

Contents

Preface	v
1. INTRODUCTION	1
1.1 Terminology and Definitions	1
1.2 Physical Adsorption (or Physisorption) and Chemisorption	3
1.3 Localized, Mobile and Immobile Adsorption	8
References	9
2. PREPARATION AND MAINTENANCE OF CLEAN METAL SURFACES	10
2.1 Introduction	10
2.2 Preparation of a Clean Surface	11
2.3 Surface Properties of Films, Filaments and Crystal Planes..	16
2.4 Ultra-high Vacuum Techniques	17
References	19
3. THE ADSORPTION PROCESS.. .. .	20
3.1 Condensation Coefficient	20
3.2 Sticking Probability	22
3.3 Adsorption Equilibrium	23
3.4 Surface Diffusion and Attainment of Equilibrium	24
4. RATES OF ADSORPTION, THERMAL ACCOMMODATION AND MOLECULAR BEAM SCATTERING	26
4.1 Rates of Adsorption	26
4.2 Experimental Determination of Rate Constants	27
4.3 Determination of the Sticking Probability	31
4.4 Magnitude of the Sticking Probability	34
4.5 Thermal Accommodation and Molecular Beam Scattering	43
References	53

5. DESORPTION PHENOMENA	55
5.1 Methods of Effecting Desorption	55
5.2 Thermal Desorption	56
5.3 Determination of Kinetic Order and Desorption Energy ..	57
5.4 Rates of Desorption for Variable Activation Energy of Desorption	71
5.5 Multiplet Adsorbed States	77
5.6 Electron-stimulated Desorption	81
5.7 Field Desorption	88
5.8 Photodesorption	90
References	90
6. ADSORPTION ISOTHERMS	93
6.1 Representation of Equilibrium Data	93
6.2 The Langmuir Model	93
6.3 Departures from the Langmuir Model	95
6.4 Isotherms for Variable Binding Energies	100
6.5 Criteria of Obedience to a Particular Equation	103
6.6 Additional Criteria	106
6.7 Interpretation of Isotherms	107
References	107
7. HEATS OF CHEMISORPTION	108
7.1 Calorimetry	108
7.2 Diathermic Calorimeters	109
7.3 Differential or Twin Calorimeters	113
7.4 Filament Calorimeters	114
7.5 Non-calorimetric Methods	115
7.6 General Considerations	117
7.7 Theoretical Calculations of Chemisorption Heats and Bond Energies	117
References	122
8. THERMODYNAMICS OF CHEMISORPTION	124
8.1 Isotheric Heat of Adsorption	124
8.2 Calorimetric Heats	126
8.3 Entropy of the Surface Phase	130
References	133
9. STATISTICAL THERMODYNAMICS OF ADSORPTION	134
9.1 The Ideal Localized Monolayer	134

9.2	Localized Monolayer with Interaction between Adsorbed Molecules	137
9.3	Localized Monolayer on a Non-uniform Surface with no Interactions	140
9.4	Mobile Layer	143
9.5	Mobile Layer with Interactions	145
	References	147
10.	ELECTRONIC THEORY OF METALS	148
10.1	Band Theory (Free-electron Model)	148
10.2	Bloch Functions	151
10.3	Linear Combination of Atomic Orbitals (LCAO)	151
10.4	Energy Bands	153
	References	156
11.	ELECTRONIC PROPERTIES OF METAL SURFACES	157
11.1	Bulk Lattice Model	157
11.2	Jellium Model	166
11.3	Pseudo-potential Model	168
11.4	Work Function	170
	References	174
12.	PERTURBATION OF SURFACE ELECTRONIC PROPERTIES BY CHEMISORPTION. I. THE WORK FUNCTION	175
12.1	Introduction	175
12.2	Work Function (or Surface Potential) of Absorbates	176
12.3	Theoretical Evaluation of the Change of Work Function by Foreign Metal Adatoms	184
	References	185
13.	PERTURBATION OF SURFACE ELECTRONICS PROPERTIES BY CHEMISORPTION. II. MAGNETIC SUSCEPTIBILITY	187
13.1	Introduction	187
13.2	Experimental Measurements	189
13.3	Application to Chemisorbed Layers	189
13.4	Bond Order	194
13.5	Appraisal of Results	194
	References	195

