Preface . . . . .	v
<i>Chapter 1. An Introduction to Electron Energy-Loss Spectroscopy</i> . . . . .	1
1.1 Interaction of Fast Electrons with a Solid . . . . .	1
1.2. The Electron Energy-Loss Spectrum . . . . .	5
1.3. The Development of Experimental Techniques . . . . .	8
1.4. Comparison of Analytical Methods . . . . .	14
1.4.1. Ion-Beam Methods . . . . .	15
1.4.2. Incident Photons . . . . .	16
1.4.3. Electron-Beam Techniques . . . . .	17
1.5. Further Reading . . . . .	24
 <i>Chapter 2. Instrumentation for Energy-Loss Spectroscopy</i> . . . . .	 27
2.1. Energy-Analyzing and Energy-Selecting Systems . . . . .	27
2.1.1. The Magnetic-Prism Spectrometer . . . . .	28
2.1.2. Energy-Selecting Magnetic-Prism Devices . . . . .	30
2.1.3. The Wien Filter . . . . .	35
2.1.4. Cylindrical-Lens Analyzers . . . . .	37
2.1.5. Retarding-Field Analyzers . . . . .	41
2.1.6. Electron Monochromators . . . . .	44
2.2. The Magnetic-Prism Spectrometer . . . . .	47
2.2.1. First-Order Properties . . . . .	48
2.2.2. Higher-Order Focusing . . . . .	55
2.2.3. Design of an Aberration-Corrected Spectrometer . . . . .	57
2.2.4. Practical Considerations . . . . .	59
2.2.5. Alignment and Adjustment of the Spectrometer . . . . .	61
2.3. The Use of Prespectrometer Lenses . . . . .	68
2.3.1. Basic Principles . . . . .	68
2.3.2. CTEM with Projector Lens On . . . . .	73
2.3.3. CTEM with Projector Lens Off . . . . .	77
2.3.4. Spectrometer-Specimen Coupling in a High-Resolution STEM . . . . .	79

2.4. Recording the Energy-Loss Spectrum . . . . .	81
2.4.1. Serial Acquisition . . . . .	82
2.4.2. Electron Detectors for Serial Recording . . . . .	87
2.4.3. Scanning the Energy-Loss Spectrum . . . . .	92
2.4.4. Signal Processing and Storage . . . . .	95
2.4.5. Noise Performance of a Serial Detector . . . . .	99
2.4.6. Parallel-Recording Detectors . . . . .	102
2.4.7. Direct Exposure of a Diode-Array Detector . . . . .	108
2.4.8. Indirect Exposure of a Diode Array . . . . .	114
2.4.9. Removal of Diode-Array Artifacts . . . . .	116
2.5. Energy-Filtered Imaging . . . . .	118
2.5.1. Elemental Mapping . . . . .	122
2.5.2. Z-Contrast Imaging . . . . .	125
<i>Chapter 3. Electron Scattering Theory . . . . .</i>	<i>129</i>
3.1. Elastic Scattering . . . . .	129
3.1.1. General Formulas . . . . .	130
3.1.2. Atomic Models . . . . .	130
3.1.3. Diffraction Effects . . . . .	134
3.1.4. Electron Channeling . . . . .	135
3.1.5. Phonon Scattering . . . . .	137
3.2. Inelastic Scattering . . . . .	140
3.2.1. Atomic Models . . . . .	140
3.2.2. Bethe Theory . . . . .	143
3.2.3. Dielectric Formulation . . . . .	146
3.2.4. Solid-State Effects . . . . .	148
3.3. Excitation of Outer-Shell Electrons . . . . .	151
3.3.1. Volume Plasmons . . . . .	151
3.3.2. Single-Electron Excitation . . . . .	159
3.3.3. Excitons . . . . .	164
3.3.4. Radiation Losses . . . . .	167
3.3.5. Surface Plasmons . . . . .	169
3.3.6. Single, Plural, and Multiple Scattering . . . . .	180
3.4. Inner-Shell Excitation . . . . .	184
3.4.1. Generalized Oscillator Strength . . . . .	184
3.4.2. Kinematics of Scattering . . . . .	190
3.4.3. Ionization Cross Sections . . . . .	193
3.5. The Spectral Background to Inner-Shell Edges . . . . .	198
3.6. The Structure of Inner-Shell Edges . . . . .	203
3.6.1. Basic Edge Shapes . . . . .	203
3.6.2. Chemical Shifts in Threshold Energy . . . . .	212
3.6.3. Near-Edge Fine Structure (ELNES) . . . . .	215
3.6.4. Extended Energy-Loss Fine Structure (EXELFS) . . . . .	224

