

## CONTENTS

Preface	v
List of Contributors	xv
<b>1. THE THEORY OF CERAMIC SURFACES</b>	<b>1</b>
A. M. Stoneham and P.W. Tasker	
1.1 Real surfaces and ideal surfaces	1
1.1.1 Introduction	1
1.1.2 Theoretical methods	2
1.1.3 Structure and stability	3
1.1.4 Surface energy and morphology	5
1.2 Defects on oxide surfaces	6
1.2.1 Signals versus models	6
1.2.2 Surface signals and near-surface or bulk signals	6
1.2.3 Simple intrinsic defects	7
1.2.4 Intrinsic defects with electronic structure	7
1.2.4.1 Anion vacancy centers	7
1.2.4.2 Cation vacancy centers	8
1.2.4.3 Low coordinated oxygen	9
1.2.4.4 Surface excitons	9
1.2.5 Adsorbed species	9
1.2.5.1 Adsorbed oxygen	9
1.2.5.2 Adsorbed metal atoms	9
1.2.6 Hydrogen on oxide surfaces	9
1.2.7 Near-surface defects	10
1.3 Impurity segregation	10
1.3.1 Equilibrium surface segregation	10
1.3.2 Vibrations, structure and entropy	13
1.4 Metal-oxide adhesion	15
1.4.1 Metal-oxide adhesion: general	15
1.4.2 Image interactions	17
1.4.3 Consequences for adhesion	18
1.4.4 Consequences for other phenomena	20
References	20
<b>2. ELECTRONIC AND GEOMETRIC STRUCTURE OF DEFECTS ON OXIDES AND THEIR ROLE IN CHEMISORPTION</b>	
V. E. Henrich	
2.1 Introduction	23
2.2 Experimental techniques used to study surface defects	24
2.2.1 Low energy electron diffraction (LEED)	24
2.2.2 Photoelectron spectroscopy	25
2.2.3 Inverse photoelectron spectroscopy	25
2.2.4 Electron energy loss spectroscopy	26
2.2.5 Auger electron spectroscopy	27
2.2.6 Scanning tunneling microscopy	27
2.3 Geometric structure of oxide surfaces and defects	27

2.3.1	Rocksalt	28
2.3.2	Perovskite	30
2.3.3	Rutile	31
2.3.4	Corundum	33
2.3.5	Wurtzite	34
2.3.6	Summary	35
2.4	Electronic structure of surface defects	36
2.4.1	Nearly perfect surfaces	36
2.4.2	Steps and extended surface defects	39
2.4.3	Point defects	40
2.5	Chemisorption at defect sites on oxides	46
2.5.1	Nearly perfect surfaces of maximal valency oxides	46
2.5.2	Nearly perfect suboxide surfaces	47
2.5.3	Point defects	50
2.6	Summary	57
	References	57
3.	SELECTED EXPERIMENTAL METHODS IN THE CHARACTERIZATION OF OXIDE SURFACES	61
	W. Hirschwald	
3.1	Introduction	61
3.2	General consideration concerning the experimental set-up	63
3.3	Structure of surfaces	66
3.3.1	Introduction	66
3.3.2	Scanning tunneling microscopy (STM)	67
3.3.3	Field emission and field ion microscopy (FEM, FIM)	69
3.3.4	Electron microscopies (TEM, SEM)	73
3.3.5	Low energy electron diffraction (LEED)	77
3.3.6	Atomic beam scattering and diffraction	86
3.3.7	Ion scattering	89
3.3.8	Surface enhanced X-ray absorption fine structure (SEXAFS)	93
3.3.9	X-ray absorption near-edge structure (XANES)	97
3.3.10	Surface extended energy loss fine structure (SEELFS)	98
3.3.11	Angle-resolved photoemission (ARPES)	98
3.4	Chemical composition of surfaces	101
3.4.1	Introduction	101
3.4.2	Photoelectron and Auger electron spectroscopy (PES, AES)	107
3.4.3	Quantification of XPS and AES	124
3.4.4	Depth profiling	125
3.4.5	Radiation damage	130
3.4.6	Scanning Auger microprobe/microscopy (SAM)	131
3.4.7	Secondary ion mass spectrometry (SIMS) and fast atom bombardment mass spectrometry (FABMS)	133
3.4.8	Ion scattering spectroscopy (ISS)	142
3.4.8.1	LEIS	142
3.4.8.2	HEIS (RBS)	148
3.5	Energetics of Surfaces	155
3.5.1	Electrons at surfaces	155
3.5.1.1	Photoelectron spectroscopy	155
3.5.1.2	Electron energy loss spectroscopy	160
3.5.1.3	Tunneling spectroscopy	161
3.5.2	Vibrations at surfaces	165
3.5.2.1	Inelastic electron tunneling spectroscopy (IETS)	165
3.5.2.2	High resolution electron energy loss spectroscopy (HREELS)	166
3.6.	Concluding remarks	171
	References	173

