Preface	xv
1. Introduction	
<i>B. Feuerbacher, B. Fitton, and R. F. Willis</i>	1
1.1 Development	4
1.2 What Does Photoemission Tell Us?	7
1.3 Parameters and Ranges	9
1.4 X-ray Versus Ultraviolet Photoemission Spectroscopy	13
1.5 Where Do We Stand?	15
PART I: PHOTOEMISSION THEORY	
2. The Photoelectron Excitation Process	
<i>N. W. Ashcroft</i>	21
2.1 Phenomenology	22
2.2 Linear and Quadratic Response	27
2.2.1 Internal Induced Currents: Linear Response	30
2.2.2 External Induced Currents: Photoemission	31
2.2.3 Averaging the Linear Response	32
2.2.4 Averaging the Quadratic Response	33
2.2.5 Relation between Internal and External Currents	34
2.3 Photoemission in the Independent-particle Approximation	34
2.3.1 Linear Response: Independent Particles	35
2.3.2 Quadratic Response: Independent Particles	36
2.3.3 Response Near a Surface	38
2.4 Surface and Volume Effects: Connection with Experiment	40
3. Surface Photoexcitation	
<i>K. L. Kliewer</i>	45
3.1 The Nature of the Surface Photoeffect	45
3.2 The Electron Gas	49
3.2.1 Non-locality and the Specular Scattering Model	50
3.2.2 Photoemission with the Specular Scattering Model	57
3.2.3 Summary of the Surface Photoeffect with the Specular Scattering Model	68

3.2.4 Alternative Electron Gas Models	69
3.2.5 Surface Photoeffect for Normally Incident Light	73
3.3 Beyond the Electron Gas	75
3.3.1 General Considerations and Metals	75
3.3.2 Semiconductors and Insulators	78
3.3.3 Observing the Surface Photoeffect	78
3.3.4 The Role of the Plasmon	81
3.3.5 Surface Roughness	82
3.3.6 Surface States and Adsorbate Effects	83
4. Electron Emission from Solids	
<i>J. B. Pendry</i>	87
4.1 The Photon Field	89
4.2 The Model Hamiltonian	91
4.3 Electron and Hole Lifetimes	94
4.4 Nature of the Final State	99
4.5 Photoemission Formulae	101
4.6 Photoemission Calculations	104
5. Many-body Effects in Photoemission	
<i>J. W. Gadzuk</i>	111
5.1 Time Scales	114
5.2 Theory	116
5.2.1 Photoionization	116
5.2.2 The Independent Boson Model	119
5.2.3 Hole Switching	122
5.2.4 Hole Decay	124
5.2.5 Sum Rules	126
5.3 Applications	126
5.3.1 Volume Relaxation	126
5.3.2 Surface Relaxation	129
5.4 Once Over Lightly	132
5.4.1 Extrinsic Plasmon Satellites	132
5.4.2 Experiment	133
5.4.3 Other Theory	134
5.5 Summary	134
6. Adsorbate Induced Photoemission	
<i>G. Doyen and T. B. Grimley</i>	137
6.1 Single-hole Excitations	137
6.2 Overcomplete Basis Sets	139
6.3 Photoemission	140
6.3.1 Approximations to $ N; F^-\rangle$	141
6.4 The Model Hamiltonian	143
6.4.1 Separation of the s-band	144

6.4.2 Constructing the Surface Molecule	145
6.4.3 The Surface Plasmon	145
6.5 Diagonalization of the Surface Molecule Hamiltonian	146
6.5.1 Exact Solution	146
6.5.2 Hartree–Fock Solution for the Ionized Surface Molecule	150
6.5.3 Koopmans' Approximation	151
6.6 Change of the Hole Excitation Spectrum through Absorption	151
6.7 Transition Rate for Photoelectrons	153
6.8 Results	155
6.8.1 The Single-hole Excitation Spectrum without Plasmon Coupling	156
6.8.2 Plasmon Effects on the Hole Excitation Spectrum	160
6.8.3 Angular Dependence	161
6.8.4 Relaxation and Correlation Effects	161
7. Angle-resolved Photoemission from Adsorbates	
<i>A. Liebsch</i>	167
7.1 Identification of Adsorbate Levels	168
7.1.1 The Cross Section	168
7.1.2 Angular Dependence: Atoms	170
7.1.3 Angular Dependence: Oriented Molecules	173
7.1.4 Polarization Dependence: Selection Rules	174
7.2 Identification of Adsorption Geometry	176
7.2.1 Initial State	176
7.2.2 Final State	178
7.3 Bonding Orbitals: Emission from Ordered Overlayers	179
7.3.1 Formal Procedure	180
7.3.2 Application to Oxygen on Ni(001)	182
7.4 Conclusion	187
PART II: THEORY OF ELECTRON STATES AT SURFACES	
8. Electron States at Clean Surfaces	
<i>F. Forstmann</i>	193
8.1 The Local Density of States	194
8.1.1 Localization	196
8.2 The Existence of Surface States	198
8.3 Methods of Surface State Calculations	202
8.3.1 The Problem of Self-consistency	202
8.3.2 Self-consistent Pseudopotential Calculations	203
8.3.3 The Tight-binding Method	206
8.3.4 Other Methods for the Treatment of Electrons at Surfaces .	210
8.4 Results of Surface State Calculations	210
8.4.1 The Si(111) Surface	210
8.4.2 The Si(100) Surface	216

