

# CONTENTS

## 1. INTRODUCTION

1.1. Fundamental equations of linear elasticity	1
1.2. Transformation of stiffnesses and compliances	3
1.3. Effect of crystal symmetry on the stiffness and compliance arrays	5
1.4. Relationship between the stiffnesses and compliances	5
1.5. Use of cylindrical polar coordinates	10
1.6. Limitations on the elastic constants	10

## 2. FUNDAMENTAL EQUATIONS FOR INFINITE STRAIGHT DISLOCATIONS

2.1. Dislocations in elastic continua	13
2.2. The equilibrium equation method of solution	13
2.3. The compatibility equation method of solution	21
2.4. The energy of single dislocations	25
2.5. Derivation of relationships between certain of the stress field components	27
2.6. Interaction energy of parallel dislocations	29
2.7. Interaction between parallel dislocations	32
2.8. Effect of crystal symmetry on the energy factor	34
2.9. Expression for the angular derivative of the energy factor	35
2.10. The stability of dislocation segments	38

## 3. ANALYTIC SOLUTIONS IN CASES OF SYMMETRY

3.1. Dislocation along a diad axis with another diad perpendicular	40
3.2. Dislocation lying along a triad axis with a diad perpendicular to it	51
3.3. Dislocation with a diad axis perpendicular to it	64
3.4. Dislocation along a diad, triad, or tetrad axis	70
3.5. Comment on the roots	75

## 4. CUBIC SYSTEM: $a/2\langle\bar{1}10\rangle$ slip

4.1. Introduction	76
4.2. Dislocations in $\{110\}$ planes	78
4.3. Dislocations in $\{001\}$ planes with $a/2\langle110\rangle$ Burgers vector	94
4.4. The $\{1\bar{1}1\}a/2\langle110\rangle$ slip system	79
4.5. Contrast calculations for dislocations observed by high energy electron diffraction	142

<b>5. CUBIC MATERIALS: <math>a\langle 001 \rangle</math> slip</b>	
5.1. Introduction	147
5.2. $\{110\}a\langle 001 \rangle$ slip system	147
<b>6. CUBIC MATERIALS: <math>a/2\langle 111 \rangle</math> or <math>a\langle 111 \rangle</math> slip</b>	
6.1. $\{110\}a/2\langle \bar{1}11 \rangle$ or $a\langle \bar{1}11 \rangle$ slip	153
6.2. $\{211\}a/2\langle \bar{1}11 \rangle$ or $a\langle 111 \rangle$ slip	169
6.3. $\{312\}a/2\langle \bar{1}11 \rangle$ or $a\langle \bar{1}11 \rangle$ slip	80
<b>7. HEXAGONAL MATERIALS</b>	
7.1. Introduction	183
7.2. Basal slip $(0001)a/3\langle 1\bar{2}10 \rangle$	184
7.3. Non-basal slip	189
<b>8. CRYSTALS OF LOWER SYMMETRY</b>	
8.1. Introduction	201
8.2. Tetragonal crystals	201
8.3. Trigonal crystals	208
8.4. Orthorhombic crystals	216
<b>9. MORE COMPLICATED PROBLEMS</b>	
9.1. Introduction	223
9.2. Moving dislocations	223
9.3. Planar polygonal dislocation segments and loops	232
9.4. Planar curved dislocation segments and loops	238
9.5. Three-dimensional problems	239
9.6. Dislocations in the vicinity of planar surfaces	240
9.7. Dislocations in cylindrical crystals	242
9.8. Dislocation arrays	243
<b>APPENDIX A</b>	
Proof that the roots of the sextic equation are complex for stationary dislocations	245
<b>APPENDIX B</b>	
Cubic equations (Jahnke and Emde 1933)	246
<b>APPENDIX C</b>	
Tables of anisotropic parameters	249
<b>APPENDIX D</b>	
Tables of simple solutions	263