<b>Chapter 4. Quantitative Analysis of the Energy-Loss Spectrum</b>	<b>229</b>
4.1. Removal of Plural Scattering from the Low-Loss Region	229
4.1.1. Fourier-Log Deconvolution	229
4.1.2. Approximate Methods	238
4.1.3. Angular-Dependent Deconvolution	239
4.2. Kramers-Kronig Analysis	241
4.3. Removal of Plural Scattering from Inner-Shell Edges	246
4.3.1. Fourier-Log Deconvolution	246
4.3.2. Fourier-Ratio Method	247
4.3.3. Van Cittert's Method	252
4.3.4. Effect of a Collection Aperture	254
4.4. Background Fitting to Ionization Edges	255
4.4.1. Energy Dependence of the Background	255
4.4.2. Background-Fitting Procedures	256
4.4.3. Background-Subtraction Errors	259
4.5. Elemental Analysis Using Inner-Shell Edges	262
4.5.1. Basic Formulas	262
4.5.2. Correction for Incident-Beam Convergence	266
4.5.3. Effect of Sample Orientation	269
4.5.4. Effect of Specimen Thickness	270
4.5.5. Choice of Collection Angle	271
4.5.6. Choice of Integration and Fitting Regions	274
4.5.7. Microanalysis Software	274
4.5.8. Calculation of Partial Cross Sections	277
4.6. Analysis of Extended Energy-Loss Fine Structure	278
4.6.1. Spectrum Acquisition	278
4.6.2. Fourier-Transform Method of Data Analysis	279
4.6.3. Curve-Fitting Procedure	287
<b>Chapter 5. Applications of Energy-Loss Spectroscopy</b>	<b>291</b>
5.1. Measurement of Specimen Thickness	291
5.1.1. Measurement of Absolute Thickness	293
5.1.2. Sum-Rule Methods	295
5.2. Low-Loss Spectroscopy	298
5.2.1. Phase Identification	298
5.2.2. Measurement of Alloy Composition	299
5.2.3. Detection of Hydrogen and Helium	301
5.2.4. Zero-Loss Images	302
5.2.5. Z-contrast Images	303
5.2.6. Plasmon-Loss Images	304
5.3. Core-Loss Microanalysis	307
5.3.1. Choice of Specimen Thickness and Incident Energy	307
5.3.2. Specimen Preparation	308

5.3.3. Elemental Detection and Mapping . . . . .	312
5.3.4. Quantitative Microanalysis . . . . .	316
5.3.5. Measurement and Control of Radiation Damage . . . . .	322
5.4. Spatial Resolution and Elemental Detection Limits . . . . .	328
5.4.1. Electron-Optical Considerations . . . . .	328
5.4.2. Loss of Resolution due to Electron Scattering . . . . .	329
5.4.3. Statistical Limitations . . . . .	331
5.4.4. Localization of Inelastic Scattering . . . . .	335
5.5. Structural Information from EELS . . . . .	338
5.5.1. Low-Loss Fine Structure . . . . .	338
5.5.2. Orientation Dependence of Core-Loss Edges . . . . .	340
5.5.3. Core-Loss Diffraction Patterns . . . . .	344
5.5.4. Near-Edge Fine Structure . . . . .	345
5.5.5. Extended Fine Structure . . . . .	348
5.5.6. Electron-Compton Measurements . . . . .	350
<i>Appendix A. Relativistic Bethe Theory . . . . .</i>	<i>353</i>
<i>Appendix B. FORTRAN Programs . . . . .</i>	<i>357</i>
B.1. Hydrogenic K-shell Cross Sections . . . . .	357
B.2. Modified-Hydrogenic L-shell Cross Sections . . . . .	359
B.3. Incident-Convergence Correction . . . . .	361
B.4. Fourier-Log Deconvolution . . . . .	362
B.5. Kramers-Kronig Transformation . . . . .	367
<i>Appendix C. Plasmon Energies of Some Elements and Compounds</i>	<i>369</i>
<i>Appendix D. Inner-Shell Binding Energies and Edge Shapes . . .</i>	<i>371</i>
<i>Appendix E. Electron Wavelengths and Relativistic Factors; Fundamental Constants . . . . .</i>	<i>375</i>
<i>References . . . . .</i>	<i>377</i>
<i>Index . . . . .</i>	<i>407</i>