<b>4. SURFACE REACTIVITY OF OXIDE MATERIALS IN OXIDATION-REDUCTION ENVIRONMENT</b>	<b>189</b>
T. Seiyama	
4.1 Introduction	189
4.2 The stability of metal oxides under the ambient atmosphere	189
4.2.1 Thermodynamic stability of single metal oxides	189
4.2.2 Thermodynamic stability of mixed metal oxides	191
4.2.3 Anomalous redox properties of metal oxide surfaces	193
4.3 Reduction-oxidation behaviour of metal oxides and their surface structures	194
4.3.1 Adsorption of hydrogen on oxide surfaces	194
4.3.2 Reduction behaviour of metal oxide surfaces	197
4.3.3 Effect of surface structure at well-defined crystallographic planes on the reactivity of oxides	200
4.3.3.1 The difference in adsorption property and reactivity among crystallographic planes in ZnO single crystal	200
4.3.3.2 Adsorption on TiO <sub>2</sub> (110) surface	201
4.3.3.3 Shape dependent reactivity of MoO <sub>3</sub> in oxide catalysts	202
4.3.4 Interaction of metals or metal oxides with support oxides	203
4.4 Examples of reduction-oxidation properties of some oxide systems	205
4.4.1 Correlation of redox reaction and crystallographic shear plane in WO <sub>3</sub> - type oxides	205
4.4.2 Modification of redox reactivity in mixed oxide systems	207
4.4.2.1 Change of surface structure of Cu-Mo oxide	207
4.4.2.2 Oxygen-sorptive properties of perovskite-type oxides	208
4.4.3 Redox properties of heteropoly compounds in oxidation catalysis	210
4.4.4 Changes in surface composition of mixed oxides	212
4.4.4.1 Mixed oxide system Fe <sub>2</sub> O <sub>3</sub> -Sb <sub>2</sub> O <sub>4</sub>	212
4.4.4.2 Perovskite-type oxide	214
References	215
<b>5. METAL OXIDE OVERLAYERS AND OXYGEN INDUCED CHEMICAL REACTIVITY STUDIED BY PHOTOELECTRON SPECTROSCOPY</b>	<b>219</b>
M.W. Roberts	
5.1 Introduction	219
5.2 The photoelectron spectroscopic approach	221
5.3 Oxygen chemisorption at metal surfaces	222
5.3.1 Nickel	223
5.3.2 Titanium	228
5.3.3 Bismuth	229
5.3.4 Copper	230
5.3.5 Manganese	231
5.3.6 Iron	232
5.3.7 Germanium	232
5.3.8 Aluminium	233
5.4 Activation of molecules by surface oxygen and oxide overlayers at metal surfaces	235
5.4.1 Oxidation induced chemisorptive replacement reactions	235
5.4.2 Surface oxide - water vapour interaction	237
5.5 Surface oxygen transients in metal oxidation and heterogeneous catalysis	240
5.6 Concluding remarks	243
References	244
<b>6. SURFACE SEGREGATION IN METAL OXIDES</b>	<b>247</b>
P. Wynblatt and R.C. Mc Cune	
6.1 Introduction	247