8.4.3 The (110) Cleavage Surface of GaAs	217
8.4.4 Simple Metals	218
8.4.5 d-Band Metals	220
8.5 Conclusions	223
 9. Adsorbate Induced Electronic States	
<i>B. I. Lundqvist, H. Hjelmberg, and O. Gunnarsson</i>	227
9.1 Chemisorption	228
9.2 Distribution of Energy Levels	229
9.2.1 Spectral Changes upon Adsorption	229
9.2.2 Newns-Anderson Model	231
9.2.3 Extra Structure Due to Correlation	238
9.2.4 Improved Models	241
9.2.5 Spectral Functions and Effective Potentials	242
9.3 Electron Distribution in Space	243
9.3.1 Kohn-Sham Scheme	244
9.3.2 <i>A priori</i> Type Computational Schemes	247
9.3.3 Charge Contraction and Binding	255
9.3.4 Screening and Friedel Oscillations	256
9.3.5 Charge Transfer	256
9.4 Electron Distribution in Space and Energy	259
9.4.1 Adsorbate Induced Local Density of States	261
9.4.2 Size of Adsorbate-Substrate Coupling	263
9.4.3 Adsorbate Effects on Surface States	265
9.5 Potential Energy Curves	266
9.6 Recent Calculations on Explicit Systems	271
9.7 Concluding Remarks	274

PART III: EXPERIMENTAL RESULTS

 10. Photoemission from Metals	
<i>R. F. Willis and B. Feuerbacher</i>	281
10.1 Perspective	282
10.2 Final States: The Inelastic Spectrum	284
10.2.1 Emission from Bulk States	286
10.2.2 The Role of the Surface	288
10.2.3 Surface Emission	290
10.3 Optical Excitation	292
10.3.1 Selection Rules	292
10.3.2 Surface Optical Effects	296
10.3.3 Spectral Broadening Effects	299
10.4 Initial States: The Elastic Spectrum	302
10.4.1 Distinguishing the 'Bulk' States	302
10.4.2 Distinguishing the 'Surface' States	305
10.4.3 Many-particle Aspects	308

10.4.4 The Spectral Density of States in the Surface	310
10.5 Summary	311
11. Photoemission from Semiconductor Surfaces	
<i>W. Gudat and D. E. Eastman</i>	315
11.1 Experimental Techniques	316
11.2 Intrinsic Surface States on Group IV Semiconductors	318
11.2.1 Surface Geometry and Electronic Structure	318
11.2.2 Intrinsic Surface States on Silicon	322
11.2.3 Intrinsic Surface States on Germanium	328
11.3 Intrinsic Surface States on Compound Semiconductors	330
11.3.1 Surface Geometry and Electronic Structure	330
11.3.2 Occupied Surface States on GaAs (110)	334
11.3.3 Empty Surface States on GaAs (110)	338
11.3.4 Trends and Correlations on Surface States of III-V Semiconductors	342
11.4 Chemisorption and Extrinsic Effects on Semiconductor Surfaces .	345
11.5 Conclusions	348
12. Valence Photoemission from Adsorbates	
<i>T. Gustafsson and E. W. Plummer</i>	353
12.1 Single-particle versus Many-electron Effects	354
12.1.1 Relaxation Effects in the Free Molecule	355
12.1.2 Extramolecular Relaxation	357
12.1.3 Bonding Shifts	359
12.2 Photoionization Cross Sections	360
12.2.1 Molecular Photoionization Cross Sections	361
12.2.2 Cross Sections for Chemisorbed Molecules	362
12.3 Surface Sensitivity and \mathcal{A} -Vector Effects	365
12.3.1 The $\nabla \mathbf{A}$ Term	365
12.3.2 Macroscopic Considerations	365
12.3.3 Microscopic Effects	368
12.4 Angle Resolved Photoemission and the Orientation of Molecules	371
12.5 Fingerprint Techniques	372
12.6 Review of Other Systems	374
12.6.1 Atoms	374
12.6.2 Molecules	374
12.7 What Have We Learned?	376
13. Core Level Photoemission from Adsorption Layers	
<i>D. Menzel</i>	381
13.1 Experimental Considerations	382
13.1.1 Definition of Kinetic and Binding Energies	382
13.1.2 Surface Sensitivity	283
13.1.3 Photon Sources	384

