CONTENTS I Fundamental Considerations

- 1.1 Introduction
- 1.2 Definitions in thermodynamics 2

1

E

- 1.3 Units and dimensions 3
- 1.4 Laws of thermodynamics 5
- 1.5 Properties of fluids 8
- 1.6 Viscosity 11
- 1.7 Dimensional analysis and the Buckingham pi theorem 14
- 1.8 Fluid friction 17
- 1.9 Laminar flow 19
- 1.10 Turbulent flow 20
- 1.11 Configuration and drag losses 21

2 Conservation Laws in Fluid Flow 24

- 2.1 Introduction 24
- 2.2 Conservation of mass; continuity equation 25
- 2.3 Conservation of energy (first law of thermodynamics); steady flow energy equation 27
- 2.4 Momentum equation 31
- 2.5 Entropy changes in fluid flow 35
- 2.6 Stagnation states 37

3 Wave Motion, Mach Number 42

- 3.1 Pressure waves and sonic velocity 42
- 3.2 Acoustic waves 45
- 3.3 Finite waves 49
- 3.4 Mach number 52
- 3.5 One-dimensional steady flow equations in terms of Mach number 55

4 Force Balance and Thrust 60

- 4.1 Introduction 60
- 4.2 Calculation of propulsive forces 61
- 4.3 External thrust and drag 65
- 4.4 Special considerations of rocket thrust 67
- 4.5 Thrust as a pressure integral 69
- 4.6 The thrust function 70

5 Adiabatic Flow 74

- 5.1 Introduction 74
- 5.2 Fluid properties in adiabatic flow 75
- 5.3 Effects of area variation 79
- 5.4 Reference states 82
- 5.5 Tables for isentropic flow 85
- 5.6 Mass flow and choking in isentropic flow 88
- 5.7 Thrust in isentropic flow 94
- 5.8 Losses in adiabatic flow 95

6 Adiabatic Flow in Constant-Area Ducts 103

- 6.1 Introduction—Fanno lines 103
- 6.2 Fanno relations for perfect gases 106
- 6.3 The nature of the loss 108
- 6.4 Reference states 111
- 6.5 Fanno tables 112
- 6.6 Choking resulting from friction or drag 113

7 Normal Shock 116

- 7.1 Occurrence of shocks 116
- 7.2 Fundamental equations for normal shock 117
- 7.3 Normal shock equations for a perfect gas 118
- 7.4 Tables for normal shock 120
- 7.5 Impossibility of shock from subsonic to supersonic flow 121
- 7.6 Shock strength 123
- 7.7 Shocks in a converging-diverging nozzle 124

Contents

8 Flow with Heating or Cooling 131

- 8.1 Introduction to heat-exchange systems 131
- 8.2 Fundamental equations for simple heating or simple cooling the Rayleigh line 132
- 8.3 Rayleigh equations for a perfect gas 136
- 8.4 Reference state and Rayleigh tables 138
- 8.5 Isothermal flows in long ducts 139
- 8.6 Heating or cooling with friction 142

9 Moving and Oblique Shock Waves 146

- 9.1 Introduction 146
- 9.2 Propagating normal shock waves 147
- 9.3 Oblique shocks 150
- 9.4 The deflection angle 153
- 9.5 Mach lines 155
- 9.6 Compression by turning in supersonic flow 156
- 9.7 Prandtl-Meyer expansions 157

10 Method of Characteristics 163

- 10.1 Natural coordinate system 163
- 10.2 Equations of motion for isentropic (irrotational) flow 166
- 10.3 Characteristics 167
- 10.4 Dependence and influence-networks for flow types 170
- 10.5 Calculation procedures 172
- 10.6 Example of computation with method of characteristics 175
- 10.7 The design of supersonic nozzles 176
- 10.8 Weak waves as characteristics—field method 177

11 Generalized One-Dimensional Gas Dynamics 181

- 11.1 Introduction 181
- 11.2 The generalized flow equation 182
- 11.3 The reference state and the generalized compressible flow function 183
- 11.4 Application of generalized compressible flow function to specific processes 187
- Appendix 195
