PREFACE

v

Chapter 1. Crystals and Their Symmetry Properties	1
1-1. The Crystalline Nature of Solids	1
1-2. The Symmetry Operations of Crystals	3
1-3. Space Groups	6
1-4. The Crystal Systems and Bravais Lattices	10
1-5. Primitive Unit Cells for the Bravais Lattices	14
Chapter 2. Space Groups for Structures of the Elements	24
2-1. Survey of Crystal Structures of the Elements	24
2-2. The Body- and Face-centered Cubic Structures	27
2-3. The Hexagonal Close-packed Structure	32
2-4. The Diamond Structure	40
2-5. The Graphite Structure	44
2-6. The Arsenic Structure	45
2-7. The Selenium Structure	49
2-8. The Iodine Structure	50
Chapter 3. Space Groups for Structures of Compounds	54
3-1. General Survey of Crystal Structures	54
3-2. Structures of Simple Binary Compounds, RX	56
3-3. Structures of Some Compounds of Composition RX_2	62
3-4. Structures of Compounds in the Cubic System	68
3-5. The Calcite, Corundum, and Ilmenite Structures	77
3-6. Additional Trigonal, Hexagonal, and Orthorhombic Structures	85
Chapter 4. Atomic Radii and the Chemical Bond	95
4-1. Ionic and Atomic Radii	95

4-2. The Physical Significance of Atomic and Ionic Radii	101
4-3. Interaction of Negative Ions in Crystals	108
4-4. The Charge Distribution and Potential in a Crystal	111
4-5. Potentials for the Self-consistent Field in Crystals	115
Chapter 5. The Symmetry of Electronic Wave Functions in Crystals	118
5-1. The Reciprocal Lattice	118
5-2. Reciprocal Lattices and Brillouin Zones for Eight Bravais Lattices	121
5-3. The Effect of Rotational Operations on a Plane Wave	126
5-4. Stars of Wave Vectors	130
5-5. Symmetrized Plane Waves and Irreducible Representations	133
5-6. General Discussion of Symmetry of Wave Functions	140
Chapter 6. Plane-wave Expansions of Wave Functions in Crystals; The One-dimensional Case	144
6-1. Fourier Expansions of Periodic Functions	144
6-2. Periodic Boundary Conditions	146
6-3. Schrödinger's Equation for the Periodic-potential Problem	148
6-4. Momentum Eigenfunctions	151
6-5. The Wannier Functions	154
6-6. Energy Bands in the One-dimensional Case	158
Chapter 7. Plane-wave Expansion in the Two- and Three-dimensional Cases	167
7-1. The Two-dimensional Square Lattice	167
7-2. Symmetry Properties of the Wave Functions	174
7-3. Brillouin Zones	177
7-4. The Momentum Eigenfunctions for the Two-dimensional Case	182
7-5. Modified Momentum Eigenfunctions and Wannier Functions	187
7-6. The Relation of Brillouin Zones to Bragg's Law	195
7-7. The Three-dimensional Case, and the Plane-wave Expansion for Real Crystals	199
Chapter 8. The Tight-binding and Orthogonalized Plane-wave Methods	203
8-1. The General Idea of the LCAO and OPW Methods	203
8-2. Energy Bands of Sodium	206

8-3. Wave Functions and Momentum Eigenfunctions for Sodium	209
8-4. Matrix Elements for the LCAO and OPW Methods	218
8-5. Crystal Symmetry and the LCAO and OPW Methods	224
Chapter 9. The Cellular and Augmented-plane-wave Methods	228
9-1. The Wigner-Seitz and Cellular Methods	228
9-2. The Augmented-plane-wave Method	233
9-3. The Scattered-wave Method	236
9-4. The Free-electron Approximation and the Scattered-wave Method	241
9-5. Other Related Methods	246
Chapter 10. Calculations of Energy Bands in Crystals	250
10-1. The Free-electron Approximation	250
10-2. Free-electron Energy Bands in Crystals	253
10-3. Energy Bands of Typical Elements: Monovalent, Divalent, and Trivalent	257
10-4. Energy Bands of Tetravalent Elements and 3-5 Compounds	272
10-5. Energy Bands of Transition Elements	280
10-6. Energy Bands of Elements with Special Crystal Structures	287
10-7. Energy Bands for Alkali Halide Crystals and Other Compounds	291
10-8. Bibliography of Energy-band Calculations	300
Appendix 1. Interatomic Distances and Crystal Structures	307
Appendix 2. Crystal Parameters	334
Appendix 3. Symmetry Properties and Projection Operators for 20 Space Groups	347
A3-1. The Space Groups D_{6h}^4 ($P6_3/mmc$) and C_{6v}^4 ($P6_3mc$)	347
A3-2. The Space Groups O_h^5 ($Fm\bar{3}m$), O_h^7 ($Fd\bar{3}m$), and T_d^2 ($F\bar{4}3m$)	368
A3-3. The Space Groups O_h^9 ($Im\bar{3}m$), O_h^{10} ($Ia\bar{3}d$), and T_h^7 ($Ia\bar{3}$)	384
A3-4. The Space Groups O_h^7 ($Pm\bar{3}m$) and T_h^6 ($Pa\bar{3}$)	408
A3-5. The Space Groups C_{3i}^2 ($R\bar{3}$), D_3^7 ($R32$), D_{3d}^5 ($R\bar{3}m$), and D_{3d}^6 ($R\bar{3}c$)	417
A3-6. The Space Groups D_{3d}^{14} ($P\bar{3}m1$), and D_3^4 ($P3_121$)	426
A3-7. The Space Group D_{4h}^{14} ($P4_2/mnm$)	429
A3-8. The Space Group D_{2h}^{16} ($Pnma$)	438
A3-9. The Space Group D_{2h}^{18} ($Cmca$)	446

Appendix 4.	The Momentum Eigenfunction and Fourier Expansion of the Potential	452
Appendix 5.	Power-series Expansions of Energy Bands near Symmetry Points	455
Appendix 6.	Matrix Elements for the Augmented-plane-wave Method	461
Appendix 7.	The Free-electron Approximation	466
Appendix 8.	Binding Energy of Diamond, by Method of Schmid	470
Appendix 9.	Spin-Orbit and Relativistic Effects in Energy Bands	472
A9-1.	Spin-Orbit Effects in Atoms	472
A9-2.	Spin-Orbit Interaction in a Crystal Using the APW Method	478
A9-3.	Splitting of <i>P</i> -like State by Spin-Orbit Interaction	480
A9-4.	Double Groups and Their Applications	485
A9-5.	The Effect of a Rotation on the Spin Functions	490
A9-6.	Examples of Rotations of Coordinates	494
A9-7.	The Double Groups C_{Nv}	500
A9-8.	Cubic Double Groups	506
A9-9.	Basis Functions and Irreducible Representations for the Double Groups T_d and O_h	512
A9-10.	Double Point Groups and Double Space Groups	514
	BIBLIOGRAPHY	521
	INDEX	559
