

CONTENTS

Preface	vii
1. Surface Analysis: Prologue and Perspective	1
C. B. Duke	
2. Ultra-High Vacuum Techniques of Surface Characterization	13
C. R. Brundle	
3. Analysis of Surfaces and Thin Films by IR, Raman, and Optical Spectroscopy	33
D. L. Allara	
4. Near Surface Analysis with Energetic Ion Beams	49
C. R. Gossett	
5. Characterization of Solid Surfaces by Wet Chemical Techniques ...	69
F. M. Fowkes	
6. Prospects in the Analysis of Chemically Modified Electrodes	89
D. H. Karweik, C. W. Miller, M. D. Porter, and T. Kuwana	
7. Applications of Ion Beam Methods to Characterization of Adhesive Bonding Materials	121
W. L. Baun	
8. Surface Analysis of Fibers and Polymers by X-Ray Photoelectron Spectroscopy: Industrial Applications	143
M. M. Millard	
9. Surface Analysis of Glasses	203
L. L. Hench and D. E. Clark	
10. Problems and Prospects of Instrumental Surface Analysis of Electronic Materials and Processes	229
M. A. Ryan and G. E. McGuire	
11. Use of Surface Analytical Techniques to Examine Metal Corrosion Problems	251
D. R. Baer and M. T. Thomas	
12. Surface Characterization in Mineral Processing	283
D. W. Fuerstenau and S. Chander	
13. Particle Charge in Nonaqueous Dispersions	313
M. L. Hair and D. Landheer	
14. Surface Analysis and Solar Energy Materials	327
A. W. Czanderna	

15. Applications of Surface Analysis in the Nuclear Industry	345
N. S. McIntyre	
16. The Surface Chemistry of First-Wall Materials in Magnetic Fusion Devices	367
H. F. Dylla	
17. Application of Thermal Analysis and Photoelectron Spectroscopy for the Characterization of Particulate Matter	397
R. L. Dod and T. Novakov	
Index	411
