

CONTENTS

PART I: METHODS AND INSTRUMENTATION IN NEUTRON INTERFEROMETRY

1. Principles and methods of neutron interferometry U. Bonse	3
2. Variations in interferometer types W. Graeff	34
3. Two-crystal neutron interferometry A. Zeilinger, C.G. Shull, M.A. Horne, and G.L. Squires	48
4. Studies on dynamical diffraction phenomena of neutrons using wave fan and total reflection properties S. Kikuta	60
5. The D18 diffractometer for neutron interferometry at the ILL W. Bauspiess	76
6. Experience with the production of single-crystal interferometers W. Treimer	87
7. Applications of the Fresnel diffraction of neutrons A.G. Klein and G.I. Opat	97
8. Intensity profiles and interference properties of LLL interferometers D. Petrascheck	108
9. Integrated intensities and flipping ratios in neutron diffraction by perfect magnetic crystals J.P. Guigay and M. Schlenker	135
10. Investigation of nearly perfect magnetic single crystals by means of neutron diffraction H.H. Schmidt and K. König	149

PART II: APPLICATION OF NEUTRON INTERFEROMETRY

1. Scope of neutron interferometry H. Rauch	161
2. Scattering lengths L. Koester	195
3. Gravitational and rotational effects on the neutron phase S.A. Werner, J.-L. Staudenmann, R. Colella, and A.W. Overhauser	209
4. Spin rotation during neutron interferometry, operationalism and the active view of symmetry invariance H.J. Bernstein	231
5. Some magnetic and spin effects in neutron interferometry A. Zeilinger	241

6. Magnetic substances and fields in the neutron interferometer E. Balcar	252
7. Neutron spin interference effects F. Mezei	265
8. The representation of neutron polarization J. Byrne	273
9. Interferometry with polarized neutrons G. Badurek	286
10. Some principles of the behaviour of neutrons in magnetic structures resulting from the dynamic theory of diffraction O. Schärpf	304
11. Matter and light wave interferometry in gravitational fields L. Stodolsky	313
12. Phase considerations in a rotating system L.A. Page	327
13. Neutron versus electron diffraction: a paradox resolved D.M. Greenberger and A.W. Overhauser	339
14. Amplitude interference and interferometry Ming Chiang Li	346
15. Fizeau effects for thermal neutrons M.A. Horne and A. Zeilinger	350
16. Laue case dynamical neutron diffraction with perfect non-magnetic crystals in magnetic fields A. Zeilinger	355

PART III: RELATED TECHNIQUES OF INTERFEROMETRY

1. Electron interferometry G. Möllenstedt and H. Lichte	363
2. Multiple-wavelength interferometry with X-rays and neutrons M. Hart and D.P. Siddons	389
3. X-ray interferometry: the optical to gamma ray connection R.D. Deslattes	399
4. A two-crystal X-ray interferometer for precision measurements of lattice parameters: present state and prospects P. Becker	416
5. Use of synchrotron radiation in X-ray interferometry G. Materlik	431
6. Optical interferometry M. Françon	447
7. Study of solids by submillimetre-wave interferometry J.F. Angress and T.J. Parker	462
8. Spin interferometry and phase relations in three-level systems M. Mehring, M.E. Stoll, and E.K. Wolff	479
