

Contents

1. Introduction	
By L. Schlapbach (With 2 Figures and 1 Table)	1
1.1 About the Topics of This Volume	1
1.2 Major Recent Developments and Outlook	4
1.3 Physical and Chemical Properties of Hydrogen; Safety Aspects	10
References	11
2. Surface Properties and Activation	
By L. Schlapbach (With 43 Figures)	15
2.1 Introduction	15
2.2 A Survey of Effects, Phenomena, and Models	17
2.2.1 Surface Structure	19
2.2.2 Thermodynamic Properties, Surface Segregation	21
2.2.3 Electronic Properties, Chemisorption Models	24
2.2.4 Dynamics of Hydrogen at Surfaces: Sticking, Vibration, Migration	33
2.2.5 Chemisorption on Metal Oxides	35
2.2.6 Effect of Thin Film Coating and Precoversion on H ₂ Dissociation and H Adsorption and Absorption	37
2.2.7 Activation of Intermetallic Compounds and Alloys as H Absorbers, Getters, and Catalysts	40
2.2.8 Deuterium Adsorption and Isotope Effects; Ortho–Para Conversion	46
2.3 Experimental Methods	49
2.4 Hydrogen on Elemental Metals	55
2.4.1 Hydrogen on Nickel	55
2.4.2 Hydrogen on Palladium	60
2.4.3 Hydrogen on Copper	65
2.4.4 Hydrogen on Rare-Earth Metals	66
2.4.5 Hydrogen on Mg, Al, and Ca	69
2.5 The Hydrogen-Related Surface Properties of Intermetallic Compounds and Alloys	71
2.5.1 General Remarks	71
2.5.2 LaNi ₅ and Related Compounds	72

2.5.3	FeTi and Related Compounds	76
2.5.4	AB ₂ Compounds	80
2.5.5	Mg-Based Alloys	81
2.5.6	Other Crystalline Alloys, Getters	82
2.5.7	Amorphous Alloys	83
2.5.8	Metallic Overlayers, Multilayers	84
	References	85
3.	Dynamics of Hydrogen in Intermetallic Hydrides	
By D. Richter, R. Hempelmann, and R.C. Bowman, Jr.		
(With 28 Figures and 8 Tables)		97
3.1	Survey	97
3.2	Methods	98
3.2.1	General Methods for Diffusion	98
3.2.2	Anelastic Relaxation	99
a)	The Snoek Effect	100
b)	The Gorsky Effect	101
3.2.3	NMR Studies of Diffusion	101
3.2.4	Quasielastic and Inelastic Neutron Scattering	106
a)	Quasielastic Neutron Scattering – H Diffusion	107
b)	Neutron Vibrational Spectroscopy	112
3.3	Experimental Results on Hydrogen Diffusion	116
3.3.1	General Overview – Long Range Diffusion	116
3.3.2	Diffusion in TiCr _y H _x	123
3.3.3	QNS Studies of Ti _{1.2} Mn _{1.8} H ₃	125
3.3.4	LaNi ₅ H ₆ – NMR and Neutron Scattering	131
3.3.5	Amorphous Metals	137
3.4	Hydrogen Vibrations	143
3.4.1	Overview	143
3.4.2	Hydrogen Potential	145
3.4.3	Hydrogen Site Determination	148
a)	Hydrogen in Intermetallic Compounds	148
b)	Hydrogen in Amorphous Metals	152
c)	Hydrogen at Metal Surfaces and in Metal Oxides	153
3.4.4	Hydrogen Occupancy	156
3.5	Conclusion and Outlook	157
	References	159
4.	Hydride Formation and Decomposition Kinetics	
By N. Gérard and S. Ono (With 12 Figures and 2 Tables)		165
4.1	Overview	165
4.2	Methods	167
4.2.1	General Kinetic Characteristics	167
4.2.2	Experimental Methods and Devices	169
a)	Volumetric Devices	169

