

Contents

	Preface	ix
	List of abbreviations	xi
1	Introduction	1
1.1	Why surfaces?	1
1.2	Ultra-High-Vacuum (UHV), contamination and cleaning	4
1.3	Adsorption at surfaces	8
1.4	Surface analytical techniques	10
2	Surface crystallography and electron diffraction	14
2.1	Surface symmetry	14
2.2	Description of overlayer structures	17
2.3	Reciprocal net and electron diffraction	23
2.4	Electron diffraction – qualitative considerations	27
2.5	Domains, steps and defects	29
2.6	Surface structure determination using LEED	46
	2.6.1 General considerations and the failure of single scattering and Fourier transform methods	46
	2.6.2 Basic elements of multiple scattering theories	55
	2.6.3 Applications of multiple scattering calculations	62
2.7	Thermal effects	69
2.8	Reflection High Energy Electron Diffraction (RHEED)	71
	Further reading	75
3	Electron spectroscopies	76
3.1	General considerations	76
	3.1.1 Introduction	76
	3.1.2 Electron inelastic scattering and surface specificity	76
	3.1.3 Electron energy spectrometers	81
	3.1.3.1 Retarding field analyser (RFA)	82
	3.1.3.2 Electrostatic deflection analysers	86
	3.1.4 Electron energy distributions in electron spectroscopies	92
	3.1.5 Electron spectroscopies: core level spectroscopies	95
3.2	X-ray Photoelectron Spectroscopy (XPS)	96
	3.2.1 Introduction	96

3.2.2	Photon sources	97
3.2.3	Shapes and shifts	99
3.2.4	XPS as a core level spectroscopy	107
3.2.5	Synchrotron radiation studies	113
3.2.6	Structural effects in XPS	116
	3.2.6.1 Angle-resolved XPS	117
	3.2.6.2 Extended X-ray Absorption Fine Structure (EXAFS)	122
3.3	Auger Electron Spectroscopy (AES)	126
3.3.1	Introduction – basic processes	126
3.3.2	Energy levels, shifts and shapes	128
3.3.3	AES for surface composition analysis	138
3.3.4	AES versus XPS – some comparisons	149
3.4	Threshold techniques	150
3.4.1	Appearance Potential Spectroscopy (APS)	150
	3.4.1.1 Detection methods and relative merits	151
	3.4.1.2 Sensitivities, cross-sections and line shapes	154
3.4.2	Ionisation Loss Spectroscopy (ILS)	157
3.4.3	Structural effects in threshold spectroscopies	159
3.5	Ultraviolet Photoelectron Spectroscopy (UPS)	162
3.5.1	Introduction	162
3.5.2	UPS in the elucidation of band structure	164
3.5.3	UPS in the study of adsorbed molecules	179
	Further reading	194
4	Incident ion techniques	195
4.1	Introduction	195
4.2	Charge exchange between ions and surfaces	196
4.2.1	Ion Neutralisation Spectroscopy (INS)	199
4.2.2	INS with metastable intermediates	207
4.2.3	Experimental arrangements for INS	208
4.2.4	Experimental results from neutralisation at metal surfaces	212
4.2.5	Information from INS of metals	215
4.3	Ion scattering techniques	220
4.3.1	LEIS: basic principles	220
4.3.2	Structural effects in LEIS	232
4.3.3	Instrumentation, problems and prospects: LEIS	236
4.3.4	High Energy Ion Scattering (HEIS)	239

4.4	Sputtering and depth profiling	246
4.5	Secondary Ion Mass Spectrometry (SIMS)	262
	Further reading	277
5	Desorption spectroscopies	279
5.1	Introduction	279
5.2	Thermal desorption techniques	280
	5.2.1 Introduction	280
	5.2.2 Qualitative analysis of pressure–time curves	281
	5.2.3 Experimental arrangements for flash desorption and TPD	291
	5.2.4 Flash desorption and TPD spectra	295
5.3	Electronically stimulated desorption	299
	5.3.1 Basic mechanisms	299
	5.3.2 Instrumentation and measurements	310
	5.3.3 Some applications and results	319
	Further reading	324
6	High field techniques	325
6.1	Field emission	325
6.2	The field emission microscope	329
	6.2.1 Factors governing operation	331
	6.2.2 Practical microscope configurations	333
	6.2.3 Experimental results from Field Emission Microscopy (FEM)	335
6.3	Field ionisation	337
6.4	Field evaporation and desorption	346
6.5	The field ion microscope	348
6.6	The atom probe field ion microscope	353
	Further reading	355
7	Work function techniques	356
7.1	Introduction	356
7.2	Single crystal surfaces	356
7.3	Polycrystalline surfaces	358
7.4	Work function measurements based upon the diode method	361
7.5	Work function measurements based on CPD	368
7.6	Field emission measurements	372
7.7	Photoelectric measurements	375
7.8	Experimental results	375

8	Atomic and molecular beam scattering	379
8.1	Introduction	379
8.2	The beam–surface interaction	380
8.3	Inelastic scattering, the classical view	383
	8.3.1 Inelastic scattering, the quantum mechanical view	387
8.4	Elastic scattering	388
8.5	The production and use of molecular beams	391
8.6	Detectors	396
8.7	Experimental arrangements	397
8.8	Scattering studies	401
	Further reading	413
9	Vibrational spectroscopies	414
9.1	Introduction	414
9.2	IRAS	420
9.3	Electron energy loss spectroscopy	423
9.4	Experimental methods in IRAS	424
	9.4.1 Applications of IRAS	427
9.5	Experimental methods in HREELS	430
	9.5.1 Experimental results from HREELS	431
	Further reading	437
	References	438
	Index	447