14. PERTURBATION OF SURFACE ELECTRONIC PROPERTIES BY CHEMISORPTION. III. ELECTRICAL CONDUCTIVITY	196
14.1 Introduction	196
14.2 Effect of Chemisorption	197
References	203
15. LOW-ENERGY ELECTRON DIFFRACTION (LEED) ..	204
15.1 Diffraction of Electron Waves	204
15.2 The LEED Diffractometer	206
15.3 Sharpness of Diffraction Spots	208
15.4 Analysis of Diffraction Patterns	209
15.5 Theoretical Models for Electron Scattering	211
15.6 Applications to Chemisorption	214
References	220
16. INFRA-RED SPECTROSCOPY OF CHEMISORBED MOLECULES	221
16.1 Spectra of Gaseous Molecules	221
16.2 Transmission Spectroscopy of Chemisorbed Molecules ..	223
16.3 Resolution and Intensity of Spectral Bands	229
16.4 Interpretation of Spectra	230
16.5 Reflectance Spectrometry	234
References	238
17. FIELD-EMISSION MICROSCOPY	240
17.1 Theory of Method	240
17.2 The Microscope	243
17.3 Applications to Chemisorption	246
17.4 Electron Resonance Tunnelling	249
17.5 Inelastic Tunnelling	254
References	255
18. FIELD-ION MICROSCOPY	257
18.1 General Principles	257
18.2 Applications to Chemisorption	259
References	260

19.	MOBILITY OF ADSPECIES	261
19.1	The Migration Process	261
19.2	Diffusion Coefficients and Migration Energies	262
19.3	Entropy of Mobile and Immobile Chemisorbed Layers	269
	References	269
20.	ELECTRON-IMPACT AUGER SPECTROSCOPY	270
20.1	Production of an Auger Electron	270
20.2	The Auger Spectrometer	272
20.3	Band Shape and Width of Spectral Bands	275
20.4	Auger Yield	275
20.5	Escape Depth	276
20.6	Binding Energy and Energy of Auger Spectral Peak	278
20.7	Applications to Chemisorption	281
	References	284
21.	X-RAY PHOTOELECTRON SPECTROSCOPY	286
21.1	General Principles	286
21.2	Applications to Chemisorption	288
	References	290
22.	ULTRA-VIOLET PHOTOELECTRON SPECTROSCOPY	291
22.1	General Principles	291
22.2	Escape Depth of Photo-emitted Electrons	293
22.3	Intensity of Spectral Peaks	293
22.4	Reference Energy Level	294
22.5	Relaxation Energy	296
22.6	Optical Density of States	297
22.7	Applications to Chemisorption	298
	References	307
23.	ION NEUTRALIZATION SPECTROSCOPY	309
23.1	General Principles	309
23.2	Conversion of Energy-analysis Plot to Local Density of States	311
23.3	Applications to Chemisorption	312
	References	314

24. ELECTRON ENERGY-LOSS SPECTROSCOPY	315
24.1 Origin of Spectral Loss Peaks	315
24.2 The Energy-loss Spectrometer	316
24.3 Applications to Chemisorption	317
24.4 Ionization Spectroscopy	320
References	320
25. APPEARANCE POTENTIAL SPECTROSCOPY	321
25.1 General Principles	321
25.2 The Appearance Potential Spectrometer	324
25.3 Derivation of the Density of States	325
25.4 Application to Metal Surfaces and Chemisorbed Overlayers		326
References	327
26. ELECTRONIC PROPERTIES OF ADSORBED LAYERS	328
26.1 Experimental Aspects of Electron Spectroscopic Investigations	328
26.2 Theoretical Approaches to Chemisorption	333
References	342
27. REVIEW OF SOME EXPERIMENTAL DATA	344
27.1 Progress towards the Ideal System	344
27.2 Experimental Approaches	345
27.3 Some Gas/tungsten Systems	348
27.4 Status of the Present Situation	333
References	354
Author Index	357
Subject Index	366