6.2 Concepts for the interpretation of segregation phenomena	247
6.2.1 The Gibbsian framework	248
6.2.2 Regular solution models	250
6.2.2.1 Application to oxides with isovalent solutes	250
6.2.2.2 Application to oxide solutions with aliovalent solutes	254
6.2.2.3 Coupling of elastic and electrostatic interactions	258
6.3 Experimental considerations in the study of solute segregation at surfaces	259
6.3.1 Oxide solid solutions	259
6.3.2 Achieving equilibrium	260
6.3.2.1 Atmosphere and volatilization	260
6.3.2.2 Segregation kinetics	261
6.3.3 Measurement of solute segregation	262
6.3.3.1 Indirect assessment of surface solute enrichment	262
6.3.3.2 Surface spectroscopic techniques	263
6.4 Current state of understanding	267
6.4.1 Isovalent solute systems	269
6.4.2 Aliovalent solute segregation	270
6.4.3 Other systems	273
6.4.4 Concluding remarks	274
References	275
7. WORK FUNCTION OF OXIDE CERAMIC MATERIALS	281
J. Nowotny and M. Sloma	
7.1 Introduction	281
7.2 Definition of the work function	282
7.3 The dynamic condenser method	285
7.3.1 The vibrating system	289
7.3.2 The reference level	291
7.4 Oxidation of metals	292
7.4.1 Effect of crystallographic orientation on surface reactivity	292
7.4.2 Oxidation mechanism	294
7.5 The metal oxide-oxygen system	298
7.5.1 Chemisorption equilibria	300
7.5.2 Near-surface equilibria	304
7.5.3 Defect equilibria	309
7.5.3.1 Undoped and Y-doped (stabilized) $ZrO_2$	310
7.5.3.2 Undoped and Cr-doped nickel oxide	314
7.6 Phase transitions in oxide systems	318
7.7 Solid state reactions	321
7.8 Segregation in oxide crystals	323
7.9 Work function of oxide catalysts	327
7.9.1 Work function of catalysts in reactive atmospheres	328
7.9.2 Electronic factor in catalysis	332
7.10 Conclusions	336
References	337
8. PHOTOEFFECTS ON METAL OXIDE POWDERS	345
J. Cunningham	
8.1 Introduction	345
8.2 Surface sensitive features in the electronic spectroscopy of undoped metal oxides	346
8.2.1 Pre-1981 concepts	346
8.2.2 Recent developments in surface sensitive electronic spectroscopy of metal oxides in the UV/visible	355
8.2.2.1 Alkaline earth oxides	356
8.2.2.2 Alternative views as to the influence of surface upon excitons	361

8.2.2.3 Titanium oxide	364
8.3 Interaction of probe molecules with metal oxides in ground and electronically excited states	367
8.3.1 Mechanistic concepts	367
8.3.1.1 Metal oxide-adsorbate interactions in ground electronic states	367
8.3.1.2 Metal oxide-adsorbate interactions in an electronically excited state	370
8.3.1.3 Photophysical, photochemical and photocatalytic processes	374
8.3.2 Adsorbate-initiated photoeffects: recent developments	380
8.3.2.1 Photophysical processes	380
8.3.2.2 Photochemical (and associated photophysical) processes	384
8.3.3 Adsorbent-initiated photoeffects	387
8.3.3.1 Photophysical effects	388
8.3.3.2 Energy-transfer aspects	392
8.3.3.3 Photochemical processes	393
References	405
9. THE ROLE OF THE SURFACE ON BULK PHYSICAL PROPERTIES OF GLASSES	413
A.A. Kruger	
9.1 Introduction	413
9.2 Composition and structure	414
9.3 Surface structure	417
9.4 Leaching and corrosion	427
9.5 Strength	431
9.6 Conclusion	435
References	436
10. SEGREGATION IN OXIDE SURFACES; SOLID ELECTROLYTES AND MIXED CONDUCTORS	449
A.J. Burggraaf and A.J.A. Winnubst	
10.1 Introduction	449
10.1.1 Modes of compositional changes near interfaces	450
10.2 Experimental methods and limitations	451
10.3 Driving forces and important effects and aspects	454
10.3.1 Theories and models	454
10.3.1.1 Surface tension	455
10.3.1.2 Strain relaxation	456
10.3.1.3 Electrostatic potential and charge compensation	457
10.3.2.1 Effects of gas phase composition and surface states	460
10.3.2.2 Effects of strain energy	462
10.3.2.3 Effects of cooling rates	462
10.3.2.4 Grain boundary versus surface segregation	462
10.4 Chemical composition and some properties of typical compounds	463
10.4.1 Ionically conducting oxides	463
10.4.2 Semi and mixed conducting oxides	467
10.4.3 Electrically insulating oxides	471
10.5 General segregation patterns and conclusions	473
References	474
11. GRAIN SIZE AND GRAIN BOUNDARY EFFECTS IN PASSIVE ELECTRONIC COMPONENTS	479
D. Hennings	
11.1 Introduction	479
11.2 Dielectric barium titanate ceramics	481
11.2.1 Ferroelectric domains in BaTiO <sub>3</sub> ceramics	482

