1. <i>Development of Photoemission as a Tool for Surface Science: 1900-1980</i> By W.E. Spicer (With 4 Figures)	1
1.1 Introduction	1
1.2 The Einstein Era: 1900-1930	5
1.3 The Period of Misguided Quantum Mechanics: 1930-1945	8
1.4 The Development of the Correct Fundamental Understanding of the Photoemission Process: 1945-1960	10
1.5 The Development of Photoemission Spectroscopy: 1960-1970	12
1.6 The Explosive Era in Which Photoemission Spectroscopy Was Successfully Applied to the Study of Surfaces: 1970-1980	15
1.7 Conclusions	15
References	16
2. <i>Auger Spectroscopy as a Probe of Valence Bonds and Bands</i> By D.E. Ramaker (With 19 Figures)	19
2.1 Introduction	19
2.2 Lineshape Description - One-Electron Model	22
2.2.1 Atomic Auger Matrix Elements	24
2.2.2 Local or Mulliken Populations	26
2.3 Localization	28
2.4 Screening	34
2.5 Outlook	39
2.5.1 ESD/PSD	39
2.5.2 AES in the Gas Phase and Chemisorbed Systems	41
2.5.3 AES in the Bulk and at Interfaces	45
2.6 Summary	46
References	46
3. <i>SIMS of Reactive Surfaces</i> By W.N. Delgass, L.L. Lauderback, and D.G. Taylor (With 16 Figures)	51
3.1 Introduction	51
3.2 Single Crystal Metal Surfaces	52
3.2.1 Characteristics of SIMS	52
3.2.2 CO and O ₂ on Ru{001}	55
3.2.3 Classical Dynamics Modelling	60
3.2.4 Structure from Angle Dependence	62
3.2.5 Reactive Intermediates	64
3.3 Molecular SIMS	66
3.3.1 SIMS of Molecular Solids	66
3.3.2 Thiophene on Silver	68
3.3.3 Inorganic Complexes	69

3.4 Complex Surfaces	69
3.4.1 Proximity	69
3.4.2 Prospects for Catalysis	71
3.5 Conclusions	73
References	74
4. <i>Chemisorption Investigated by Ellipsometry</i> By G.A. Bootsma, L.J. Hanekamp, and O.L.J. Gijzeman (With 18 Figures)	77
4.1 Introduction	77
4.2 Principles of Ellipsometry	78
4.3 (Sub)Monolayer Models	82
4.4 Clean Metal Surfaces	86
4.5 Spectroscopic Ellipsometry of Overlayers	90
4.6 Kinetic Studies of Chemisorption	95
4.6.1 Coverage Calibration	95
4.6.2 Initial Stages of Oxidation	97
4.6.3 Reactions of Adsorbed Oxygen	101
References	104
5. <i>The Implications for Surface Science of Doppler-Shift Laser Fluorescence Spectroscopy</i> By D.M. Gruen, A.R. Krauss, M.J. Pellin, and R.B. Wright (With 11 Figures)	107
5.1 Introduction	107
5.2 Charge Transfer Processes at Surfaces	109
5.3 Laser Fluorescence Spectroscopic Measurements of Fluxes and Energy Distributions of Sputtered Particles	113
References	121
6. <i>Analytical Electron Microscopy in Surface Science</i> By J.A. Venables (With 9 Figures)	123
6.1 Introduction	123
6.2 Analytical Electron Microscopy Techniques	125
6.3 Scanning Electron Microscopy of Surfaces	127
6.4 Surface Spectroscopies and Microscopy	132
6.4.1 Auger Electron Spectroscopy and Microscopy	132
6.4.2 Secondary Electron Spectroscopy and Work Function Imaging	135
6.4.3 Photoemission and Energy-Loss Spectroscopy	136
6.5 Diffraction Techniques and Microscopy	138
6.5.1 Transmission Electron Diffraction and Microscopy	138
6.5.2 RHEED and Reflection Microscopy	140
6.5.3 LEED and Low-Energy Microscopy	142
References	143
7. <i>He Diffraction as a Probe of Semiconductor Surface Structures</i> By M.J. Cardillo (With 15 Figures)	149
7.1 Introduction	149
7.2 Si{100}: Disordered Dimer Array	151
7.2.1 Si{100} Periodicity	151
7.2.2 Diffraction Scans and Qualitative Features of the Si{100} Surface	154
7.2.3 Specular Intensities	156
7.2.4 Structural Models for Si{100}	157

