

CONTENTS

Preface to the Series	xi
------------------------------------	----

Foreword

I. M. Khalatnikov	xiii
-------------------------	------

Optical Self-Pumping

E. B. ALEKSANDROV and M. P. CHAIKA

1. <i>Introduction</i>	2
2. <i>Optical Self-Pumping of the Structural Components of the Ground-State Atoms</i>	4
2.1. <i>Self-Pumping in a Thallium Vapor Discharge</i>	4
2.2. <i>Early Observations of the Anomalous Ratio of the Intensities of the Hyperfine-Structure Components of the Resonance Emission Lines of Atoms</i>	4
2.3. <i>Current Investigation of the "Thallium Anomaly"</i>	6
2.4. <i>Self-Pumping Mechanism</i>	9
2.5. <i>The Reasons for the Occurrence of an Anomaly in the Resonance-Line Components</i>	11
2.6. <i>Self-Pumping in Emission Spectrum of Thallium</i>	16
2.7. <i>Self-Pumping in Rubidium and Silver Vapor</i>	18
2.8. <i>A Broader Conception of Self-Pumping. Self-Pumping under Natural Conditions</i>	24
3. <i>Self-Alignment of Atomic States in a Plasma</i>	25
3.1. <i>Quantum Alignment Model</i>	26
3.2. <i>Classical Model for the Alignment of Atoms</i>	29
3.3. <i>Detection of Alignment</i>	30
3.4. <i>Formalism for the Irreducible Tensor Operators</i>	32
3.5. <i>Radiation Capture and Alignment</i>	34

3.6.	<i>Alignment Distribution in a Plasma Occupying a Cylindrical Volume</i>	34
3.7	<i>Alignment in a Cylindrical Tube Filled with Neon in Which the Discharge Occurs</i>	38
3.8.	<i>The Role of Electron Collision in the Alignment in a Plasma</i>	41
3.9.	<i>Externally Induced Alignment and Self-Alignment</i> ...	42
3.10.	<i>Self-Alignment of Metastable States</i>	45
3.11.	<i>Alignment of Atoms in the Sun</i>	46
3.12.	<i>Latent Alignment</i>	47
3.13.	<i>Application of Alignment Signals</i>	52
3.14.	<i>Measurement of Magnet Fields in Solar Prominences</i>	55
4.	<i>Conclusion</i>	57

Magnetoelastic Interactions in Rare-Earth Paramagnets

LiLnF₄

Ş. A. AL'TSHULER, B. Z. MALKIN, M. A. TEPLOV, and
D. N. TERPILOVSKII

1.	<i>Introduction</i>	62
2.	<i>Thermodynamic Theory of Magnetoelastic Properties of Rare-Earth Paramagnets</i>	67
2.1.	<i>The Hamiltonian of the Rare-Earth Paramagnet</i>	67
2.2.	<i>Free Energy of the Rare-Earth Paramagnet and Calculation of the Magnetoelastic Effects</i>	72
2.3.	<i>The Structure and Dynamics of the LiLnF₄ Lattice. The Parameters of the Hamiltonian of the Rare-Earth Ions in LiLnF₄ Crystal</i>	84
3.	<i>Magnetostriction of LiLnF₄ Crystals</i>	95
3.1.	<i>Magnetostriction of the Paramagnetic Crystal LiErF₄¹⁹</i>	96
3.2.	<i>Magnetostriction of the Ising LiTbF₄ Ferromagnet</i>	105
3.3.	<i>Magnetostriction of the Van Vleck Paramagnet LiTmF₄</i>	119
4.	<i>Elastic Constants of LiLnF₄ Crystals</i>	126
4.1.	<i>Elastic Constants of the Paramagnetic Crystal LiTmF₄³⁷</i>	126

4.2.	<i>Elastic Constants of the Ferromagnetic Crystal</i> <i>LiTbF₄</i>	139
5.	<i>Magnetostrictive Effects in the Magnetic Resonance</i> <i>Spectra</i>	145
5.1.	<i>Nonlinear Magnetic Susceptibility of LiTmF₄</i> <i>Crystal</i>	146
5.2.	<i>The Magnetic Resonance of ¹⁶⁹Tm Nuclei</i>	150
5.3.	<i>The Magnetic Resonance of Yb³⁺ Impurity Ions</i> <i>in the LiTmF₄ Crystal</i>	152
6.	<i>Conclusion</i>	156

Magnetic Solitons: A New Type of Collective Excitation in Magnetically Ordered Crystals

