Preface	xxi
Foreword	xxvii
1 The neutron as an elementary particle	1
1.1 The nuclear atom	1
1.1.1 The classical era: Democritus to Mendeleev	1
1.1.2 The modern era: electrons and nuclei	2
1.2 The constituents of nuclei	5
1.2.1 The proton–electron nuclear model	5
1.2.2 The Pauli neutrino hypothesis	8
1.3 Discovery of the neutron	11
1.3.1 First evidence for the neutron	11
1.3.2 Chadwick's experiment: the proton–neutron nuclear model	12
1.4 Neutron capture	13
1.4.1 Artificial radioactivity	13
1.4.2 Neutron capture resonances	14
1.4.3 Nuclear fission	15
1.5 Mechanical properties of the neutron	15
1.5.1 Inertial mass	15
1.5.1.1 Mass spectrometry: exothermic and endothermic reactions	15
1.5.1.2 Neutron β -decay and other routes to the neutron mass	17
1.5.2 Gravitational mass	19
1.5.2.1 The principle of equivalence	19
1.5.2.2 Neutron gravity experiments	20
1.5.3 Neutron momentum analysis	22
1.5.3.1 Mechanical velocity selectors	22
1.5.3.2 Neutron choppers	23
1.5.3.3 Crystal monochromators	26

1.5.4 Spin and statistics	26
1.5.4.1 Neutron scattering in ortho- and para-hydrogen	26
1.5.4.2 Neutron magnetic dipole moment: the Stern–Gerlach experiment	28
1.6 Neutron sources	31
1.6.1 Natural and artificial neutron sources	31
1.6.2 Radioisotope sources	32
1.6.3 Photoneutron sources	33
1.6.4 Accelerator sources	33
1.6.5 The nuclear reactor	34
1.6.5.1 Fission chain reaction	34
1.6.5.2 Materials for neutron technology	35
1.6.5.3 Energy distribution of reactor neutrons	36
1.6.5.4 Pulsed reactors	38
1.6.6 Ultra-cold neutrons	38
1.6.7 Spallation sources	43
1.7 Neutron detection and measurement	44
1.7.1 Slow neutron detectors	44
1.7.1.1 The ‘ $1/v$ ’ law	44
1.7.1.2 Charged particle reactions	46
1.7.1.3 Neutron activation	48
1.7.1.4 Fission detectors	49
1.7.2 Fast neutron detectors	50
1.7.2.1 Fast neutron moderation	50
1.7.2.2 Recoil detectors	50
1.7.2.3 Charged particle reactions	51
2 Neutron scattering and two-particle interactions	52
2.1 Fundamental interactions of the neutron	52
2.1.1 Strong, weak and electromagnetic interactions	52
2.1.2 Strong interactions and potential scattering	53
2.1.3 Electromagnetic interactions	55
2.1.3.1 The quantized radiation field	55
2.1.3.2 Interaction of field and particle	58
2.2 Two-particle collisions	60
2.2.1 Laboratory and centre of mass reference frames	60
2.2.2 An integral equation for scattering	62

2.3 Scattering in a central potential	64
2.3.1 The Born approximation	64
2.3.2 Partial wave analysis	66
2.3.3 Elastic scattering of identical particles	70
2.4 Scattering parameters	71
2.4.1 The scattering cross-section	71
2.4.2 The optical theorem	72
2.4.3 Complex potentials	74
2.4.4 Dispersion relations	75
2.5 Scattering length and effective range	78
2.5.1 Scattering length	78
2.5.2 Effective range	82
2.5.3 Absorption at zero energy	83
2.5.4 Shadow scattering	83
2.5.5 The Fermi pseudo-potential	84
2.6 Discrete states of the scattering potential	85
2.6.1 Bound states	85
2.6.2 Virtual states	89
2.6.3 Resonances	91
2.6.3.1 Resonance reactions with slow neutrons	91
2.6.3.2 The Breit–Wigner formulae	93
2.6.3.3 The Kapur–Peierls formalism	96
2.6.4 Regge poles, trajectories and recurrences	99
2.7 The neutron–proton system	104
2.7.1 The deuteron	104
2.7.2 Neutron–proton scattering	107
2.7.3 Photodisintegration of the deuteron	109
2.7.4 Neutron–proton capture: detailed balance	113
3 Neutrons and nuclei	116
3.1 Nuclear stability and binding energy	116
3.1.1 Nuclei in nature	116
3.1.2 Nuclear binding energy	118