b) Thermogravimetry	171
c) Other Methods	171
4.3 Results of LaNi₅ and Substituted Compounds of the Same Family	172
4.3.1 Kinetics in the Primary Solubility Range (α -Phase)	172
4.3.2 Kinetics in the Two-Phase Region (α - β)	173
a) Surface Activity	173
b) Heat Effect	173
c) Intrinsic Limiting Steps: Surface Reactions, Hydrogen Diffusion, and Phase Transitions, i.e. Nucleation and Growth	177
4.4 Results on Mg, Mg Alloys, and Mg Intermetallic Compounds	178
4.4.1 Formation/Decomposition Kinetics of MgH ₂ from Pure Mg	178
4.4.2 Magnesium Alloys and Intermetallic Compounds	181
4.5 Results on FeTi and Its Family	183
4.5.1 Activation of the Alloy	183
4.5.2 Kinetics of the Fully Activated FeTi	184
4.6 Results on AB₂ Laves Phase Alloys	189
4.7 Conclusion	192
References	193
 5. Applications	
By G. Sandrock, S. Suda, and L. Schlapbach (With 14 Figures and 9 Tables)	197
5.1 Historical Survey	197
5.2 Application-Related Properties	198
5.2.1 Pressure-Temperature Relations	198
5.2.2 Plateau Slope	200
5.2.3 Hysteresis	201
5.2.4 Hydrogen Capacity	201
5.2.5 Cost and Availability	202
5.2.6 Activation	202
5.2.7 Volume Change and Decrepitation	203
5.2.8 Heat of Reaction	203
5.2.9 Absorption/Desorption Kinetics	204
5.2.10 Heat Transfer (Effective Thermal Conductivity)	204
5.2.11 Effects of Gaseous Impurities	206
5.2.12 Cyclic Stability	208
5.2.13 Safety	209
5.3 Specific Applications	210
5.3.1 Hydrogen Storage	211
a) Stationary Storage Units	212
b) Fuel for Motor Vehicles	216
5.3.2 Purification and Separation	220

5.3.3	Isotope Separation	223
5.3.4	Hydrogen Getters	226
5.3.5	Hydrogen Compression	227
5.3.6	Heat Storage	228
5.3.7	Heat Pumps and Refrigerators	230
a)	Mechanically Driven	230
b)	Thermally Driven, Temperature-Upgrading	231
c)	Thermally Driven, Heat-Upgrading	233
d)	Thermally Driven, Refrigeration	234
e)	Experience with Prototypes	234
5.3.8	Heat Engines	237
5.3.9	Temperature Sensors and Actuators	237
5.3.10	Liquid H ₂ Applications	238
5.3.11	Catalysts	239
5.3.12	Batteries and Electrochemical Catalysts	240
5.3.13	Permanent Magnet Production	244
5.3.14	Other Applications	245
5.4	Concluding Remarks	246
	References	246

6. Experimental Techniques I: The Perturbed Angular Correlation Method and Its Application to Hydrogen in Metals

	By A. Weidinger (With 16 Figures and 2 Tables)	259
6.1	The PAC Method	259
6.1.1	Quadrupole Interaction in a Polycrystalline Sample	260
6.1.2	Quadrupole Interaction in a Single Crystal	262
6.1.3	Magnetic Interactions	263
6.2	Experimental Details	263
6.2.1	PAC Sources	263
6.2.2	PAC Setup	265
6.3	Applications to Metal-Hydrogen Phase Diagrams	267
6.3.1	Palladium Hydride	267
6.3.2	Tantalum and Niobium Hydrides	269
6.3.3	Zirconium and Hafnium Hydrides	270
6.3.4	Hydrides of Intermetallic Compounds	271
6.4	Hydrogen Trapping at Impurities	272
6.4.1	Hydrogen Trapping at Interstitial Impurities	272
6.4.2	Hydrogen Trapping at Substitutional Impurities	274
6.5	Hydrogen Diffusion	275
6.5.1	Quantum Diffusion at Low Temperatures	275
6.5.2	Diffusion in Metal Hydrides	278
6.6	List of PAC Experiments on Metal-Hydrogen Systems	282
6.7	Conclusion	282
	References	282

7. Experimental Techniques II: Adaptation of New Techniques to Study Surface and Bulk Properties of H–Metal Systems	
By M.H. Mintz, I. Jacob, and D. Shaltiel	
(With 11 Figures and 3 Tables)	285
7.1 Time-of-Flight Analysis of Direct Recoils	285
7.1.1 Detection of Surface Hydrogen	285
7.1.2 The TOF-DR Method: General Description	287
7.1.3 Adaptation of TOF-DR Measurements to the Study of Some Metal–Hydrogen Systems	290
7.1.4 Future Prospects	293
7.2 Nuclear Resonance Scattering of Gamma Rays	294
7.2.1 Bonding Strengths in Metal Hydrides	294
7.2.2 The Nuclear Resonance Scattering Method: Principles	294
7.2.3 Derivation of Debye Temperatures from the γ Resonance Scattering and Comparison with Other Techniques	298
7.2.4 Experimental Setup	298
7.2.5 Recent Applications of the Technique to Metal Hydrides	299
7.2.6 Possible Future Research	303
7.3 Thermal Desorption Spectroscopy	304
7.3.1 Methods of Investigation of Desorption Processes	304
7.3.2 General Description of the Experimental TDS Method	305
7.3.3 Theoretical Considerations of the TDS Method	306
7.3.4 Experimental Results and Analysis	308
7.3.5 Comparison Between Experiment and Theory	310
7.3.6 Possible Future Research	312
References	314
List of Tables	319
Subject Index	321
