CONTENTS OF OTHER VOLUMES	xii

INTRODUCTION

Chapter 1 Some Key Features of III-V Compounds

C. Hilsum

I. Introduction	3
II. Band Structure	4
III. Effective Masses	8
IV. Effective Charge	10
V. Transport Properties	15
VI. Future Progress	17

BAND STRUCTURE

Chapter 2 Methods of Band Calculations Applicable to III-V Compounds

Franco Bassani

I. Introduction	21
II. Classification of the Electronic States	23
III. Symmetry Functions and Matrix Elements	29
IV. Approaches to the Calculation of the Electronic States	46
V. Qualitative Features of the Band Structure and Preliminary Calculations	61
VI. Conclusions and Lines of Future Progress	73

Chapter 3 The $k \cdot p$ Method

E. O. Kane

I. Introduction	75
II. Scope of Present Paper	77
III. The $k \cdot p$ Representation	78
IV. Specific Diamond and Zinc Blende Symmetries	83
Appendix	99

Chapter 4 Effect of Heavy Doping on the Semiconductor Band Structure

V. L. Bonch-Bruевич

I. Introduction	101
II. Main Features of the Heavily Doped Semiconductors	102
III. Characteristics of the Many-Electron System	108
IV. Perturbation Theory	119
V. Semiclassical Approximation	128

Chapter 5 Energy Band Structures of Mixed Crystals of III-V Compounds

Donald Long

I. Introduction	143
II. Energy Gap versus Composition	147
III. Other Band Parameters versus Composition	155

MAGNETIC FIELD EFFECTS

Chapter 6 Magnetic Quantum Effects

Laura M. Roth and Petros N. Argyres

I. Introduction	159
II. Magnetic Susceptibility	169
III. Quantum Galvanomagnetic Effects	174

Chapter 7 Thermomagnetic Effects in the Quantum Region

S. M. Puri and T. H. Geballe

I. Introduction	203
II. Thermoelectric Power in High Magnetic Fields	209
III. Compound Semiconductors of III-V Group	232
IV. Oscillations Induced by Optical Phonons	255

Chapter 8 Band Characteristics near Principal Minima from Magnetoresistance

W. M. Becker

I. Introduction	265
II. Survey	272
III. Experimental Measurements	273
IV. Negative Magnetoresistance	284

Chapter 9 Freeze-Out Effects, Hot Electron Effects, and Submillimeter Photoconductivity in InSb

E. H. Putley

I. Freeze-Out Effects	289
II. Hot Electron Effects at Low Temperatures	299
III. Submillimeter Photoconductivity	305

Chapter 10 Magnetoresistance

H. Weiss

I. Introduction	315
II. Shape of Specimen and Electrodes	317
III. Inhomogeneities	324
IV. The Homogeneous Rodlike Semiconductor	340
V. Influence of Pressure	375

PLASMA EFFECTS**Chapter 11 Plasmas in Semiconductors and Semimetals***Betsy Ancker-Johnson*

I. Definitions	379
II. Plasma Oscillations	386
III. Magnetoreflexion and Absorption	395
IV. Wave Propagation	416
V. Pinch Effect	433
VI. Instabilities	455
VII. Conclusions	480
Notation	481
AUTHOR INDEX	483
SUBJECT INDEX	492