7.3	GaAs {110}	158
7.3.1	Diffraction Scans	159
7.3.2	Specular Intensity Scans	160
7.3.3	Rigorous Calculation of Diffraction Intensities	162
7.3.4	The Original of the He/GaAs Potential	163
7.3.5	Computation of Rarified Charge Densities	164
7.3.6	Summary	165
7.4	Si(111) (7×7)	165
7.4.1	Diffraction Scans	166
7.4.2	Specular Intensity Interference	166
7.4.3	A Model of the Si(111) (7×7)	169
7.4.4	Summary	171
	References	172
8.	<i>Studies of Adsorption at Well-Ordered Electrode Surfaces Using Low-Energy Electron Diffraction</i> By P.N. Ross, Jr. (With 19 Figures)	173
8.1	Introduction	173
8.2	Thermodynamics of Electrodeposition	174
8.3	Experimental Methods	177
8.4	Underpotential States of Hydrogen on Pt	180
8.4.1	Isotherms for Hydrogen on {111} and {100} Pt	181
8.4.2	Hydrogen at Stepped Surfaces	185
8.5	Underpotential States of Oxygen on Pt	188
8.6	Underpotential States of Metals on Metals	191
8.7	Relation of the Underpotential State to the Chemisorbed State in Vacuum	194
	References	200
9.	<i>Low-Energy Electron Diffraction Studies of Physically Adsorbed Films</i> By S.C. Fain, Jr. (With 7 Figures)	203
9.1	Introduction	203
9.2	Background	203
9.3	LEED Instrument	205
9.4	Krypton on Graphite	207
9.5	Argon on Graphite	210
9.5.1	Rotational Epitaxy of an Incommensurate Monolayer	210
9.5.2	Thermodynamics of an Incommensurate Monolayer	212
9.5.3	Overlayer-Substrate Spacing for an Incommensurate Monolayer	214
9.6	Nitrogen on Graphite	214
9.7	Conclusions	215
	References	216
10.	<i>Monte Carlo Simulations of Chemisorbed Overlayers</i> By L.D. Roelofs (With 15 Figures)	219
10.1	Introduction	219
10.2	Motivation for Monte Carlo Simulation of Surface Systems	220
10.2.1	Introduction to the Monte Carlo Method	221
10.2.2	Results Obtainable via Monte Carlo	223
10.2.3	Comparison to Other Methods for Treating Statistical Systems	225
10.3	Monte Carlo Methods for Lattice Gases	227
10.3.1	Simulation Mode	228
10.3.2	Microscopic Dynamics	229
10.3.3	Order of Transitions	230

10.4	Monte Carlo Simulation Results	232
10.4.1	Square Lattice Simulations	232
10.4.2	Rectangular Lattice Simulations	235
10.4.3	Triangular Lattice Simulations	237
10.4.4	Hexagonal Lattice Simulations	239
10.5	Summary and Discussion	246
	References	247
11.	<i>Critical Phenomena of Chemisorbed Overlayers</i>	
	By T.L. Einstein (With 8 Figures)	251
11.1	Introduction	251
11.2	Important Concepts	252
11.2.1	Lattice Gas Model	252
11.2.2	Critical Exponents and Scaling Laws	254
11.2.3	Corrections to Scaling	255
11.2.4	Crossover Phenomena [11.22]	256
11.2.5	Fisher Renormalization	258
11.3	Universality Classes for Atoms on a 2-d Lattice	259
11.3.1	Order Parameters	259
11.3.2	Universality Classes	259
11.3.3	Landau Theory for Adlayers	260
11.3.4	Catalogue of Transitions	262
11.3.5	Percolation	266
11.4	LEED on Single Crystal Faces	266
11.4.1	Measurement of Exponents	266
11.4.2	Surface Defects	269
11.5	Case Study: O/Ni(111)	270
11.6	Conclusions and Exhortations	276
	References	278
12.	<i>Structural Defects in Surfaces and Overlayers</i>	
	By M.G. Lagally (With 23 Figures)	281
12.1	Introduction	281
12.2	The Effect of Defects on the Intensity Distribution in Reciprocal Space	283
12.3	Surface Defect Studies Using Low-Energy Electron Diffraction	299
12.4	Surface Defect Studies by Alternative Diffraction Techniques	309
12.5	Summary	311
	References	311
13.	<i>Some Theoretical Aspects of Metal Clusters, Surfaces, and Chemisorption</i>	
	By R.P. Messmer (With 10 Figures)	315
13.1	Intrinsic Properties of Metal Clusters	315
13.1.1	Cluster Density of States	317
13.1.2	Cluster Magnetism	321
13.2	The Interaction of CO with Cu Clusters	323
13.2.1	Cu ₂ CO Calculations	329
13.2.2	Discussion of Core Level Spectra	335
	References	339
14.	<i>The Inelastic Scattering of Low-Energy Electrons by Surface Excitations; Basic Mechanisms</i>	
	By D.L. Mills, and S.Y. Tong (With 5 Figures)	341
14.1	Introduction	341
14.2	Small-Angle Dipole Scattering	345