A. M. KOSEVICH, B. A. IVANOV, and A. S. KOVALEV

1.	<i>Introduction</i>	162
2.	<i>Magnon Bound States and Localization of Spin</i> <i>Waves</i>	164
3.	<i>Dynamic Equations of the Magnetization Field and</i> <i>Integrals of Motion</i>	174
4.	<i>Two-Parameter Solitons in a One-Dimensional Ferro-</i> <i>magnet with an Easy-Axis Anisotropy</i>	182
5.	<i>Three-Dimensional Dynamic Solitons in a Uniaxial</i> <i>Ferromagnet</i>	196
6.	<i>Magnetic Solitons in a Ferromagnet with a Biaxial</i> <i>Anisotropy</i>	209
7.	<i>Specific Features of the Soliton States in a Ferro-</i> <i>magnet with an Easy-Plane Anisotropy</i>	220
8.	<i>Vortices in an Easy-Plane Ferromagnet</i>	232
9.	<i>Solitary Waves in an Antiferromagnet</i>	238
10.	<i>Topological Analysis of Localized Solitons</i>	245
11.	<i>The Structure of a Two-Dimensional Topological</i> <i>Soliton</i>	252
12.	<i>Conclusion</i>	256

Some Phenomena in Crystals Lacking an Inversion Center

G. A. SMOLENSKIĪ, N. N. KRAINIK, and S. N. POPOV

1.	<i>Introduction</i>	262
----	---------------------------	-----

2.	<i>Ferroelectrics with a Diffuse Phase Transition</i>	263
2.1.	<i>Introduction</i>	264
2.2.	<i>Dielectric Properties</i>	264
2.3.	<i>Optical, Electro-Optical, and Elasto-Optical Properties</i>	267
2.4.	<i>Photoinduced Piezoelectric Oscillations</i>	269
2.5.	<i>Mobility of the Charge Carriers and the Photoluminescence Near a Phase Transition</i>	271
2.6.	<i>Electrostriction</i>	272
2.7.	<i>Refraction of Light</i>	274
2.8.	<i>Integral Scattering of Light</i>	278
2.9.	<i>Raman Scattering of Light</i>	280
2.10.	<i>Mandel'shtam-Brillouin Scattering of Light</i>	283
2.11.	<i>The Effect of Ordering of Ions on the Temperature and Nature of the Phase Transition</i> ...	287
2.12.	<i>Mechanism by Which a Phase Transition Becomes Diffuse</i>	287
2.13.	<i>Conclusion</i>	289
3.	<i>Ferromagnets</i>	290
3.1.	<i>Introduction</i>	290
3.2.	<i>Magnetolectric Interactions</i>	299
3.3.	<i>Thermodynamic Theory</i>	304
3.4.	<i>Theory of the High-Frequency Properties of Ferroelectromagnets</i>	313
3.5.	<i>Experimental Studies of the Magnetolectric Interaction in Ferroelectromagnets</i>	320
3.6.	<i>Predicted Effects and Possible Applications</i>	331
3.7.	<i>Conclusion</i>	336
4.	<i>Electroacoustic Echoes</i>	337
4.1.	<i>Introduction</i>	337
4.2.	<i>Two-Pulse Echoes in Single Crystals</i>	342
4.3.	<i>Two-Pulse Echoes in Powders</i>	352
4.4.	<i>Three-Pulse Echoes</i>	366
4.5.	<i>Physical Properties of Memory</i>	376
4.6.	<i>Different Applications of the Electroacoustic Echoes</i>	385
4.7.	<i>Conclusion</i>	390

Intermediate State and the Dynamic and Static Properties of Domain Walls in Two-Sublattice Magnetic Materials

V. G. BAR'YAKHTAR and B. A. IVANOV

1. Introduction	404
2. Phase Diagram of a Uniaxial Antiferromagnet in an External Magnetic Field	409
3. The Magnetic Structure and Spin-Flop Transitions in Orthoferrites	422
4. Thermodynamic Theory of the Intermediate State of Magnetic Materials	426
5. Domain Walls and Domain Structure in the Intermediate State	432
6. The Landau-Lifshitz Equations and the Limiting Velocity of the Domain Walls in Ferromagnets	440
7. Effective Equations of the Magnetization Dynamics of a Weak Ferromagnet	449
8. Dynamics of Domain Walls in Orthoferrites	455
9. Nonlinear Oscillations of the Domain Walls in Orthoferrites	463
10. Magnetic Solitons and the Motion of Domain Walls in Orthoferrites near Phase Transitions	469
11. The Dynamics of Phase Boundaries in the Inter- mediate State of a Uniaxial Antiferromagnet	475
12. The Motion of Domain Walls in Ferrite	484
13. Cerenkov Radiation of Quasiparticles Produced as a Result of Domain Wall Motion	489
14. Acoustic Phonon Radiation and Phonon Drag Force	494
15. Effect of Phonon Radiation on the Forced Motion of a Domain Wall	499
16. Superlimiting Motion of Domain Walls	504