3.2 Nuclear sizes	122
3.2.1 Alpha scattering and decay	122
3.2.2 Mirror nuclei	124
3.2.3 Isotope shift	126
3.2.4 Muonic atoms	127
3.2.5 Electron scattering	128
3.2.6 Neutron scattering	130
3.3 Nuclear forces	132
3.3.1 Invariance principles	132
3.3.2 The nucleon–nucleon potential	138
3.3.2.1 Static potentials	138
3.3.2.2 Exchange forces	141
3.3.2.3 Momentum dependence: spin–orbit coupling	145
3.4 Nuclear isospin	149
3.4.1 Charge symmetry and independence	149
3.4.2 The isospin formalism	152
3.5 Pions	158
3.5.1 The Yukawa hypothesis	158
3.5.2 The one-pion exchange potential	160
4 Neutrons and nuclear structure	165
4.1 Models of the nucleus	165
4.1.1 Effective forces in the nucleus	165
4.1.2 Independent particle models	167
4.1.3 Motion of the mass centre	168
4.2 The nuclear shell model	169
4.2.1 Magic numbers and inverted spin–orbit coupling	169
4.2.2 Angular momentum coupling rules	172
4.3 Simple shell-model tests	175
4.3.1 Electromagnetic multipole moments	175
4.3.2 Nuclear isomerism	178

4.3.3 Nuclear β -decay	178
4.3.4 Deuteron stripping reactions	181
4.4 The extended shell model	183
4.4.1 The binding energy problem	183
4.4.2 Configuration mixing	187
4.5 Collective motion	189
4.5.1 Deformed nuclei	189
4.5.2 Pairing forces	198
4.5.3 Moments of inertia	203
4.5.4 High spin states	204
4.6 Collective motion and unitary symmetry	207
4.6.1 The Elliott model	207
4.6.2 The interacting boson model	211
4.7 Neutron reactions and nuclear structure	216
4.7.1 Phenomenology of neutron–nucleus reactions	216
4.7.2 Theory of neutron–nucleus reactions	218
4.7.2.1 The Wigner–Eisenbud formalism	218
4.7.2.2 Elastic scattering ignoring spin	221
4.7.2.3 The general R -matrix	224
4.7.3 Analysis of neutron resonance reactions	227
4.7.3.1 Experimental determination of resonance parameters	227
4.7.3.2 Resonance properties and nuclear structure	229
4.7.4 Compound nucleus and direct reactions	231
4.7.4.1 Statistical model of compound nucleus reactions	231
4.7.4.2 The optical model	234
4.7.4.3 The intermediate model	238
4.7.5 Photoneutron production	242
5 Neutrons and nuclear energy	247
5.1 Energetics of nuclear transformation and decay	247
5.1.1 The liquid drop model and the Weizsäcker mass formula	247
5.1.2 Deformed liquid drop models	250

5.1.3 Nuclear decay modes	252
5.1.3.1 Gamma and beta decay	252
5.1.3.2 Nucleon emission	253
5.1.3.3 Emission of light nuclei	255
5.2 Nuclear fission	255
5.2.1 Neutron induced fission	255
5.2.2 Characteristics of the fission process	256
5.2.3 The Bohr–Wheeler theory of fission	260
5.2.4 The double-humped fission barrier	263
5.2.5 Transuranic and superheavy elements	265
5.3 Neutron transport and diffusion	268
5.3.1 The one-speed Boltzmann linear transport equation	268
5.3.1.1 Basic assumptions of transport theory	268
5.3.1.2 The continuity relation	269
5.3.1.3 Solution for a purely absorbing medium	272
5.3.1.4 Integral equations in a scattering medium	274
5.3.2 Neutron diffusion	276
5.3.2.1 Fick's law of diffusion	276
5.3.2.2 Diffusion in a uniform infinite medium	278
5.3.2.3 Time-dependent diffusion in anisotropic conditions	283
5.3.2.4 Boundary conditions at a plane surface: Milne's problem	287
5.4 Neutron moderation	291
5.4.1 Kinematics of elastic s-wave scattering	291
5.4.2 Neutron energy distribution in the steady state	293
5.4.2.1 An integral equation for the collision density	293
5.4.2.2 The slowing-down density	296
5.4.3 Collision density in the asymptotic regime	297
5.4.3.1 Solution without capture	297
5.4.3.2 Solution with capture	299
5.4.4 Spatial distribution of slowing-down density	302
5.4.4.1 The Fermi age	302
5.4.4.2 Derivation of the age equation with capture	305
5.5 The nuclear fission chain reactor	309
5.5.1 Milestones in nuclear reactor development	309
5.5.2 The neutron economy in a thermal reactor	311