14.3 Inelastic Electron Scattering from Surfaces with Large Deflection Angles; The Scattering by Dipole-Inactive Surface Vibrations	354
References	362
15. <i>Electronic Aspects of Adsorption Rates</i>	
By O. Gunnarsson, and K. Schönhammer (With 8 Figures)	363
15.1 Introduction	363
15.2 The Energy Distribution Function	366
15.3 Derivation of a Boson Formalism	372
15.4 General Features of the Energy Distribution Function	376
15.5 Stochastic Description of the Sticking Process	380
15.6 Quantum-Mechanical Treatment of the Adsorbate Motion	382
15.7 Summary	386
Appendix A	387
References	388
16. <i>Thermal Desorption</i>	
By D. Menzel (With 9 Figures)	389
16.1 Introduction	389
16.2 Critical Examination of the Usual Procedures	389
16.2.1 Short Description	389
16.2.2 Critique	391
16.3 Experimental Difficulties and Advances	396
16.4 Some Results and Discussion	401
16.5 Conclusions	405
References	405
17. <i>Field Desorption and Photon-Induced Field Desorption</i>	
By J.H. Block (With 15 Figures)	407
17.1 Introduction	407
17.2 Field Desorption and Thermal Desorption	408
17.3 Investigations in the Field Ion Microscope	412
17.4 Surface Reactions Investigated by Field Pulse Techniques and Time-of-Flight Mass Spectrometry	416
17.5 Field Ion Appearance Spectroscopy	419
17.6 Electron-Stimulated Field Desorption	420
17.7 Photon-Induced Field Desorption	424
17.7.1 Instrumental Development	424
17.7.2 Electronic Excitation of Adparticles	425
17.7.3 Thermal Activation of Adparticles	428
17.7.4 Surface Diffusion	429
17.7.5 Formation of Complex Ions and Cluster Ions	430
17.8 Summary	432
References	432
18. <i>Segregation and Ordering at Alloy Surfaces Studied by Low-Energy Ion Scattering</i>	
By T.M. Buck (With 14 Figures)	435
18.1 Introduction	435
18.2 Principles of Surface Segregation	436
18.2.1 General Remarks	436
18.2.2 Regular Solution Theory	436
18.2.3 Influence of Atom Size Difference	438
18.2.4 Miedema's Model	440
18.2.5 Bulk-Phase Diagram Rule	441

18.2.6 Long-Range Order and Segregation	442
18.3 Surface Composition Analysis	442
18.3.1 Low-Energy Ion Scattering	443
18.4 Experimental Results — LEIS	448
18.4.1 Polycrystalline Alloy Surfaces	448
18.4.2 Single Crystal Surfaces	451
18.5 Conclusions	461
References	462
19. <i>The Effects of Internal Surface Chemistry on Metallurgical Properties</i>	
By C.L. Briant (With 22 Figures)	465
19.1 Introduction	465
19.2 Segregation to Solid-Solid Interfaces	468
19.2.1 Grain Boundaries	468
19.2.2 Particle-Matrix Interfaces	472
19.2.3 Comparison with Surface Segregation	473
19.3 Applications	474
19.3.1 Temper Embrittlement of Steels	474
19.3.2 Ductile Fracture	478
19.3.3 Sensitization of Austenitic Stainless Steels	479
19.3.4 Grain Growth	481
19.4 Summary	483
