBJECT INDEX 799-809