11.2.2	The grain size dependence of the permittivity	485
11.2.3	Dielectric materials with core - shell structure	486
11.3	Semiconducting BaTiO <sub>3</sub> and SrTiO <sub>3</sub>	487
11.3.1	The chemistry of point defects in BaTiO <sub>3</sub>	487
11.3.2	Diffusion of lattice defects in BaTiO <sub>3</sub>	491
11.4	Nonlinear resistors and barrier layer capacitors	493
11.4.1	PTC thermistors	495
11.4.2	SrTiO <sub>3</sub> varistors	497
11.4.3	SrTiO <sub>3</sub> boundary layer capacitors	498
11.5	Summary	502
	References	503
12.	REACTIONS AT PHASE BOUNDARIES DURING METAL/CERAMIC BONDING	507
	H.J. de Bruin	
12.1	Introduction	507
12.2	Methods for bonding metals to ceramics	512
12.2.1	Special brazing alloys	512
12.2.2	Metalizing a ceramic surface	512
12.2.3	Special glasses	513
12.2.4	Reaction bonding	514
12.3	Phase relations in metal ceramic bonding processes	515
12.4	Mechanism for reaction bonding of oxide ceramics	519
12.5	Conclusion	523
	References	524
13.	OXIDE SURFACES IN SOLUTION	527
	R.L. Segall, R.St.C. Smart and P.S. Turner	
13.1	Introduction	527
13.2	The role of the solid	533
13.2.1	Ionic oxides	535
13.2.1.1	The fundamental characteristics of ionic oxide dissolution	535
13.2.1.2	Early work on advanced stage of dissolution	535
13.2.1.3	The initial stage of dissolution	536
13.2.1.4	Relevant oxide/gas reactions	536
13.2.1.5	Initial dissolution kinetics of MgO	537
13.2.1.6	Advanced dissolution kinetics of MgO	539
13.2.1.7	Results for other ionic oxides	542
13.2.2	Semiconducting oxides	542
13.2.2.1	Classification of semiconducting oxides	542
13.2.2.2	The p-type oxides	543
13.2.2.3	Initial dissolution kinetics of p-type oxides	543
13.2.2.4	Advanced stages of dissolution of p-type oxides	544
13.2.2.5	The n-type oxides	547
13.2.3	Covalent insulating oxides	548
13.3	Theories of oxide dissolution kinetics	549
13.3.1	Diffusion control of ion transfer in ionic oxides (Jaenicke)	550
13.3.2	Ion transfer in ionic crystals (Engell)	551
13.3.3	Ion transfer control in ionic oxides - pH dependence (Vermilyea)	552
13.3.4	Ion transfer in ionic oxides - potential determination (Diggle)	555
13.3.5	The electron-proton theory of potential determination (Gorichev)	556
13.3.6	Irreversible thermodynamics of reaction rate (Prigogine)	558
13.3.7	Semiconductor theory of oxidation and reduction	559

