

CONTENTS

PREFACE vii

Chapter 1. The Free-electron Theory of Electrical Conductivity	1
1-1. The Drude-Lorentz Theory of Metals	1
1-2. The Free Electrons	4
1-3. Shortcomings of the Drude-Lorentz Theory	6
1-4. Application of Fermi-Dirac Statistics to Metallic Electrons	8
1-5. Electron Scattering and Electrical Resistance	12
1-6. The Fermi Statistics and Metallic Conductivity	18
Chapter 2. Electrical Conductivity in Metals and Semiconductors	21
2-1. An Electron in a Periodic Potential and an External Field	21
2-2. The Acceleration of a Wave Packet in an Electric Field	24
2-3. Conductivity of Metals and Semimetals	30
2-4. The Hall Effect	36
2-5. The Behavior of Semiconductors	41
Chapter 3. Cyclotron Resonance and Related Phenomena	49
3-1. The Qualitative Nature of Cyclotron Resonance	49
3-2. Landau's Treatment of Free Electrons in a Magnetic Field	53
3-3. Free Electrons in a Magnetic Field in Cylindrical Coordinates	56
3-4. The Relation of Onsager's Theorem to the Quantum Condition	60
3-5. Onsager's Theorem for the Periodic Potential	62
3-6. The Cyclotron Frequency for Ellipsoidal Energy Surfaces	65
3-7. Cyclotron Resonance Frequency for the General Periodic Potential	69
3-8. Limitations and Extensions of the Method of Cyclotron Resonance	70

3-9. The de Haas-van Alphen Effect and Related Experiments	75
3-10. The Fermi Surface for Copper	78
3-11. Bibliography on Electronic Properties of Specific Materials	85
Chapter 4. The Drude-Lorentz and Ewald Theories of Insulating Crystals	95
4-1. The Optical-dispersion Theory of Drude and Lorentz	95
4-2. The Lorentz-Lorenz Correction	99
4-3. Ewald's Treatment of Polarization in a Dielectric Crystal	102
4-4. Calculations of Dispersion in Insulating Crystals	109
Chapter 5. The Drude-Lorentz Theory of the Optical Properties of Metals	113
5-1. Optical Properties of a Free-electron Metal	113
5-2. Plasma Oscillations	119
5-3. Later Developments in Plasma Oscillations	121
5-4. Bound Electrons in Metals	125
5-5. Bibliography on Optical Properties of Crystals	129
Chapter 6. The Theory of X-ray Diffraction	131
6-1. The Elementary Scattering Theory	131
6-2. The Atomic Scattering Factor and the Structure Factor	135
6-3. The Dynamical Theory of X-ray Diffraction	138
6-4. Laue's Treatment of the Dynamical Theory	142
6-5. X-ray Diffraction by a Sinusoidally Varying Index of Refraction	145
6-6. X-ray Scattering by Actual Crystals	150
Chapter 7. Effect of Thermal Vibrations of Crystals on X-ray Scattering	159
7-1. The Debye and Born-von Kármán Theories of Crystal Vibrations	159
7-2. The Thermal Vibrations of a Crystal	163
7-3. The Debye-Waller Factor in X-ray Scattering	166
7-4. The Temperature-diffuse, or Brillouin, Scattering of X-rays	172
7-5. The Bragg Conditions for Brillouin Scattering	174
7-6. Scattering of Electrons and Neutrons by Thermal Oscillations	179

Chapter 8. Lattice Vibrations of Metals and Insulators	181
8-1. Experimental Determination of Vibration Spectra	181
8-2. Results of Experimental Determinations of Lattice Spectra	184
8-3. The Interaction of Acoustic and Electromagnetic Waves in Crystals	187
8-4. Lattice and Electronic Polarization	193
8-5. The Nature of Ferroelectricity	198
8-6. Bibliography on Lattice Vibrations	203
Chapter 9. The Lattice Energy of Ionic Crystals	206
9-1. The Total Energy of Crystals	206
9-2. The Theory of Born, Landé, and Madelung	209
9-3. Electrostatic Energy and the Madelung Problem	211
9-4. Ewald's Method for Madelung's Problem	215
9-5. Lattice Theory and Crystal Vibrations	220
9-6. Quantum-mechanical Calculations for Ionic Crystals	226
Chapter 10. The Thomas-Fermi and Wigner-Seitz Methods, and the Cohesive Energy of Metals	233
10-1. The Thomas-Fermi Method and Its Application to Solids	233
10-2. The Exchange Correction in the Thomas-Fermi Method	238
10-3. Wigner and Seitz's Treatment of Exchange and Correlation	244
10-4. Löwdin's Treatment of Cohesion in Alkalies, and Alternant Molecular Orbitals	248
10-5. The Alternant Molecular-orbital Method and Antiferromagnetism	252
Chapter 11. The Crystal as a Many-body Problem	256
11-1. One-particle versus Many-particle Approach	256
11-2. One-electron Energies and Electronic Excitation	259
11-3. One-electron Energies in the Hartree-Fock Problem	262
11-4. Potential Function for One-electron Schrödinger Problem	265
11-5. Multiplet Structure in Solids	271
11-6. Various Forms of Many-electron Theory	275
11-7. Bibliography on Many-electron Theory	278
Appendix 1. The Motion of Wave Packets in a Periodic Potential	281
A1-1. The Average Velocity of a Wave Packet	281
A1-2. Acceleration of a Wave Packet in an External Applied Field	283

Appendix 2. Wave Functions of Impurity Atoms	292
A2-1. Introduction	292
A2-2. Statistical Treatment of Perturbed Periodic Lattices	296
A2-3. Difference-equation Method for Impurity Wave Functions	300
Appendix 3. Free Electrons in a Magnetic Field in Cylindrical Coordinates	308
Appendix 4. Ewald's Method for Crystalline Fields, Face-centered Cubic Lattice	310
Appendix 5. Polarization and Van der Waals Attraction	318
A5-1. Introduction	318
A5-2. The Perturbation Method for Polarizability	321
A5-3. Exact Value of Polarizability for Hydrogen	327
A5-4. Perturbation Method for Van der Waals Attraction in Hydrogen	331
A5-5. Variation Methods for Van der Waals Attraction in Hydrogen	334
A5-6. Van der Waals Attraction in Helium	338
A5-7. General Relations between Polarizability and Van der Waals Attraction	343
Appendix 6. The Virial Theorem for Solids	349
Bibliography	351
Book List	351
1. Papers through 1946	356
2. Papers since 1946	384
INDEX	543