5.5.3 Elementary theory of the homogenous cylindrical reactor	316
5.5.3.1 The moderator	316
5.5.3.2 The criticality condition	318
5.5.3.3 Reactor control	323
5.5.4 The Oklo phenomenon	324
5.6 Controlled nuclear fusion	326
5.6.1 Laboratory fusion reactions	326
5.6.2 Characteristics of a self-sustaining fusion device	327
5.6.2.1 Estimates of fusion power density	327
5.6.2.2 The ignition temperature T_c	329
5.6.2.3 The Lawson criterion for thermonuclear power production	331
5.6.3 Confinement of hot plasmas	333
5.6.3.1 Magnetic confinement	333
5.6.3.2 Inertial confinement	336
5.6.4 Design model for a d–t fusion reactor	337
5.6.5 Muon catalysed fusion	340
6 Foundations of neutron optics	343
6.1 Wave–particle duality	343
6.1.1 Matter waves	343
6.1.2 Wave optics	344
6.1.3 Wave mechanics	348
6.1.4 Interpretation of the wave function	351
6.1.5 The Dirac formalism	352
6.2 The eikonal approximation for neutrons	354
6.2.1 Phase integral solutions	354
6.2.2 Wave packets	357
6.2.3 Coherent states	362
6.3 Neutron propagation in condensed media	364
6.3.1 Dispersion	364
6.3.1.1 Refractive index	364
6.3.1.2 The influence of nuclear spin	367
6.3.1.3 Magnetic birefringence	369
6.3.1.4 The effect of chemical binding	374

6.3.2 The extinction theorem	375
6.3.3 Reflection and refraction	378
6.3.3.1 ‘Fresnel’ equations	378
6.3.3.2 Total external reflection	380
6.3.3.3 Refraction	382
6.4 Phase relations and superposition of states	383
6.4.1 Coherence	383
6.4.2 Mixed states in quantum mechanics	384
6.4.3 The density operator	385
6.4.4 Time dependence of the density operator	388
6.4.4.1 The quantum Liouville equation	388
6.4.4.2 Wave packet ensembles	389
6.4.4.3 The equilibrium state	391
6.4.5 Berry’s phase	392
6.4.5.1 Dynamical and topological phases	392
6.4.5.2 Observation of Berry’s phase using polarized light	395
6.4.5.3 Observation of Berry’s phase using polarized neutrons	396
7 Wave phenomena with neutrons	399
7.1 The Huygens–Fresnel principle for neutrons	399
7.1.1 Huygens’ principle	399
7.1.2 Fresnel’s theory of diffraction	401
7.1.3 The Helmholtz–Kirchhoff integral theorem	402
7.1.4 Diffraction by an opaque circular disc in the geometric limit	407
7.2 Neutron diffraction	410
7.2.1 Fraunhofer and Fresnel diffraction	410
7.2.1.1 Fraunhofer diffraction	410
7.2.1.2 Fresnel diffraction	413
7.2.2 Macroscopic diffraction	416
7.2.3 Bragg diffraction	418
7.2.4 Dynamical diffraction theory	424
7.2.4.1 Structure factor and lattice sum	424
7.2.4.2 Neutron propagation in perfect crystals	426
7.2.4.3 The Börmann effect	429
7.2.4.4 Pendellösung interference	431

