|-----------------------------------------------------------------------------------------------------|----|
| <b>1. General Remarks</b>                                                                           | 1  |
| <b>2. Gain-Bandwidth Product for Photoconductors—Part I</b>                                         | 4  |
| <b>3. Recombination</b>                                                                             | 11 |
| Insulators                                                                                          | 12 |
| 3.1 Single Set of Recombination Centers ( $n, p < n_r, p_r$ ) [Low Light]                           | 13 |
| 3.2 Single Set of Recombination Centers ( $n, p > n_r, p_r$ ) [High Light]                          | 16 |
| 3.3 Single Set of Recombination Centers and of Traps ( $n + n_t, p + p_t < n_r, p_r$ ) [Low Light]  | 18 |
| 3.4 Single Set of Recombination Centers and of Traps ( $n + n_t, p + p_t > n_r, p_r$ ) [High Light] | 22 |
| 3.5 Transition Range ( $n_r > n + n_t > p_r; n + n_t > p + p_t$ )                                   | 22 |
| 3.6 Electronic Doping                                                                               | 24 |
| 3.7 Demarcation Levels                                                                              | 26 |
| 3.8 Some Significant Models                                                                         | 33 |
| 3.9 Model to Account for Combination of $\tau$ -Constant and $\tau_0 \propto F^{-1}$                | 34 |
| 3.10 Model to Account for $I_p \propto F^\alpha; (\frac{1}{2} \leq \alpha \leq 1)$                  | 38 |
| 3.11 Sensitization                                                                                  | 43 |
| 3.12 Supralinearity                                                                                 | 48 |
| 3.13 Infrared and Thermal Quenching                                                                 | 51 |
| Semiconductors                                                                                      | 53 |
| 3.14 Semiconductors Equal Electron and Hole Lifetimes                                               | 54 |
| 3.15 Semiconductors: Unequal Electron and Hole Lifetimes                                            | 59 |
| 3.16 Transition from "Semiconductor" to "Insulator"                                                 | 62 |
| 3.17 Negative Photoconductivity                                                                     | 64 |
| <b>4. Space Charge-Limited Current Flow</b>                                                         | 69 |
| 4.1 Trap-Free and Shallow-Trap Problems                                                             | 69 |
| 4.2 Deep Traps                                                                                      | 72 |
| 4.3 Field and Charge Distribution                                                                   | 75 |
| 4.4 Transient Effects                                                                               | 77 |

|                                                                               |            |
|-------------------------------------------------------------------------------|------------|
| <b>5. Gain-Bandwidth Product—Part II</b>                                      | <b>82</b>  |
| 5.1 Trap-Free and Shallow-Trap Photoconductors                                | 82         |
| 5.2 Photoconductors with Deep Traps                                           | 86         |
| 5.3 Effect of Trapping Times Larger than Lifetimes                            | 90         |
| 5.4 <i>N-P-N</i> Junction Photocell                                           | 91         |
| 5.5 Comparison of Photoconductor Amplifiers and Solid-State Triode Amplifiers | 94         |
| <b>6. Noise Currents</b>                                                      | <b>97</b>  |
| 6.1 General Formalism                                                         | 97         |
| 6.2 Photon Currents                                                           | 99         |
| 6.3 Emission-Limited Currents                                                 | 99         |
| 6.4 Photomultipliers                                                          | 100        |
| 6.5 Photoconductors (Trap Free)                                               | 100        |
| 6.6 Johnson Noise                                                             | 104        |
| 6.7 Current Noise in Semiconductor with Traps                                 | 105        |
| 6.8 Space-Charge-Limited Currents                                             | 107        |
| 6.9 Photoconductor-Including Traps                                            | 108        |
| 6.10 Comparison of Noise Limitations for Photoconductors and Optical Masers   | 111        |
| 6.11 Comparative Noise Power in the Radio and Optical Spectra                 | 112        |
| 6.12 General Comments on Noise                                                | 114        |
| <b>7. Capture Cross Sections</b>                                              | <b>118</b> |
| 7.1 Free-Free Capture                                                         | 119        |
| 7.2 Coulomb Capture                                                           | 121        |
| 7.3 Capture by Repulsive Coulomb Centers                                      | 126        |
| 7.4 Macroscopic Barriers                                                      | 127        |
| <b>8. Electrical Contacts</b>                                                 | <b>129</b> |
| 8.1 Neutral Contacts                                                          | 129        |
| 8.2 Blocking Contacts                                                         | 131        |
| 8.3 Ohmic Contacts                                                            | 134        |
| 8.4 Metal-Semiconductor Contacts                                              | 143        |
| 8.5 Electrolyte-Semiconductor Contacts                                        | 145        |
| 8.6 Metal-Electrolyte Contacts                                                | 146        |
| <b>9. Energy Levels in Solids and Electrolytes</b>                            | <b>150</b> |
| 9.1 Cohesive Energies, Electron Affinities, and Forbidden Gaps                | 151        |
| 9.2 Energy Levels in Electrolytes and Solids                                  | 157        |
| <b>Symbols</b>                                                                | <b>161</b> |
| <b>Index</b>                                                                  | <b>165</b> |
