|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Introduction</b>                                                                                                                                                                                      | 1   |
| <b>Chemical Analysis of Surfaces—R. L. PARK</b>                                                                                                                                                          | 3   |
| <b>Some Quantitative Aspects of the X-Ray Photoelectron Spectroscopy<br/>Analysis of Metal and Oxide Surfaces—N. S. MCINTYRE AND<br/>M. G. COOK</b>                                                      | 18  |
| <b>ESCA Studies of Nickel-Boron Electroless Coatings—R. S. SWINGLE, II,<br/>C. R. GINNARD, AND G. I. MADDEN</b>                                                                                          | 28  |
| <b>Composition of Protective Films Formed on Iron and Stainless<br/>Steels—J. B. LUMSDEN AND R. W. STAEHLE</b>                                                                                           | 39  |
| <b>Quantitative Auger Electron Spectroscopy with Elemental Sensitivity<br/>Factors—L. E. DAVIS AND A. JOSHI</b>                                                                                          | 52  |
| <b>Application of Auger Electron Spectroscopy to the Study of Embrittlement<br/>in Nickel—J. M. WALSH AND N. P. ANDERSON</b>                                                                             | 58  |
| <b>Determination of the Low Temperature Diffusion of Chromium Through<br/>Gold Films by Ion Scattering Spectroscopy and Auger Electron<br/>Spectroscopy—G. C. NELSON AND P. H. HOLLOWAY</b>              | 68  |
| <b>Comparison of Evaporated Surface Coatings Using the Ion Scattering<br/>Spectrometer and the Auger Electron Spectrometer—W. D. BINGLE</b>                                                              | 79  |
| <b>Chemistry of Metal and Alloy Adherends by Secondary Ion Mass<br/>Spectroscopy, Ion Scattering Spectroscopy, and Auger Electron<br/>Spectroscopy—W. L. BAUN, N. T. MCDEVITT, AND J. S.<br/>SOLOMON</b> | 86  |
| <b>Errors Observed in Quantitative Ion Microprobe Analysis—D. E.<br/>NEWBURY, K. F. J. HEINRICH, AND R. L. MYKLEBUST</b>                                                                                 | 101 |
| <b>Small Area Depth Profiling with the Ion Microprobe—T. A. WHATLEY,<br/>D. J. COMAFORD, JOHN COLBY, AND PAUL MILLER</b>                                                                                 | 114 |
| <b>Analysis of Solids Using A Quadrupole Mass Filter—R. D. FRALICK,<br/>H. J. RODEN, AND J. R. HINTHORNE</b>                                                                                             | 126 |
| <b>Summary</b>                                                                                                                                                                                           | 141 |
| <b>Index</b>                                                                                                                                                                                             | 145 |