13.1.4 Measuring Times and Vacuum Requirements	384
13.2 XPS Studies of Core Levels of Adsorbates and Substrates in Adsorption Systems	385
13.2.1 Elemental Analysis by Core Level XPS	385
13.2.2 Characterization of Surface Species by Core Level Binding Energies	389
13.2.3 Core level Satellites	399
13.3 XAES Studies of Surface Species	401
13.4 Some Applications: 'Fingerprinting' of Surface Species	403
13.5 Conclusions and Outlook	405
14. Directional Photoemission from Two-dimensional Systems	
<i>N. V. Smith and P. K. Larsen</i>	409
14.1 Basics of Directional Photoemission	410
14.2 Layer Compounds as Two-dimensional Systems	412
14.2.1 Properties of Layer Compounds	412
14.2.2 Normal Emission	415
14.3 Experimental Configurations	416
14.4 InSe: a Detailed Study	417
14.5 Surface Systems	422
14.5.1 Surface States on Si (111)	422
14.5.2 H ₂ on W(100)	425
14.6 Photoelectron Diffraction	429
14.6.1 Emission Intensities	429
14.6.2 Core Level Photoemission	431
14.6.3 Surface Structure Determination	434
15. Photoemission of Spin Polarized Electrons	
<i>S. F. Alvarado, W. Eib, F. Meier, H. C. Siegmann, and P. Zürcher</i>	437
15.1 Basic Principles	438
15.2 Experimental	439
15.3 Magnetic Materials	442
15.3.1 Rare Earth Materials	442
15.3.2 3d-Semimetals and Semiconductors	449
15.3.3 3d-Metals	457
15.4 Non-magnetic Solids	460
15.5 Conclusions and Outlook	463
16. Interfacial Photoemission	
<i>J. K. Sass and H. Gerischer</i>	469
16.1 General Aspects	470
16.1.1 The Barrier and Electron States Outside the Metal	470
16.1.2 The Interfacial Current Efficiency	472
16.1.3 Photoelectrons – Photoholes	473
16.2 The Metal–Electrolyte Contact	474

16.2.1 The Interface as Part of a Galvanic Cell	475
16.2.2 Electron Emission Experiments and Results	478
16.2.3 Photohole Reactions	482
16.3 The Metal–Insulator Contact	484
16.3.1 The Diffusion Model	485
16.3.2 Electron Emission into Liquid Insulators	487
16.3.3 Concluding Remarks	489
16.4 Excitation Studies with Polarized Light	490
16.4.1 Theoretical Aspects	490
16.4.2 Experimental Observations of Vectorial Photoeffects . .	495
16.4.3 Metal Adsorbates and Thin Films	496
17. Synchrotron Radiation as a Source for Photoemission	
<i>C. Kunz</i>	501
17.1 Properties of Synchrotron Radiation	502
17.1.1 Calculation of Properties	502
17.1.2 Time Structure	506
17.1.3 Comparison with other Sources	507
17.2 Overview of Synchrotron Sources	509
17.3 Arrangement of Experiments	512
17.4 Monochromators	514
17.5 Techniques of Photoemission Spectroscopy of Surfaces	518
17.5.1 Energy Distribution Spectra	518
17.5.2 Yield Spectroscopy	518
17.5.3 Partial Yield Spectroscopy	521
17.5.4 Constant Initial State Spectroscopy	522
17.5.5 Primary and Secondary Processes	522
17.5.6 Angle Dependent CFS	524
17.6 Conclusion	524
Index	529
