1. Properties of Isolated Hydrogen Molecules

1.1	The Adiabatic Approximation	1
1.2	The Rotation-Vibration States	4
1.3	The Molecular Multipole Moments and Polarizabilities	10
1.4	The Dunham Model	20
1.5	Nuclear Symmetry Species for Homonuclear Molecules	23
	References	27

2. The Intermolecular Interaction

2.1	Definition of the Intermolecular Interactions	30
2.2	The Long-Range Intermolecular Interactions	36
2.3	The Short-Range Intermolecular Interactions	42
2.4	Models for the Pair Potential	45
	References	51

3. Pure Vibrational Excitations

3.1	The fcc and hcp Structures	53
3.2	Single-Molecule Perturbations	56
3.3	Vibrational Energy Bands	61
3.4	Localized Vibrational States	67
3.5	The Vibrational Raman Spectrum	75
	References	86

4. Rotational Excitations in $J = 0$ Solids

4.1	Crystal-Field Interactions	88
4.2	Pure Rotational Excitations	91
4.2.1	The $J = 2$ Band in an fcc Lattice	92
4.2.2	The $J = 2$ Band in an hcp Lattice	96
4.2.3	The Rotational Energy Bands in Solid HD	98
4.2.4	Multiple Rotational Excitations	102
4.3	Mixed Rotation-Vibration Excitations	105
4.3.1	The $S_1(0)$ and $Q_1(0) + S_0(0)$ Manifolds	106
4.3.2	The $S_1(0) + S_1(0)$ Manifold	111
4.4	Rotation Raman and Infrared Spectra	114
4.4.1	Theoretical Foundations	114
4.4.2	Pure Rotation Spectra	119
4.4.3	Mixed Rotation-Vibration Spectra	126
	References	128

5. Lattice Vibrations and Elastic Properties

5.1	Lattice Vibrations in the Harmonic Approximation	132
5.2	Lattice Vibrations in Quantum Crystals	138
5.2.1	Calculation of the Ground-State Energy	141
5.2.2	Nature of the Elementary Excitations	146
5.3	Elastic Properties and the Anisotropic Debye Model for the hcp Lattice	156
5.4	Two-Particle Distribution Functions and Correlation Matrices	163
	References	172

6. Single $J = 1$ Impurities in $J = 0$ Solids

6.1	Crystal-Field Interactions in a Rigid Lattice	174
6.2	Effect of Static Phonon Renormalization	177
6.3	Dynamic Crystal-Field Effects	181
6.4	Specific Heat and NMR Properties	189
	References	195

7. Clusters of $J = 1$ Impurities in $J = 0$ Solids

7.1	Models for Cluster Distributions	198
7.2	Properties of Isolated Clusters	201

7.3	Spectroscopy of nn Pairs of $J = 1$ Molecules	204
7.4	Finer Details of the nn Pair Interaction	211
7.5	Interactions between More Distant Neighbors	221
	References	223

8. The Ordered Phases

8.1	Orientational and Structural Phase Changes	226
8.2	The Four-Sublattice Structure of Pure $J = 1$ Solids	228
8.3	The Order-Disorder Transition in the fcc Solids	235
8.3.1	The Molecular-Field Approximation	236
8.3.2	Effect of Short-Range Correlations	239
8.4	Librons in Pure $J = 1$ Solids	241
8.5	$J = 0$ Impurities in $J = 1$ Solids	246
8.6	Ordering in $J = 0$ Solids at Ultrahigh Pressures	250
	References	253

9. Rotation Diffusion and Ortho-Para Conversion

9.1	Ortho-Para Conversion Processes	256
9.2	Rotation Diffusion at Small $J = 1$ Concentrations	259
9.2.1	Diffusion of Single $J = 1$ Impurities at Finite Concentrations	262
9.2.2	Diffusion of nn Pairs of $J = 1$ Impurities	268
9.3	Rotation Diffusion at Small $J = 0$ Concentrations	269
9.4	Experimental Results on Rotation Diffusion	272
	References	275