7.3 Neutron interference	433
7.3.1 Interferometric measures of coherence	433
7.3.1.1 Temporal coherence	433
7.3.1.2 Spatial coherence	436
7.3.1.3 A gravitational rainbow	437
7.3.2 The mutual coherence function	438
7.3.3 Neutron interferometry	441
7.3.3.1 The perfect crystal neutron interferometer	441
7.3.3.2 Applications of neutron interferometry	443
7.4 Neutron polarization	445
7.4.1 The representation of neutron polarization	445
7.4.1.1 The Stokes parameters	445
7.4.1.2 Transfer matrices	447
7.4.2 Spin rotators and spin flippers	450
7.4.3 Production and analysis of polarized neutron beams	452
7.4.4 Schwinger scattering	453
7.4.5 Interaction of polarized neutrons with polarized nuclei	457
7.4.5.1 Nuclear orientation	457
7.4.5.2 Scattering of polarized neutrons by polarized nuclei	460
7.4.5.3 Capture of polarized neutrons on polarized nuclei	461
7.5 Neutron spin resonance	463
7.5.1 Nuclear magnetic resonance with neutrons	463
7.5.2 The Rabi single-coil resonance method	464
7.5.2.1 Determination of the resonance condition	464
7.5.2.2 The Bloch–Siegert shift	469
7.5.3 The Ramsey separated oscillatory fields method	471
7.5.4 Dressed neutrons	474
8 The neutron and condensed states of matter	479
8.1 Applied neutron optics	479
8.1.1 Neutron radiography	479
8.1.1.1 Radiography with X-rays and neutrons	479
8.1.1.2 Neutron beam characteristics	480
8.1.1.3 Neutron image detectors	482
8.1.2 Neutron reflectometry	484
8.1.3 Neutron topography	486
8.1.3.1 Neutron diffraction topography	486
8.1.3.2 Neutron phase topography	489

8.2 Neutron scattering in condensed systems	490
8.2.1 The neutron in condensed matter research	490
8.2.2 Neutron scattering in the interaction representation	494
8.2.3 The fluctuation-dissipation theorem	496
8.2.4 Neutron scattering cross-sections	501
8.2.5 Scattering by a monatomic perfect gas	505
8.3 The Van Hove theory of space-time correlations	506
8.3.1 The intermediate scattering function	506
8.3.2 The detailed balance condition	508
8.3.3 The frequency sum rule	509
8.3.4 The space-time correlation functions	510
8.3.5 Neutron scattering in harmonic crystals	515
8.3.5.1 Crystal dynamics	515
8.3.5.2 Determination of the scattering law	518
8.3.6 Small angle neutron scattering	522
8.4 Neutron scattering in magnetic media	527
8.4.1 The neutron as a probe of magnetic structure	527
8.4.1.1 The neutron-electron magnetic interaction	527
8.4.1.2 Paramagnetism and ferromagnetism	528
8.4.1.3 Antiferromagnetism	530
8.4.1.4 Ferrimagnetism	532
8.4.2 The magnetic scattering amplitude	533
8.4.3 Paramagnetic and ferromagnetic atoms	539
8.4.4 Spin waves	541
8.4.5 Polarized neutron scattering	546
8.4.5.1 Spin-flip and non-spin-flip scattering	546
8.4.5.2 Bragg scattering from ferromagnetic crystals	549
8.5 Neutron scattering instrumentation	551
8.5.1 Conventional diffractometry	551
8.5.1.1 The double-axis diffractometer	551
8.5.1.2 The single-crystal diffractometer	553
8.5.1.3 The powder diffractometer	555
8.5.1.4 The small-angle diffractometer	556
8.5.2 Inelastic scattering	558
8.5.2.1 The triple-axis spectrometer	558
8.5.2.2 The time-of-flight spectrometer	561
8.5.2.3 The beryllium filter spectrometer	564

