Preface	ix
1 Introduction	1
2 The Muon Spin Rotation Technique	
2.1 The basic principles	7
2.1.1 <i>Muon properties and muon decay</i>	7
2.1.2 <i>Production of spin polarised muon beams</i>	10
2.1.3 <i>Range and stopping distribution in matter</i>	14
2.1.4 <i>μSR signal</i>	15
2.2 Experimental techniques	20
2.2.1 <i>Time differential spectroscopy in zero, longitudinal and transverse fields</i>	20
2.2.2 <i>Integral techniques: stroboscopic and magnetic resonance spectroscopy</i>	27
2.3 Dipolar relaxation	43
2.3.1 <i>Transverse fields</i>	43
2.3.2 <i>Inclusion of quadrupole effects</i>	47
2.3.3 <i>Zero and longitudinal fields</i>	48
2.4 Total magnetic field at the μ^+	56
3 Muon Spin Rotation in Metals: Localisation, Diffusion, Trapping	
3.1 Small polaron state of μ^+ in metals—a variation of the hydrogen in metals problem	60
3.2 Classification of possible motional modes of μ^+ in metals	69
3.3 Modification of static dipolar relaxation function in presence of diffusion	78
3.3.1 <i>Motional narrowing in transverse fields</i>	78
3.3.2 <i>Effect of diffusion on zero field relaxation function</i>	83

3.3.3	<i>Effect of trapping on transverse field relaxation function</i>	87
3.3.4	<i>Effect of trapping on zero field (Kubo–Toyabe) relaxation function</i>	93
3.4	Diffusion and relaxation in presence of dilute magnetic impurities	94
3.5	Coherent diffusion and spin relaxation in BCC ferromagnets	97
3.6	Longitudinal relaxation in magnetically ordered systems	100
3.7	Change of precession frequency and amplitude in the presence of trapping	104
3.8	Short review of μ^+ diffusion results in metals and a comparison with hydrogen data	105
3.8.1	<i>FCC metals: Cu, Al, Au, Ag</i>	106
3.8.2	<i>BCC metals: Nb, Fe</i>	118
4	Hyperfine Fields at the μ^+ in Metals	
4.1	Hyperfine fields, Knight shift and their relation to local electronic structure	128
4.1.1	<i>Introduction</i>	128
4.1.2	<i>Isotropic Knight shift</i>	129
4.1.3	<i>Anisotropic Knight shift</i>	133
4.1.4	<i>Diamagnetic screening</i>	135
4.1.5	<i>Total Knight shift</i>	135
4.2	Short survey on theoretical calculations of spin densities at the μ^+	136
4.3	Experimental results of μ^+ Knight shift investigations	141
4.3.1	<i>Systematics in simple metals</i>	141
4.3.2	<i>Temperature dependence in Cd and $\underline{\text{CdMg}}$ and $\underline{\text{CdHg}}$ alloys</i>	148
4.3.3	<i>Axial Knight shift</i>	153
4.4	μ^+ Knight shift in transition metals and alloys/compounds	154
4.4.1	<i>Group VB metals: V, Nb, Ta</i>	155
4.4.2	<i>Ni, Pd, Pt</i>	157
4.4.3	<i>Ce and $\text{Ce}_{1-x}\text{Th}_x$—valence transition study</i>	157
4.5	μ^+ Knight shift in semi-metals	161
4.6	Spontaneous hyperfine and dipole fields in ferromagnetic and antiferromagnetic materials	162
4.6.1	<i>Contributions to the local field at a μ^+: the dipole field</i>	162
4.6.2	<i>Metals and compounds</i>	166

5	Study of Dynamic Effects in Magnetism	
5.1	Dynamic effects and critical phenomena	182
5.1.1	<i>Spin fluctuations of itinerant electrons in MnSi</i>	182
5.2	Spin glasses	184
5.2.1	μ^+ relaxation function models in zero, longitudinal and transverse fields	184
5.2.2	Short review of μ SR results in <u>CuMn</u> , <u>AuFe</u> and <u>AgMn</u>	191
6	Applications in Superconductors	
6.1	Magnetic effects	203
6.2	μ^+ precession in mixed phase of type II superconductors	207
7	Muonium in Matter	
7.1	Magnetic properties in the 1S ground state	215
7.1.1	<i>Hyperfine structure and Zeeman splitting</i>	215
7.1.2	<i>Evolution of μ^+ polarisation in muonium ground state</i>	225
7.1.3	<i>Inclusion of electron relaxation and chemical lifetime</i>	230
7.1.4	<i>Transitions between muonium states with different hyperfine Hamiltonians</i>	237
7.1.5	<i>Superhyperfine interaction</i>	240
7.2	Muonium formation	245
7.3	Muonium in quartz and other insulators	251
7.3.1	<i>Longitudinal field studies</i>	252
7.3.2	<i>Transverse and zero field studies: hyperfine properties</i>	253
7.3.3	<i>Zero field studies: relaxation behaviour</i>	260
7.3.4	<i>Double electron muon magnetic resonance</i>	261
7.4	Muonium in Ge, Si and diamond	264
7.4.1	<i>Hyperfine properties of muonium states</i>	266
7.4.2	<i>Temperature and pressure dependence of hyperfine parameters</i>	271
7.4.3	<i>Determination of electronic g factor</i>	275
7.4.4	<i>Relaxation</i>	276
7.4.5	<i>Formation probabilities and transitions among different states</i>	281
7.4.6	<i>Nature of muonium states</i>	286
7.5	Surface interactions in oxide powders	291

8 Muon Spin Rotation in Insulators	
8.1 Introduction	300
8.2 $\alpha\text{Fe}_2\text{O}_3$ and Cr_2O_3	301
8.3 Orthoferrites	306
8.4 MnO and V_2O_3	310
8.5 MnF_2 and CoF_2	311
8.6 $\text{CoCl}_2 \cdot 2\text{H}_2\text{O}$	312
Index	317