13.4 The role of the solution	560
13.4.1 Concentration of reactants and products	560
13.4.2 pH of the solution	561
13.4.3 Redox potential	563
13.4.4 Complexing agents	564
13.4.5 Surface active agents	566
13.4.6 Temperature	566
13.5 Conclusions	566
13.5.1 Ionic oxides	567
13.5.2 Fast-dissolving semiconducting oxides	568
13.5.3 Slow-dissolving semiconducting oxides	570
13.5.4 Covalent insulating oxides	571
References	571
 14. METALS ON OXIDES: FORMATION, CHARACTERIZATION AND PROPERTIES	 577
L.C. Dufour and M. Perderau	
14.1 Introduction and limitation of the subject	577
14.1.1 Some definitions: from supported metal clusters to thick metallic films	577
14.1.2 Limitations of the present review	579
14.2 Specific techniques to investigate the properties of metals on oxides	580
14.2.1 General problems	581
14.2.2 Some selected examples of methods to study small particles and thin films of metals on oxides	582
14.2.2.1 Large-area techniques	582
14.2.2.2 High spatial resolution techniques	584
14.3 The formation of the metal oxide interface	585
14.3.1 Adsorption-desorption processes at oxide surfaces	587
14.3.2 Surface migration of adsorbed species	588
14.3.3 Nucleation and growth of metals on oxides	588
14.3.3.1 General considerations	588
14.3.3.2 Quality of the metal-oxide interface	590
14.3.3.3 Some selected examples of growth modes	592
14.4 Some physico-chemical properties of metals on oxides	594
14.4.1 Static properties related to size	594
14.4.1.1 Electronic properties of small metallic particles on oxides	594
14.4.1.2 Structural and morphological properties of small particles on oxides	595
14.4.2 Dynamic properties and thermal stability	597
14.5 Conclusion	598
References	601
 15. ELECTRONIC STRUCTURE AND TRANSPORT PROPERTIES OF INTERFACES IN METAL OXIDES	 611
M.H. Sukkar and H.L. Tuller	
15.1 Introduction	611
15.2 Background	612
15.2.1 Transport and bulk defect equilibria in semiconducting metal oxides	612
15.2.1 (i) Intrinsic effects	613
15.2.1 (ii) Extrinsic effects	614
15.2.1 (iii) Oxidation/reduction processes	615
15.2.2 Semiconductor interfaces	617
15.3 Grain boundary phenomena	619
15.3.1 Background	619
15.3.2 Grain boundary junction electronic structure	620

15.3.3 Electronic structure	622
15.4 Grain boundary controlled ceramic devices	623
15.4.1 ZnO varistors	623
15.4.2 Electronic transport	626
15.4.3 The nature of ZnO varistor grain boundaries	629
15.4.4 Defect structure of ZnO varistor materials	631
15.5 BaTiO <sub>3</sub> PTC thermistors	638
15.5.1 PTC device chemistry	641
15.5.2 Preferential grain boundary oxidation	642
15.6 Ferrites	643
15.6.1 Introduction	643
15.6.2 Grain boundary effect in magnetic ferrites	643
15.6.3 Impurity effects	644
15.6.4 Grain boundary oxidation	645
15.7 Metal-metal oxide interfaces	647
15.7.1 Background	647
15.7.2 Electronic transport in nonideal Schottky barriers- interfacial layer and surface state effects	650
15.7.3 Literature review	653
15.7.3.1 ZnO/metal contacts	653
15.7.3.2 Titanate/metal contacts	655
15.7.3.3 Metal-support catalysts	656
15.8 Summary and conclusion	656
References	657
16. HIGH T <sub>c</sub> OXIDE SUPERCONDUCTORS. POSSIBLE EFFECT OF INTERFACES	669
J. Nowotny, M. Rekas, D.D. Sarma and W. Weppner	
16.1 Introduction	669
16.2 A short review on structure and composition	670
16.3 Phase relations and non-stoichiometry of high T <sub>c</sub> oxide superconductors	676
16.3.1 Conditions of sintering	780
16.3.2 Conditions of cooling	681
16.4 Effect of microstructure	682
16.5 Single crystals	685
16.6 Thin films	687
16.7 Surface vs. bulk	688
16.8 Aging	689
16.9 Concluding remarks	690
References	692
Subject Index	701
Formula index	709