8.5.3 Quasi-elastic scattering	565
8.5.3.1 The back-scattering spectrometer	565
8.5.3.2 The neutron spin-echo spectrometer	567
9 The neutron as a composite system	572
9.1 Strong interactions and SU(3) flavour symmetry	572
9.1.1 Nucleon sizes	572
9.1.2 Hadron spectroscopy	574
9.1.2.1 Excited states of the nucleon	574
9.1.2.2 Baryons and mesons	575
9.1.3 Quarks	579
9.1.3.1 The quark model of Zweig and Gell-Mann	579
9.1.3.2 Coloured quarks	581
9.2 Electromagnetic interactions	583
9.2.1 Dirac equation for a spin $\frac{1}{2}$ fermion	583
9.2.1.1 The free particle Dirac equation	583
9.2.1.2 Particle in an electromagnetic field	584
9.2.1.3 Gauge invariance and charge conservation	586
9.2.1.4 The non-relativistic limit	587
9.2.2 Induced electromagnetic effects	588
9.2.2.1 The Pauli magnetic moments	588
9.2.2.2 The Foldy potential	589
9.2.2.3 Electric dipole moment	590
9.2.3 Electromagnetic form factors	590
9.2.3.1 Electron–nucleon scattering	590
9.2.3.2 Neutron–electron scattering	595
9.2.4 Electromagnetic structure of the nucleon	597
9.2.4.1 Deep inelastic scattering	597
9.2.4.2 Parton model of the nucleon	599
9.2.4.3 Quarks and gluons in the nucleon	600
9.2.4.4 Anomalous effects	603
9.2.5 Electromagnetic moments of the neutron	604
9.2.5.1 Electric charge	604
9.2.5.2 Magnetic monopole moment	605
9.2.5.3 Magnetic dipole moment	607
9.2.5.4 Electric dipole moment	608
9.2.6 Electric and magnetic polarizabilities	611

9.3 Weak interactions	613
9.3.1 The current–current weak interaction	613
9.3.2 Transition amplitudes for neutron β -decay	615
9.3.3 The conserved vector current (cvc) theory	617
9.3.4 First- and second-class currents	618
9.3.5 The Goldberger–Treiman relation	619
9.3.6 Cabibbo theory and weak neutral currents	621
9.3.6.1 SU(3) symmetry of weak hadronic currents	621
9.3.6.2 Weak neutral currents	623
9.3.6.3 The Cabibbo–Kobayashi–Maskawa matrix	625
9.3.7 Experimental determination of the neutron lifetime	627
9.3.7.1 Measurement techniques	627
9.3.7.2 Neutron lifetime experiments in a neutron beam	629
9.3.7.3 Neutron lifetime experiment in a magnetic bottle	632
9.3.7.4 Neutron lifetime experiments in material bottles	634
9.3.8 Experimental determination of the angular polarization correlation coefficients in neutron decay	636
9.3.8.1 The electron–neutrino angular correlation coefficient ‘ a ’	636
9.3.8.2 The angular-polarization coefficients A and B	638
9.3.8.3 Weak magnetism	642
9.3.8.4 The triple angular-polarization correlation coefficient D	643
9.3.9 Status of neutron decay data	646
10 Fundamental processes and the role of the neutron	648
10.1 Parity violation in the nucleus	648
10.1.1 The weak interaction between nucleons	648
10.1.2 Parity violation in radiative neutron capture and fission	650
10.1.3 Parity violation in the neutron–proton system	651
10.1.4 Coherent parity violation	655
10.2 Gauge theories of quarks and leptons	658
10.2.1 Electro-weak unification	658
10.2.2 Strong interactions and quantum chromodynamics (QCD)	662
10.3 Quark models of the nucleon	666
10.3.1 SU(6) (spin-flavour) symmetry	666

10.3.2 The simple harmonic oscillator model	667
10.3.3 The MIT ‘bag’ model	669
10.3.4 The chiral bag model	670
10.4 Neutron physics beyond the standard model	671
10.4.1 Right-handed weak currents and neutron decay	671
10.4.2 <i>CP</i> violation	672
10.4.3 Baryon number non-conservation and neutron oscillations	675
10.4.3.1 Baryon number conservation	675
10.4.3.2 $n-\bar{n}$ oscillations and grand unification	677
10.4.3.3 Detection of neutron oscillations	680
10.5 The neutron in astrophysics and cosmology	684
10.5.1 Origin of the chemical elements	684
10.5.2 Light element nucleosynthesis	685
10.5.3 Primordial helium synthesis and the number of light neutrino species	688
10.5.4 The solar neutrino problem	690
10.5.5 Supernova core collapse	692
10.5.6 Neutron stars	694
10.5.7 Heavy element nucleosynthesis	696
References	699
